REQUEST FOR PROPOSAL
B25/26-11 DSA Approved Inspector of Record
For
Las Positas College Building 1500 STEAM Inc. 2 & Renovation to B1800 STEM

INTRODUCTION

The Chabot - Las Positas Community College District is soliciting from interested and qualified Consultants to provide DSA Approved Inspector of Record Services (IOR) during the construction of the **Las Positas College Building 1500 STEAM Inc. 2 & Renovation to B1800 STEM** Project.

The new STEAM and B1800 Renovation will be developed adjacent to the existing Buildings 1900 ITS, 1900A, the CUP and off the main campus boulevard at Las Positas College. The new STEAM project will have the following elements and programs. Laboratories and preparation spaces for STEAM related programs, Classrooms, Computer Labs, shared meeting rooms and workrooms. Arts, Media and Photography programs, faculty offices and shared adjunct space. The project is targeted for LEED NC v4.2 Silver Certification. The scope of work includes construction of said structures above, site and, soil stabilization, site paving, site grading, construction of site elements.

The timeline for DSA approval and estimated construction start is July 2026. The project schedule anticipates duration to be 850 calendar days from Notice to Proceed.

The DSA Inspector(s) of Record will act as the agent of the Division of State Architects at the project site and report to both the Division of the State Architect and the District's Project Planner/Manager and Construction Management consultant. The IOR will act as the agent of the District at the project site to ensure the project is constructed according to the approved DSA plans and specifications. The District's Project Planner Manager and/or Construction Manager will provide direction to the IOR.

If you are interested and qualified, please submit (1) one unbound copy of your proposal and (1) one electronic copy on thumb drive in sealed envelopes clearly marked on the outside "**Proposal B25/26-11 DSA Approved Inspector of Record - Las Positas College Building 1500 STEAM Inc. 2 & Renovation to B1800 STEM**" to the below address by **Tuesday, May 19, 2026 at 2:00p.m.**

Attn: Marie Hampton, Purchasing Manager
Chabot-Las Positas Community College
7600 Dublin Blvd, 3rd Floor
Dublin, CA 94568

Proposal questions must be submitted to Marie Hampton, Manager of Purchasing and Warehouse Services (mhampton@clpccd.org) via email before **Tuesday, May 19, 2026 by 2:00p.m.**

Proposals will be prioritized based upon experience with comparable projects in environments similar to the Las Positas College Campus.

Proposal Due Date: Tuesday, May 19, 2026 at 2:00p.m.

Proposal RFI's Due: Friday, May 8, 2026 by 2:00p.m.

Proposal Question Response Issuance: Thursday, May 14, 2026 COB.

Notice of Intent to Award: Monday, June 1, 2026

SCOPE OF CONSULTANT SERVICES

Refer to Attached Exhibit A, Draft Professional Services Agreement, and the Statement of Services, Exhibit B, which will become an exhibit to the Contract.

SUBMITTAL AND SELECTION PROCEDURE

A. SUBMITTAL REQUIREMENTS

Applicants must follow the required Proposal Format. List all proposed deliverable items, required meetings and/or critical milestones project schedule.

B. SELECTION PROCESS

The District shall review the qualifications for the Inspectors of Record Services proposed to determine his/her competency to perform the required inspection. The qualification review shall include a review of resumes with an appraisal of the candidates' education, similar project experience, project successes and may include an interview.

C. PROPOSAL FORMAT

The purpose of this proposal is to demonstrate your firm's ability to provide the required DSA- Inspector of Record Services. A major consideration will be expertise in Public Works Inspection. Consultants are urged to submit concise proposals, appropriate to the scale and duration of the Project and only include items that are relevant to this specific RFP.

A qualifying proposal must address all of the following points:

1. Project Title
2. Applicant or Firm Name
3. Firm Qualifications
 - A. Type of organization, size, professional registration, certifications, and affiliations.
 - B. Outline of recent projects completed that are directly related to the **Las Positas College Building 1500 STEAM Inc. 2 & Renovation to B1800 STEM**. Consultant is required to demonstrate specific project expertise relating to the requirements of the Project description and Scope of Services described in Exhibit A. Include examples of successes in assisting the project team in meeting construction quality, budgets, and on-time schedules.
 - C. Names, experience, qualifications and classification of each individual to conduct DSA IOR services.
 - D. Provide two (2) client references from the last 5 years, from related projects, including the name, address, and **current** phone number of the individual to contact for referral.
 - E. Any additional applicable certifications (PE, ACI, ICBO, etc.)
 - F. Current and or projected workload and availability.

4. Philosophy and Approach to Inspections

- A. Summary of philosophy and approach.
- B. Identify the specific individual who will interface with the District as single point of contact.
- C. Include resume(s) for additional Inspector of Record who will assist on project. DSA Field Inspector will determine timing.

5. Fees, Insurance, and Indemnification

A. **Fees:** Refer to Attached C, which will become an exhibit to the Contract.

- 1. Propose hourly rates and a monthly rate to perform inspection and related services, as specified under: Scope of Consultant Services, Exhibit A.
- 2. Submit an itemized fee schedule as the basis for extra services
- 3. The Consultant shall comply with Labor Code Section 1720, as amended in 1999, which requires employees engaged in certain specific work classifications be paid the prevailing wage rate found by the State of California Director of Industrial Relations.
- 4. Owner will provide at no charge a field office, desk and chair, internet connection at the jobsite. Consultant will be responsible for providing his/her own vehicle, special equipment, personal computer, printer, clerical support, and any other goods or supplies necessary to perform services as required by this contract.

B. Insurance & Indemnification:

- 1. Selected individuals or firms will be required to execute the District's Inspection Service Agreement. See Section 5 - **HOLD HARMLESS – LIABILITY AND INSURANCE** of the Draft agreement.

EXHIBIT "A"
PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT is made and entered into this _____, in the City of Dublin, County of Alameda, State of California, by and between CHABOT-LAS POSITAS COMMUNITY COLLEGE DISTRICT, a California Community College District, (hereinafter referred to as "DISTRICT") and _____(hereinafter referred to as "CONSULTANT") having its principal place of business at _____

WITNESSETH:

WHEREAS, DISTRICT desires to engage CONSULTANT to perform certain of the professional services, and

WHEREAS, CONSULTANT represents that it is fully qualified and willing to perform the services required hereunder professional services for the "DSA Inspector of Record Services (IOR) during the construction of Chabot College Library and Learning Connection Building and,

NOW THEREFORE, for and in consideration of the covenants and conditions hereinafter set forth, the parties do mutually agree as follows:

I. **STATEMENT OF WORK**

CONSULTANT hereby agrees to perform the tasks and services set forth in Exhibit "B", entitled "Statement of Services", attached hereto and made a part hereof, in accordance with the terms and conditions, sequence, time, and manner expressed herein.

II. **COMPENSATION**

For and in consideration of the services performed by CONSULTANT hereunder, DISTRICT agrees to pay CONSULTANT the sums set forth under Attachment C – Entitled "Fee Form, IOR Services", attached hereto and made a part hereof.

III. **TERMS AND CONDITIONS**

CONSULTANT agrees to be bound by the General Provisions for Professional Services Agreement identified as Exhibit "C", also attached hereto, and made a part hereof.

IV. TERM

The Term of the Agreement shall commence as of the date set forth above and shall expire upon the Consultant's completion of the services set forth herein. The foregoing notwithstanding, the Consultant shall complete the services hereunder in a prompt manner; if the District establishes a schedule for the Consultant's completion of the services under this Agreement or portions thereof, the Consultant's completion of services under this Agreement shall comply with such schedule. The Consultant shall be liable to the District for the consequences of the Consultant's failure to complete the services under this Agreement in a prompt manner or for failure to comply with a District established schedule for completion of the services or portions thereof.

IN WITNESS WHEREOF, the authorized representatives of the parties hereto have executed this Agreement effective on the date first written above.

EXHIBIT “B”
SCOPE OF CONSULTANT SERVICES

The scope of Consultant Services included in this document is to assist individuals and firms in developing their Proposal. All submittals shall be based on, but not limited to, the services listed below. Upon successful completion of contract negotiations and issuance of a contract Notice to Proceed, the Consultant will be responsible for the following:

- A. General.** The IOR shall act as an agent for the Owner at the project site. Ensure compliance with code, plans, specifications, and quality control required of the **Las Positas College Building 1500 STEAM Inc. 2 & Renovation to B1800 STEM**
- B. Relations with the Project Team.** All inconsistencies or suspected / apparent errors in the plans and specifications shall be reported promptly to the Construction Manager and Architect for interpretation and instructions by the Architect. In no case shall the final instructions be construed to cause work to be done that is not in conformity with the approved plans, codes and regulations, specifications unless accompanying documents authorize such changes. Cooperate with the Architect, Construction Manager, Testing Lab, regulatory agencies, and appropriate governing bodies during the observation of the work of construction to ensure compliance with the approved drawings and specifications.

Request interpretations and clarifications of the approved contract drawings and specifications when necessary from the Architect via the Construction Manager.

Refer any received code interpretations that cause deviations from the approved drawings and specifications to the Architect and the Construction Manager for preparation of response. Provide required reports to the Division of State Architect. Issue correction and stop work notices and notify the Construction Manager and owner in writing if work does not conform to contract documents.

- C. Facilities and Equipment.** The Owner will provide a field office, desk and chair, and internet connection at the jobsite. Consultant will be responsible for providing his/her own vehicle, and special equipment, personal computer and related equipment, printer and any clerical support and other goods and supplies necessary to perform services as required by this contract.

D. Inspection Duties

1. General

The IOR must possess actual knowledge obtained by his or her personal inspection of the work of construction in all stages of its progress to ensure that the requirements of the approved plans and specifications are being executed.

2. Special Inspection

- a. Special Inspection by Inspectors specially approved by the District may be required on all of the following, as applicable:
1. Asphaltic concrete placement
 2. Geotechnical / soil compaction
 3. High-strength steel bolt installations
 4. Welding
 5. Electrical and Mechanical work
 6. Prefabricated modular buildings
- b. Special Inspections may be performed by the IOR if he/she has been specially approved for such

purposes. Where other Special Inspectors are required to comply with DSA and/or CBC requirements, the IOR shall manage coordination, scheduling, and provide timely reporting of results to the Construction Manager.

- c. The District may also require Special Inspection for any other shop fabrication procedures that preclude the complete inspection of the work after assembly. It may require special inspection at the site in addition to those listed above if found necessary because of the special use of a material or methods of construction.
3. **Job File.** The IOR shall keep a current and up to date file of approved plans and specifications (including all approved documents authorizing changes) on the job at all times, and shall immediately return any unapproved documents to the Construction Manager for proper action. The approved plans and specifications shall have all addenda, changes, field directives identified and posted in the job file.
 4. **Construction Procedure Records.** The IOR shall keep a record of certain phases of construction procedures including, but not limited to the following:
 - a. Concrete pouring operations. The records shall indicate time, date, and location of placing concrete and the time, date, and location of removal of forms in each portion of the structure.
 - b. Welding operations. The records shall include identification masks of welders, lists of defective welds, manner of correction of defects, etc.
 - c. All such records of construction procedures shall be kept on the job until the completion of the work. These records shall be made a part of the permanent records of the Owner.
 5. **Deviations.** The IOR shall notify the Contractor, in writing of any deviations from the approved plans and specifications that are not immediately corrected by the Contractor when brought to his or her attention. Copies of such notice shall be forwarded immediately to the Construction Manager and/or the District.

Failure on the part of the IOR to notify the Contractor of deviations from the approved plans and specifications shall in no way relieve the Contractor of any responsibilities to complete the work covered by his or her contract in accordance with the approved plans and specifications and all laws and regulations.

6. Inspect and verify that Contractor's As-Built record documents are updated on a regular basis and are complete and up to date monthly prior to processing the Contractor's monthly payment request.
7. Submit, **on a daily basis**, an activity report to the Construction Manager, including the following information as it pertains to work inspected:
 1. Activities and areas of work performed by the Contractors
 2. Manpower assigned to each Contractor and Subcontractor
 3. Equipment and materials delivered to the site.
 4. Weather conditions.
 5. Construction equipment and vehicles utilized
 6. Nature and location of the work being performed
 7. Verbal instruction and clarifications of the work given to the Contractor by the Construction Manager or Architect
 8. Inspection by representative of regulatory agencies
 9. Note occurrences or conditions that might affect Contract Sum or Contract Time
 10. List of telephone calls made of a substantial nature, including statements or commitments made during the call
 11. Record any work or material in place that does not correspond with the drawings or specifications, as well as resulting action taken. List any other problems or abnormal occurrences that arise during each

day, including notations of any particular lack of activation the pad of the Contractor. Note corrective actions taken.

12. Provide Daily photos of the project.
8. Review and monitor Contractor's construction methods and procedures during all construction activities, including earthwork, concrete placement, steel erection, all finishes, electrical, mechanical, fire alarm, etc.
9. Attend all meetings as requested in contract documents and requested by the District, such as billing meetings, specification review, coordination, progress, and pre-subcontract.
10. Assist the Construction Manager and District in scheduling all required tests and testing lab visitations required by the Contract Documents. Observe and record dates and times of all test procedures.
11. Provide copies of ALL Contractor Inspection Request's approved to the Construction Manager and maintain list of Inspections and provide at weekly meetings.
12. Inspect, verify, and document Contractor's delivered equipment and materials to ensure that they meet submittal and specification requirements. Such inspection must occur within 48 hours of Contractor's delivery to the job site.
13. Submit to the Construction Manager, in a timely manner, a detailed report or request for a clarification whenever any corrective change is necessary in field construction that will result in a variance from the drawings or specification as originally issued.
14. Assist in review the Contractor's Payment Requests at billing meetings.
15. When the Contractor's work or a designated portion thereof is substantially complete, prepare a list of incomplete or unsatisfactory items via a punch list and submit to the Construction Manager.
16. Assist in the review of Contractor's Submittals and RFI's.
17. At completion of the project, deliver all inspection records and project correspondence to the Construction Manager.
18. Prior to commencement of work, IOR will cooperate with the Construction Manager and the Architect to develop an Inspection Plan for the project.

EXHIBIT "C"
GENERAL PROVISIONS FOR
PROFESSIONAL SERVICES AGREEMENT

1. Responsibility

CONSULTANT shall be solely responsible for the professional quality, technical accuracy and the coordination of all designs, drawings, specifications, calculations, data, reports or other Services to be provided hereunder, and shall, without any additional compensation, correct or revise any errors or deficiencies promptly upon notice or discovery thereof, provided that the CONSULTANT'S obligation to correct or revise errors/discrepancies in the services provided is in addition to and not in lieu of the consultant's liability to the DISTRICT for losses, costs, expenses or damages sustained by the DISTRICT as a result of such errors/deficiencies. Neither a review, approval or acceptance of, nor payment for, any of the Services required hereunder shall be construed as a waiver of any rights under this Agreement by DISTRICT or of any cause of action arising out of the performance of this Agreement, and Subcontractor shall be liable for all damages caused by or arising out of CONSULTANT'S negligent performance of any Services provided or required hereunder.

2. Changes

DISTRICT may, upon ten (10) days written notice, make changes in the Scope of Services to be provided hereunder. If such changes result in an increase or a decrease in Services, the time required to performance thereof, or the compensation thereof, this Agreement shall be modified accordingly in writing in order for such changes to be valid.

3. Termination

A. Performance of the work and Services hereunder may be terminated by DISTRICT at any time, in whole or in part:

- (1) Whenever CONSULTANT shall default in its obligations hereunder or fails to make progress in the prosecution of the work or Services; or
- (2) For the convenience of DISTRICT.

B. Termination shall be effected by delivery to CONSULTANT of the Notice of Termination, specifying whether said termination is for default of CONSULTANT or for the convenience of DISTRICT, the extent to which performance of the work and Services is terminated; and the date upon which said termination is to become effective. If, after Notice of Termination for default, it is determined that CONSULTANT was not in default, or that CONSULTANT 's failure to fulfill its obligations was due to causes beyond its control and without its fault or negligence, the Notice of Termination shall be deemed to have been issued for the convenience of DISTRICT.

C. Following receipt of Notice of Termination, CONSULTANT shall discontinue performance on the date and to the extent specified therein, and deliver to DISTRICT the completed or partially completed plans, information, data, reports, estimates, summaries, materials, or other documents which, if performance had been completed,

would be furnished to DISTRICT. CONSULTANT shall continue performance of such part of the work and Services which are not terminated by the Notice of Termination. CONSULTANT shall prepare and submit a termination claim for services satisfactorily performed, which shall include costs and expenses, reimbursable in accordance with the Terms of this Agreement, not previously paid to CONSULTANT, incurred prior to the effective date specified in the Notice of Termination, and DISTRICT may agree upon the whole or any part of the amount(s) claimed by CONSULTANT on account of the termination or partial termination.

D. In the event of termination for default, DISTRICT shall be entitled to complete the work and Services hereunder or engage others to do so and in addition to whatever remedies it may have at law if the expense of completing said work and Services is greater than the amount CONSULTANT was to receive as compensation therefore, DISTRICT shall be entitled to recover the difference from CONSULTANT.

4. Confidentiality

CONSULTANT hereby agrees that all information provided by DISTRICT relating to the Services hereunder shall be considered confidential and proprietary, and shall not be reproduced, transmitted, used or disclosed by the CONSULTANT without the written consent of DISTRICT, except as may be necessary for the non-disclosing party to fulfill its obligations hereunder; provided that the limitation shall not apply to any information or portion thereof, which is within the public domain at the time of its disclosure. The requirements of this provision shall survive the term of this Agreement.

5. Ownership and Reuse of Documents

All non-proprietary data, information, reports, drawings, renderings, or other documents or materials prepared by CONSULTANT hereunder shall become the property of DISTRICT whether or not the work covered thereby is executed; provided that CONSULTANT may at the CONSULTANT'S cost and expense reproduce such items to retain as a record copy for its files.

6. Relationship

The legal relationship of CONSULTANT to DISTRICT hereunder shall be that of an independent contractor and not that of an agent, employee, or joint venture.

7. Examination of Records

If the Services performed by CONSULTANT hereunder are in support of any government contract or program, or under a cost reimbursable type agreement, or for any authorized additional service or reimbursable expense, Subcontractor shall until the expiration of six (6) years after final payment hereunder, maintain such books and records under generally recognized accounting methods and permit inspection by DISTRICT or any of its authorized representatives.

8. Compliance with Laws

CONSULTANT shall comply with all applicable federal, state, and local laws, ordinances, rules, regulations, and orders in effect throughout the term of this Agreement, including, but

not limited to Executive Order No. 11246 of September 24, 1965, as amended (regarding Equal Employment Opportunity), and the orders of the Secretary of Labor pursuant thereto.

9. Insurance

Prior to commencing work, the CONSULTANT shall procure and maintain at CONSULTANT'S own cost and expense for the duration of this Agreement the following insurance against claims which may arise from or in connection with the performance of the work or services hereunder by the CONSULTANT, its agents, representatives, employees or subconsultant's.

A. Minimum Limits of Insurance.

CONSULTANT shall maintain limits of no less than:

- (1) Commercial General Liability
Two Million Dollars (\$2,000,000) combined single limit per occurrence for bodily injury and property damage. Coverage shall be provided on an "occurrence" basis.
- (2) Comprehensive Automobile Liability Insurance:
One Million Dollars (\$1,000,000) combined single limit per accident for bodily injury or property damage. The following coverages shall be included:
 - (a) Owned Automobiles.
 - (b) Hired Automobiles.
 - (c) Non-Owned Automobiles.
- (3) Professional Liability Errors and Omissions Insurance: With a limit of not less than One Million Dollars (\$1,000,000).
- (4) Workers' Compensation and Employer's Liability: Workers' compensation limits as required by the Labor Code of the State of California and Employer's Liability limits of One Million Dollars (\$1,000,000) per accident.

B. Deductibles and Self-insured Retentions. Any deductibles or self-insured retentions must be declared to and approved by the DISTRICT. At the option of the DISTRICT, the insurer shall reduce or eliminate such deductibles (limited to general and automobile liability insurance only) or self-insured retentions with respect to the DISTRICT, its officials and employees, or the CONSULTANT shall procure a bond guaranteeing payment of losses and related investigation, claim administration, and defense expenses.

C. Other Insurance Provisions

- (1) General Liability and Automobile Liability Coverages Only:
 - (a) The DISTRICT, members of its boards and commissions, officers, and employees are to be covered as insureds as respects: liability arising out

of activities performed by or on behalf of the CONSULTANT; premises owned, leased, or used by the CONSULTANT; and premises on which CONSULTANT is performing services on behalf of the DISTRICT.

The coverage shall contain no special limitations on the scope of protection afforded to the DISTRICT, members of its boards and commissions, officers, and employees.

- (b) The CONSULTANT'S insurance coverage shall be primary insurance as respects the DISTRICT, members of its boards and commissions, officers, and employees. Any insurance or self-insurance maintained by the DISTRICT, its officials, and employees, shall be in excess of Consultant's insurance and shall not contribute with it.
- (c) Any failure to comply with reporting provisions of the policies shall not affect coverage provided to the DISTRICT, members of its boards and commissions, officers, or employees.
- d) Coverage shall state that CONSULTANT'S insurance shall apply separately to each insured against whom a claim is made, or suit is brought, except with respect to the limits of the insurer's liability.

(2) Workers' Compensation and Employer's Liability Coverages:

The insurer shall agree to waive all rights of subrogation against the DISTRICT, members of its boards and commissions, officers, and employees for losses arising from work performed by CONSULTANT for the DISTRICT.

(3) All Coverages.

- (a) Each insurance policy required by this Agreement shall be endorsed to state that coverage shall not be suspended, voided, canceled, or reduced in coverage limits except after thirty (30) days prior written notice has been given to the DISTRICT.
- (b) If CONSULTANT, for any reason, fails to maintain insurance coverage which is required pursuant to this Agreement, such failure shall be deemed a material breach of this Agreement. The DISTRICT, at its sole option, may terminate this Agreement in accordance with Provision Number 14, Termination. Alternatively, the DISTRICT may purchase such required insurance and may deduct that cost from sums owed to Consultant provided CONSULTANT does not obtain the insurance itself within five (5) days of receipt of the DISTRICT'S notice of intent.
- (c) CONSULTANT agrees to add designated agents of the DISTRICT as additional insured under the above policies as mutually agreed.

D. Acceptability of Insurers.

Insurance is to be placed with insurers rated A: 6 or better by A.M. Best's rating-service.

E. Verification of Coverage.

CONSULTANT shall furnish the DISTRICT with written evidence acceptable to the DISTRICT of insurance and minimum coverage amounts required by this Agreement.

F. Subconsultant's.

Prior to authorizing work by a Subconsultant to proceed, CONSULTANT shall provide to the DISTRICT evidence acceptable to the DISTRICT of insurance demonstrating satisfactory compliance by each Subconsultant with the insurance requirements stated herein.

10. Indemnity

A. To the fullest extent permitted by law, the CONSULTANT shall indemnify, defend and hold harmless the District and its employees, officers, Board of Trustee, Trustees, agents and representatives from any and all claims, demands, losses, responsibilities or liabilities for: (i) injury or death of persons; (ii) damage to property or: (iii) other costs or charges, directly or indirectly arising out of or attributable, in whole or in part, to the negligent or willful acts, omissions, errors and/or other conduct of CONSULTANT, its Design Consultants or the employees, agents and representatives of CONSULTANT or any of its Design Consultants in the performance of obligations or services or in providing work product under this Agreement. The foregoing shall include without limitation, attorneys' fees and costs incurred by the District. The provisions hereof shall apply during the period of CONSULTANT'S performance under this Agreement and shall survive the termination of this Agreement until any such claim, demand, loss, responsibility, or liability covered by the provisions hereof is barred by the applicable Statute of Limitations.

11. Remedies.

The rights and remedies set forth herein shall be in addition to any other remedies provided by law, and waiver by DISTRICT of any provision hereunder or a breach thereof by DISTRICT shall not be deemed a waiver of future compliance thereof and such provision shall continue in full force and effect.

12. Severability.

In the event that any term or provision of this Agreement is held to be illegal, invalid, or unenforceable under the laws, regulations or ordinances of any federal, state, or other government to which this Agreement is subject, such term or provision shall be deemed severed from this Agreement and the remaining terms and provisions shall remain unaffected thereby and continue in full force.

13. Notices.

All notices required or permitted under this Agreement shall be considered as duly given to any party for all purposes hereof only if given in writing and hand delivered; or sent by registered or certified mail, postage prepaid and return receipt requested; or sent by electronic email; with confirming receipt; telex, or telegram, and also confirmed by registered mail, postage prepaid and return receipt requested, addressed as set forth below, or to such other address as may be designated by notice given as provided above. All notices shall be effective upon first receipt, unless otherwise specified herein.

CONSULTANT:

14. Modification.

This Agreement may only be modified by a written amendment hereto, duly executed by both parties.

15. Successors and Assignment.

CONSULTANT binds itself, its successors, assigns, and legal representatives to DISTRICT with respect to all of the covenants of this Agreement and further agrees that it shall not sell, assign, transfer, mortgage, pledge or in any manner encumber its interests in this Agreement or in any proceeds from this Agreement without the prior written consent of DISTRICT. In the event that CONSULTANT violates the foregoing prohibition, or in the event that CONSULTANT without the prior written consent of DISTRICT, which consent shall not be unreasonably withheld, sells, assigns, transfers, mortgages, pledges or in any manner encumbers, except as security for credit agreements, all or substantially all of its corporate assets, or directly or indirectly undergoes a change in control of its ownership, DISTRICT shall be entitled, at its sole option:

- A. To require the CONSULTANT'S successor to continue to perform under this Agreement and to continue to satisfactorily fulfill CONSULTANT'S obligations under this Agreement; or
- B. To terminate this Agreement. In such case CONSULTANT shall be responsible for any and all liabilities arising from such termination. In the event that DISTRICT replaces CONSULTANT with another consultant after such termination, CONSULTANT shall be responsible for any and all costs, expenses and liabilities arising from such substitution. In any event, CONSULTANT shall remain liable for any and all work product or services provided by it prior to the termination.

This Agreement and the terms hereof are binding upon and inure to the benefit of the successors and assigns of both the District and the CONSULTANT.

16. Disputes.

- A. Continuation of Consultant Services. Except in the event of the District's failure to make undisputed payment of the Contract Price due the Consultant, notwithstanding

any disputes between District and Consultant hereunder, Consultant and District shall each continue to perform their respective obligations hereunder; including the obligation of the Consultant to continue to provide and perform services hereunder pending a subsequent resolution of such disputes.

- B. Mandatory Mediation. All claims, disputes and other matters in controversy between the Consultant and the District arising out of or pertaining to this Agreement shall be submitted for resolution by non-binding mediation conducted under the auspices of the American Arbitration Association (“AAA”) and the Construction Mediation Rules of the AAA in effect at the time that a Demand For Mediation is filed. The commencement and completion of mediation proceedings pursuant to the foregoing is a condition precedent to either the District or the Consultant commencing arbitration proceedings.
- C. Binding Arbitration. Claims, disputes or other matters in question between the parties to this Agreement arising out of or relating to this Agreement or breach thereof which are not resolved through the mandatory mediation procedures set forth above shall be resolved by binding arbitration conducted in accordance with the Construction Industry Arbitration Rules of the American Arbitration Association in effect at the time of the filing of a Demand for Arbitration, provided that the Parties may by mutual agreement modify such Rules or adopt other rules governing the conduct of arbitration proceedings.
- D. Demand for arbitration shall be filed in writing with the other party to this Agreement and with the American Arbitration Association. A demand for arbitration shall be made within a reasonable time after the claim; dispute or other matter in question has arisen. In no event shall the demand for arbitration be made after the date when institution of legal or equitable proceedings based on such claim, dispute or other matter in question would be barred by the applicable statutes of limitations.
- E. No arbitration arising out of or relating to this Agreement shall include, by consolidation, joinder or in any other manner, an additional person or entity not a party to this Agreement, except by written consent containing a specific reference to the Agreement signed by the District, CONSULTANT and any other person or entity sought to be joined. Consent to arbitration involving an additional person or entity shall not constitute consent to arbitration of any claim, dispute or other matter in question not described in the written consent or with a person or entity not named or described therein. The foregoing agreement to arbitrate and other agreements to arbitrate with an additional person or entity duly consented to by the parties to this Agreement shall be specifically enforceable in accordance with applicable law in any court having jurisdiction thereof.
- F. The award rendered by the arbitrator or arbitrators shall be final, and judgment may be entered upon it in accordance with applicable law in any court having jurisdiction thereof.

17. Extent of Agreement.
The Agreement and Exhibit A “Statement of Services,” Exhibit B “Compensation and Payment,” and Exhibit C,” General Provisions for Professional Services Agreement,” contain all of the promises, representations and understandings of the parties hereto and supersedes any previous understandings, commitments, proposals or agreements, whether oral or written, and may only be modified as hereinbefore provided.
18. Governing Laws.
Unless otherwise specified herein, this Agreement shall be governed by the law of the State of California.
19. Professional Registration.
If the CONSULTANT’s Services under this Agreement involve the production of documents or drawings that require signing or sealing by a registered professional, CONSULTANT warrants that it has such qualified person assigned to this Project who is registered in the State(s) of California.
20. Time.
Time is of the essence in the performance and completion of the CONSULTANT’S obligations under the Agreement.

DRUG-FREE WORKPLACE CERTIFICATION

I, _____, am the _____ of
(Print Name) (Title)
_____. I declare, state, and certify to all of the following.
(Contractor Name)

1. I am aware of the provisions and requirements of California Government Code §§8350 et seq., the Drug Free Workplace Act of 1990.
2. I am authorized to certify, and do certify, on behalf of Contractor that a drug free workplace will be provided by Contractor by doing all of the following:
 - A. Publishing a statement notifying employees that the unlawful manufacture, distribution, dispensation, possession or use of a controlled substance is prohibited in Contractor's workplace and specifying actions which will be taken against employees for violation of the prohibition;
 - B. Establishing a drug-free awareness program to inform employees about all of the following:
 - (i) The dangers of drug abuse in the workplace;
 - (ii) Contractor's policy of maintaining a drug-free workplace;
 - (iii) The availability of drug counseling, rehabilitation, and employee-assistance programs; and
 - (iv) The penalties that may be imposed upon employees for drug abuse violations;
 - C. Requiring that each employee engaged in the performance of the Contract be given a copy of the statement required by subdivision (A), above, and that as a condition of employment by Contractor in connection with the Work of the Contract, the employee agrees to abide by the terms of the statement.
3. Contractor agrees to fulfill and discharge all of Contractor's obligations under the terms and requirements of California Government Code §8355 by, inter alia, publishing a statement notifying employees concerning: (a) the prohibition of any controlled substance in the workplace, (b) establishing a drug-free awareness program, and (c) requiring that each employee engaged in the performance of the Work of the Contract be given a copy of the statement required by California Government Code §8355(a) and requiring that the employee agree to abide by the terms of that statement.
4. Contractor and I understand that if the District determines that Contractor has either: (a) made a false certification herein, or (b) violated this certification by failing to carry out and to implement the requirements of California Government Code §§8355, the Contract awarded herein is subject to termination, suspension of payments, or both. Contractor and I further understand that, should Contractor violate the terms of the Drug-Free Workplace Act of 1990, Contractor may be subject to debarment in accordance with the provisions of California Government Code §§8350, et seq.
5. Contractor and I acknowledge that Contractor and I are aware of the provisions of California Government Code §§8350, et seq. and hereby certify that Contractor and I will adhere to, fulfill, satisfy and discharge all provisions of and obligations under the Drug-Free Workplace Act of 1990.

I declare under penalty of perjury under the laws of the State of California that all of the foregoing is true and correct.

I, _____, being first duly sworn, deposes and says that I am
(Typed or Printed Name)

The _____ of _____, the party submitting
(Title) (Bidder Name)

the foregoing Bid Proposal (“the Bidder”). In connection with the foregoing Bid Proposal, the undersigned declares, states, and certifies that:

1. The Bid Proposal is not made in the interest of or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation.
2. The Bid Proposal is genuine and not collusive or sham.
3. The bidder has not directly or indirectly induced or solicited any other bidder to put in a false or sham bid, and has not directly or indirectly colluded, conspired, connived, or agreed with any other bidder or anyone else to put in sham bid, or to refrain from bidding.
4. The bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price, or that of any other bidder, or to fix any overhead, profit or cost element of the bid price or that of any other bidder, or to secure any advantage against the public body awarding the contract or of anyone interested in the proposed contract.
5. All statements contained in the Bid Proposal and related documents are true.
6. The bidder has not, directly or indirectly, submitted the bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, or paid, and will not pay, any fee to any person, corporation, partnership, company, association, organization, bid depository, or to any member or agent thereof to effectuate a collusive or sham bid.

LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

IMPORTANT: This form is only a summary list of structural tests and some of the special inspections required for the project. Any items indicated on the approved construction documents with a note stating that the items are not part of the DSA approval are not considered in this form. Generally, the structural tests and special inspections noted on this form are those that will be performed by the Geotechnical Engineer of Record, Laboratory of Record, or Special Inspector. The actual complete test and inspection program must be performed as detailed on the DSA approved documents. The appendix at the bottom of this form identifies work NOT subject to DSA requirements for special inspection or structural testing. The project inspector is responsible for providing inspection of all facets of construction, including but not limited to, special inspections not listed on this form such as structural wood framing, high-load wood diaphragms, cold-formed steel framing, anchorage of nonstructural components, etc., per Title 24, Part 2, Chapter 17A.

Legend to TYPE and BY Columns:

Continuous - Indicates continuous special inspection is required.

Periodic - Indicates periodic special inspection is required.

Test - Indicates a test is required.

GE – Indicates special inspection shall be performed by a registered geotechnical engineer or his/her authorized representative, usually associated with the Laboratory of Record.

LOR – Indicates test or special inspection shall be performed by a testing laboratory accepted in the DSA Laboratory Evaluation and Acceptance (LEA) Program (i.e., the Laboratory of Record for the project). See CAC Section 4-335.

PI - Indicates special inspection may be performed by a project inspector when specifically approved by DSA.

SI - Indicates special inspection shall be performed by an appropriately qualified/approved special inspector.

Required Verified Reports:

1. Soils Testing and Inspection: Form DSA 293
2. Structural Testing and Inspection: Form DSA 291
3. Concrete Batch Plant Inspection: Form DSA 291
4. Post-installed Anchors: Form DSA 291 or DSA 292
5. Shop Welding Inspection: Form DSA 291 or DSA 292
6. Field Welding Inspection: Form DSA 291 or Form DSA 292
7. High-Strength Bolting Inspection: Form DSA 291 or DSA 292

Verified reports are required on the following DSA forms:

DSA 291: Laboratory of Record Verified Report

DSA 292: Special Inspectors Employed Directly by the District Verified Report

DSA 293: Geotechnical Verified Report

Note: To facilitate DSA electronic mark-ups and identification stamp application, DSA recommends against using secured electronic or digital signatures.

Name of Architect or Engineer in General Responsible Charge:

Carey Woo

Name of Structural Engineer of Record (when applicable):

David Bleiman

Signature of Architect or Structural Engineer:

Date:

07/24/2025

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

NOTE: Undefined sections and table references found in this appendix are from the CBC, or California Building Code

S1. GENERAL:	
Test or Special Inspection	Code References and Notes
<p>S1a: Site Preparation Verify that:</p> <ul style="list-style-type: none"> • Site has been prepared properly prior to placement of controlled fill and/or excavations for foundations. • Foundation excavations are extended to proper depth and have reached proper material. • Materials below footings are adequate to achieve the design bearing capacity. 	<p>* By geotechnical engineer or his or her qualified representative. (See Appendix (end of this form) form for exemptions.)</p>

S2. SOIL COMPACTION AND FILL:	
Test or Special Inspection	Code References and Notes
<p>S2a: Fill Materials Perform classification and testing of fill materials.</p>	<p>* Under the supervision of the geotechnical engineer.</p>
<p>S2b: Fill Placement Verify use of proper materials, densities and inspect lift thicknesses, placement and compaction during placement of fill.</p>	<p>* By geotechnical engineer or his or her qualified representative. (Refer to specific items identified in the Appendix (end of this form) form for exemptions where soils SI and testing may be conducted under the supervision of a geotechnical engineer or LOR's engineering manager. In such cases, the LOR's form DSA 291 shall satisfy the soil SI and test reporting requirements for the exempt items.)</p>
<p>S2c: Compaction Compaction testing.</p>	<p>* Under the supervision of the geotechnical engineer. (Refer to specific items identified in the Appendix (end of this form) for exemptions where soils testing may be conducted under the supervision of a geotechnical engineer or LOR's engineering manager. In such cases, the LOR's form DSA 291 shall satisfy the soil test reporting requirements for the exempt items.)</p>

S3. DRIVEN DEEP FOUNDATIONS (PILES):	
Test or Special Inspection	Code References and Notes
<p>S3a: Materials and Members Verify pile materials, sizes and lengths comply with the requirements.</p>	<p>* By geotechnical engineer or his or her qualified representative.</p>
<p>S3b: Pile Capacity Determine capacities of test piles and conduct additional load tests as required.</p>	<p>* Under the supervision of the geotechnical engineer.</p>
<p>S3c: Driving Operations Inspect driving operations and maintain complete and accurate records for each pile.</p>	<p>* By geotechnical engineer or his or her qualified representative.</p>

Project Name: **Las Positas College**
 School District: **Chabot-Las Positas Community College District**

Application No.: **01-121987** Increment: **2**
 File No.: **1-C2**

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

<p>S3d: Pile Installation Verify locations of piles and their plumbness, confirm type and size of hammer, record number of blows per foot of penetration, determine required penetrations to achieve design capacity, record tip and butt elevations and record any pile damage.</p>	<p>* By geotechnical engineer or his or her qualified representative.</p>
<p>S3e: Specialty Piles For specialty piles, perform additional inspections as determined by the registered design professional in responsible charge.</p>	<p>* As defined on drawings or specifications.</p>

S4. CAST-IN-PLACE DEEP FOUNDATIONS (PIERS):

Test or Special Inspection	Code References and Note
<p>S4a: Drilling Operations Inspect drilling operations and maintain complete and accurate records for each pier.</p>	<p>* By geotechnical engineer or his or her qualified representative. (See Appendix (end of this form) for exemptions.)</p>
<p>S4b: Pier Construction Verify pier locations, diameters, plumbness, bell diameters (if applicable), lengths and embedment into bedrock (if applicable); record concrete or grout volumes.</p>	<p>* By geotechnical engineer or his or her qualified representative. (See Appendix (end of this form) for exemptions.)</p>
<p>S4c: Bearing Strata Confirm adequate end strata bearing capacity.</p>	<p>* By geotechnical engineer or his or her qualified representative. (See Appendix (end of this form) for exemptions.)</p>

S5. RETAINING WALLS:

Test or Special Inspection	Code References and Notes
<p>S5a: Backfill Placement Placement, compaction and inspection of backfill.</p>	<p>1705A.6.1. * By geotechnical engineer or his or her qualified representative. (See section S2 above).</p>
<p>S5b: Soil Reinf. and Drainage Placement of soil reinforcement and/or drainage devices.</p>	<p>* By geotechnical engineer or his or her qualified representative.</p>
<p>S5c: Segmental Retaining Walls Segmental retaining walls; inspect placement of units, dowels, connectors, etc.</p>	<p>* By geotechnical engineer or his or her qualified representative. See DSA IR 18-2.</p>

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

C1. CAST-IN-PLACE CONCRETE	
Test or Special Inspection	Code References and Notes
C1a: Mix Design Verify use of required design mix.	Table 1705A.3 Item 5, 1903A.5, 1903A.7, 1904A.1, 1904A.2, 1910A.1 ; ACI 318 Ch. 19, 26.4, 26.13.3.2.
C1b: Reinforcing Steel Identify, sample, and test reinforcing steel.	Table 1705A.3 Item 1, 1705A.3.9, 1908A.1, 1910A.2; ACI 318 Ch. 20 and Sections 25.2, 25.3, 25.5.1, 26.6.1; DSA IR 17-10 and BU 24-02. (See Appendix (end of this form) for exemptions.)
C1c: Concrete Material During concrete placement, fabricate specimens for strength tests, perform slump and air content tests, and determine the temperature of the concrete.	Table 1705A.3 Item 6, 1705A.3.9, 1905A.1.17; ASTM C31, ASTM C172; ACI 318 Sections 26.4, 26.5 & 26.12.
C1d: Strength Test Test concrete (f'c).	1905A.1.17; ACI 318 Section 26.12.
C1e: Batch Plant Inspection Batch plant inspection: Continuous	Default of "Continuous" per 1705A.3.3. If approved by DSA, batch plant inspection may be reduced to "Periodic" subject to requirements in Section 1705A.3.3.1, or not required per 1705A.3.3.2. See IR 17-13. (See Appendix (end of this form) for exemptions.)

C2. PRESTRESSED / POST-TENSIONED CONCRETE (IN ADDITION TO SECTION C1):	
Test or Special Inspection	Code References and Notes
C2a: Tendons and Anchorage Sample and test prestressing tendons and anchorages.	1705A.3.4 Table 1705A.3 Item 1, 1910A.3; ACI 318 Ch. 20 and Sections 25.2, 26.6.1.
C2b: Tendon Placement Inspect placement of prestressing tendons.	1705A.3.4, Table 1705A.3 Items 1 & 9; ACI 318 Ch. 20 and Sections 25.2, 26.6.1-26.6.3.
C2c: Concrete Strength Verify in-situ concrete strength prior to stressing of post-tensioning tendons.	Table 1705A.3 Item 13; ACI 318 Sections 26.10.2, 26.11.2, 26.13.3.3. Special inspector to verify specified concrete strength test prior to stressing.
C2d: Stressing Operations Inspect application of post-tensioning or prestressing forces and grouting of bonded prestressing tendons.	1705A.3.4, Table 1705A.3 Item 9; ACI 318 Sections 26.10.2, 26.13.1, 26.13.3.2.

C3. PRECAST CONCRETE (IN ADDITION TO SECTION C1):	
Test or Special Inspection	Code References and Notes
C3a: General Fabrication 1. Inspect fabrication of precast concrete members. * 2. Inspect reinforcement of the following precast concrete elements or system(s): a. special moment frames. b. boundary elements of special structural walls. c. coupling beams.	1705A.3 Item 1, 7. See Appendix for exemptions. *May be periodic where fabrication occurs in a PCI-certified plant. For underground structures, NPCA plant certification is acceptable. PCI MNL-116-21; PCI MNL-117-13; NPCA Quality Control Manual (QCM) 17th Edition. See IR A-15.

 School District: **Chabot-Las Positas Community College District**

Application No.: **01-121987** Increment: **2**
 File No.: **1-C2**

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

C3b: General Erection Inspect erection of precast concrete members.	Table 1705A.3 Item 10.
C3c: Diaphragm Connections For precast concrete diaphragm connections or reinforcement at joints classified as moderate or high deformability elements (MDE or HDE) in structures assigned to Seismic Design Category D, E or F, inspect such connections and reinforcement in the field for: 1. Installation of the embedded parts. 2. Completion of the continuity of reinforcement across joints. 3. Completion of connections in the field.	Table 1705A.3 Item 11.
C3d: Diaphragm Tolerances Inspect installation tolerances of precast concrete diaphragm connections for compliance with ACI 550.5.	Table 1705A.3 Item 12

C4. SHOTCRETE (IN ADDITION TO SECTION C1):	
Test or Special Inspection	Code References and Notes
C4a: Placement Inspect shotcrete placement for proper application techniques.	1705A.3.9, Table 1705A.3 Item 7, 1908A.1, 1908A.2, 1908A.3. See ACI 506.2 Section 3.4, and ACI 506R.
C4b: Shotcrete Material Sample and test shotcrete (f'_c).	1908A.2 and 1705A.3.9.

C5. POST-INSTALLED ANCHORS:	
Test or Special Inspection	Code References and Notes
C5a: Inspection Inspect installation of post-installed anchors	1617A.1.19, Table 1705A.3 Item 4a (Continuous) & 4b (Periodic), 1705A.3.8 (See Appendix (end of this form) for exemptions). ACI 318 Sections 26.7.2, 26.13.1, 26.13.3.2, 26.13.3.3. * May be performed by the project inspector when specifically approved by DSA.
C5b: Test Test post-installed anchors.	1910A.5. (See Appendix (end of this form) for exemptions.)

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

M1. STRUCTURAL MASONRY:	
Test or Special Inspection	Code References and Notes
M1a: Mill Certificates - Reinf. Mill certificate indicates compliance with requirements for reinforcement, anchors, ties, fasteners and metal accessories. See item C1(b) for identification, sampling and testing of reinforcing steel.	2103A.4; TMS 602-16 Article 1.5B.2 & 2.4. * To be performed by qualified LOR representative. Applicable testing by LOR. See IR 17-10 for unidentified reinforcing steel.
M1b: Material Certificates Producer's certificate of compliance for masonry units, mortar and grout materials.	1705A.4, 2103A.2, 2103A.3, 2103A.5; TMS 602 Articles 1.5B.2, 2.1, 2.2, 2.6A and 2.6B, and Table 6 footnote 3.
M1c: Strength Test Test masonry (f _m).	1705A.4. For Unit Strength: 2105A.3; TMS 602 Articles 1.4B.2, 1.5B.1 & 1.5B.2. For Prism (required when f_m > 2000 psi):2105A.2; TMS 602 Articles 1.4B.3, 1.4B.4, 1.5B.1 & 1.5B.2.
M1d: Mortar Proportions Verify proportions or properties of site-prepared, premixed or preblended mortar.	TMS 602, Table 3 (row 5), Table 4 Item 1a. DSA PR 20-01. (See Appendix (end of this form) for exemptions.)
M1e: Grout Proportions Verify proportions or properties of site-prepared, premixed or preblended grout.	TMS 602, Table 3 (row 5), Table 4 Item 2d. (See Appendix (end of this form) for exemptions.)
M1f: Batch Plant Inspection Batch plant inspection: Periodic	Default of ' Continuous ' per 1705A.3.3 . If approved by DSA, batch plant inspection may be reduced to ' Periodic ' subject to requirements in Section 1705A.3.3.1 , or not required per 1705A.3.3.2 . See IR 17-13. Refer to TMS 602 Table 3 and Table 4, Item #3a. (See Appendix (end of this form) for exemptions.)
M1g: Core Tests Test core-drilled samples.	2105A.4. (See Appendix (end of this form) for exemptions.)
M1h: Prisms Inspect preparation of prisms.	TMS 602 Articles 1.4.B.3 & 1.4.B.4 & Table 4 Item 4.
M1i: Dowels and Supports Verify size, location and condition of all dowels, construction supporting masonry, etc.	
M1j: Reinforcement and Members Verify size, grade and type of reinforcement, connectors, and anchor bolts. Verify size and location of structural members.	TMS 602 Table 4, Items 1c & 3c.
M1k: Reinforcement Placement Inspect placement of reinforcement, anchor bolts, and connectors.	TMS 602 Table 4 Item 2c.
M1l: Grout Placement Placement, consolidation, and reconsolidation of grout.	TMS 602 Table 4 Item 3h.
M1m: Unit Layout and Joints Inspect placement of masonry units and construction of mortar joints.	TMS 602 Table 4 Item 3b.
M1n: Cold/Hot Weather Work Verify preparation, construction and protection of masonry during cold weather (temperature below 40° F) or hot weather (temperature above 90° F).	TMS 602 Table 4 Item 3f. * May be performed by the project inspector when specifically approved by DSA.
M1o: Anchors and Embeds Inspect type, size and location of anchors and all other items to be embedded in masonry including other details of anchorage of masonry	TMS 602 Table 4 Item 3d.

Project Name: **Las Positas College**
 School District: **Chabot-Las Positas Community College District**

Application No.: **01-121987** Increment: **2**
 File No.: **1-C2**

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

to structural members, frames and other construction.	
M1p: Grout Cavity Inspect grout space, including mortar protrusions, prior to placement of grout.	TMS 602 Table 4 Item 2a.

M2. VENEER OR GLASS BLOCK PARTITIONS:	
Test or Special Inspection	Code References and Notes
M2a: Mortar and Grout Verify proportions of site prepared mortar and grout and/or verify certification of premixed mortar.	TMS 602 Table 3 (row 5) and Table 4 Items 1a & 2d.
M2b: Unit Layup and Joints Inspect placement of units and construction of mortar joints.	TMS 602 Table 4 Item 3b.
M2c: Wires and Connector Inspect placement of wire, connectors and anchors	TMS 602 Table 4 Item 2c.
M2d: Anchors and Embeds Inspect type, size and location of anchors and all other items to be embedded in masonry veneer including details of anchorage of masonry to veneer backing, frames and other construction.	TMS 602 Table 4 Item 3d.
M2e: Cold/Hot Weather Work Verify preparation, construction and protection of masonry during cold weather (temperature below 40° F) or hot weather (above 90° F).	TMS 602 Table 4 Item 3f. * May be performed by the project inspector when specifically approved by DSA.
M2f: Adhered Veneer Bond Test adhered veneer bond strength.	1410.2.1; TMS 402 Article 12.3.2.4. (Field-constructed mock-up using specified unit, mortar, and substrate, laboratory tested in accordance with ASTM C1823).

M3. POST-INSTALLED ANCHORS IN MASONRY:	
Test or Special Inspection	Code References and Notes
M3a: Inspection Inspect installation of post-installed anchors	1617A.1.19, 1705A.4, Table 1705A.3 Item 4a (Continuous) & 4b (Periodic); ACI 318 Section 26.13. * May be performed by the project inspector when specifically approved by DSA. (See Appendix (end of this form) for exemptions.)
M3b: Test Test post-installed anchors.	1705A.4, 1910A.5. (See Appendix (end of this form) for exemptions.)

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

S/A1. STRUCTURAL STEEL, COLD-FORMED STEEL AND ALUMINUM USED FOR STRUCTURAL PURPOSES	
Test or Special Inspection	Code References and Notes
S/A1a: Material Identification Verify identification of all materials and: • Mill certificates indicate material properties that comply with requirements. • Material sizes, types and grades comply with requirements.	Table 1705A.2.1 Item 3a–3c. 2202A.1; AISI S100 Section A3.1 & A3.2, AISI S240 Section A3 & A5, AISI S220 Sections A4 & A6. *By special inspector or qualified technician when performed off-site.
S/A1b: Unidentified Material Test unidentified materials	2202A.1.
S/A1c: Steel Fabrication Verify and document steel fabrication per DSA- approved construction documents.	Not applicable to cold-formed steel light-frame construction, except for trusses (1705A.2.4).
S/A1d: Buckling Restrained Brace Verify and document steel fabrication per DSA-approved construction documents.	Testing and special inspections in accordance with IR 22-4. For DSA accepted fabrication shops, BRB manufacturer's Certificate of Compliance in lieu of testing and special inspections. See IR 22-4.

S/A2. HIGH-STRENGTH BOLTS:	
Test or Special Inspection	Code References and Notes
S/A2a: Product Verification Verify identification markings and manufacturer's certificates of compliance conform to ASTM standards specified in the DSA-approved documents.	Table 1705A.2.1 Items 1a & 1b, 2202A.1; AISC 360 Section A3.3, J3.1, and N3.2; RCSC Section 1.5 & 2.1; DSA IR 17-8 & DSA IR 17-9.
S/A2b: Bolts, Nuts, and Washers Test high-strength bolts, nuts and washers.	Table 1705A.2.1 Item 1c, 2213A.1; RCSC Section 7.2; DSA IR 17-8.
S/A2c: Snug Tight Bearing-type ("snug tight") connections.	Table 1705A.2.1 Item 2a, 1705A.2.6, 2204A.2; AISC 360 J3.1, J3.2, M2.5 & N5.6; RCSC Section 9.1; DSA IR 17-9.
S/A2d: Pretensioned / Slip-Critical Pretensioned and slip-critical connections.	Table 1705A.2.1 Items 2b & 2c, 1705A.2.6, 2204A.2; AISC 360 J3.1, J3.2, M2.5 & N5.6; RCSC Sections 9.2 & 9.3; DSA IR 17-9 **"Continuous" or "Periodic" depends on the tightening method used.

S/A3. WELDING:	
Test or Special Inspection	Code References and Notes
S/A3a: Weld Material Verify weld filler material identification markings per AWS designation listed on the DSA-approved documents and the WPS.	1705A.2.5, Table 1705A.2.1 Items 4 & 5; AWS D1.1 and AWS D1.8 for structural steel; AWS D1.2 for Aluminum; AWS D1.3 for cold-formed steel; AWS D1.4 for reinforcing steel; DSA IR 17-3.
S/A3b: Certificate of Compliance Verify weld filler material manufacturer's certificate of compliance.	DSA IR 17-3.
S/A3c: WPS and Qualifications Verify WPS, welder qualifications and equipment.	DSA IR 17-3.

Project Name: **Las Positas College**
 School District: **Chabot-Las Positas Community College District**

Application No.: **01-121987** Increment: **2**
 File No.: **1-C2**

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

S/A4. SHOP WELDING (IN ADDITION TO SECTION S/A3):	
Test or Special Inspection	Code References and Notes
S/A4a: Weld Category A Inspect groove welds, multi-pass fillet welds, single pass fillet welds > 5/16", plug and slot welds.	Table 1705A.2.1 Items 5a.1-4 ; AISC 360 (and AISC 341 as applicable); DSA IR 17-3.
S/A4b: Weld Category B Inspect single-pass fillet welds ≤ 5/16", floor and roof deck welds.	1705A.2.2, Table 1705A.2.1 Items 5a.5 & 5a.6 ; AISC 360 (and AISC 341 as applicable); DSA IR 17-3.
S/A4c: Stairs and Railing Inspect welding of stairs and railing systems.	1705A.2.1 ; AISC 360 (and AISC 341 as applicable); AWS D1.1 & D1.3; DSA IR 17-3.
S/A4d: Reinf. Steel Weldability Verification of reinforcing steel weldability other than ASTM A706.	1705A.3.1 ; AWS D1.4; DSA IR 17-3. Verify carbon equivalent reported on mill certificates.
S/A4e: Reinforcing Steel Inspect welding of reinforcing steel.	Table 1705A.2.1 Item 5b, 1705A.3.1, Table 1705A.3 Item 2, 1903A.8 ; AWS D1.4; DSA IR 17-3.

S/A5. FIELD WELDING (IN ADDITION TO SECTION S/A3):	
Test or Special Inspection	Code References and Notes
S/A5a: Weld Category A Inspect groove welds, multi-pass fillet welds, single pass fillet welds > 5/16", plug and slot welds.	Table 1705A.2.1 Items 5a.1-4 ; AISC 360 (AISC 341 as applicable); DSA IR 17-3.
S/A5b: Weld Category B Inspect single-pass fillet welds ≤ 5/16".	Table 1705A.2.1 Item 5a.5 ; AISC 360 (AISC 341 as applicable); DSA IR 17-3.
S/A5c: End Welded Studs Inspect end-welded studs (ASTM A-108) installation (including bend test).	2213A.2 ; AISC 360 (AISC 341 as applicable); AWS D1.1; DSA IR 17-3.
S/A5d: Deck Welds Inspect floor and roof deck welds.	1705A.2.2, Table 1705A.2.1 Item 5a.6 ; AISC 360 (AISC 341 as applicable); AWS D1.3; DSA IR 17-3.
S/A5e: Cold-Formed Steel Inspect welding of structural cold-formed steel.	1705A.2.5 ; AWS D1.3; DSA IR 17-3. The quality control provisions of AISI S240 Chapter D shall also apply. * May be performed by the project inspector when specifically approved by DSA.
S/A5f: Stairs and Railing Inspect welding of stairs and railing systems.	1705A.2.1 ; AISC 360 (AISC 341 as applicable); AWS D1.1 & D1.3; DSA IR 17-3. * May be performed by the project inspector when specifically approved by DSA.
S/A5g: Reinf. Steel Weldability Verification of reinforcing steel weldability.	1705A.3.1 ; AWS D1.4; DSA IR 17-3. Verify carbon equivalent reported on mill certificates.
S/A5h: Reinforcing Steel Inspect welding of reinforcing steel.	Table 1705A.2.1 Item 5b, 1705A.3.1, Table 1705A.3 Item 2, 1903A.8 ; AWS D1.4; DSA IR 17-3.

S/A6. NONDESTRUCTIVE TESTING:	
Test or Special Inspection	Code References and Notes
S/A6a: Ultrasonic Ultrasonic	1705A.2.1, Table 1705A.2.1 Item 4c, 1705A.2.5; AISC 341 J6.2, AISC 360 N5.5; AWS D1.1, AWS D1.8; DSA IR 17-2.
S/A6b: Magnetic Particle Magnetic Particle	1705A.2.1, Table 1705A.2.1 Item 4c, 1705A.2.5; AISC 341 J6.2, AISC 360 N5.5; AWS D1.1, AWS D1.8; DSA IR 17-2.
S/A6c: Not used.	N/A
S/A6d: Not used.	N/A
S/A6e: Not used.	N/A

S/A7. STEEL JOISTS AND TRUSSES:	
Test or Special Inspection	Code References and Notes
S/A7a: Fabrication Verify size, type and grade for all chord and web members as well as connectors and weld filler material; verify joist profile, dimensions and camber (if applicable); verify all weld locations, lengths and profiles; mark or tag each joist.	1705A.2.3, Table 1705A.2.3; AWS D1.1; DSA IR 22-3 for steel joists only. 1705A.2.4; AWS D1.3 for cold-formed steel trusses.

S/A8. SPRAYED FIRE-RESISTANT MATERIALS:	
Test or Special Inspection	Code References and Notes
S/A8a: Surface and Installation Examine structural steel surface conditions, inspect application, take samples, measure thickness and verify compliance of all aspects of application with DSA-approved documents.	1705A.15, 1705A.15.1, 1705A.15.2, 1705A.15.3, 1705A.15.4, 1705A.15.5, 1705A.15.6.
S/A8b: Density Test density.	1705A.15.1, 1705A.15.5, ASTM E605
S/A8c: Bond: Adhesion/Cohesion Bond strength adhesion/cohesion.	1705A.15.1, 1705A.15.6, ASTM E736

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

S/A9. ANCHOR BOLTS AND ANCHOR RODS:	
Test or Special Inspection	Code References and Notes
S/A9a: Anchor Rods and Bolts Anchor Bolts and Anchor Rods	Identify, sample and test anchor bolts and anchor rods not meeting exemptions identified in Section 1 of IR 17-11.
S/A9b: Other Threaded Rods Threaded rod not used for foundation anchorage.	Identify, sample and test threaded rods not meeting exemptions identified in Section 1 of IR 17-11.

S/A10. STORAGE RACK SYSTEMS:	
Test or Special Inspection	Code References and Notes
S/A10a: Material Verification Materials used, to verify compliance with one or more of the material test reports in accordance with the approved construction documents.	Table 1705A.13.7
S/A10b: Fabrication Fabricated storage rack elements.	1704A.2.5; Table 1705A.13.7
S/A10c: Anchorage Storage rack anchorage installation.	ANSI/MH16.1 Section 7.3.2; Table 1705A.13.7
S/A10d: Completed System Completed storage rack system to indicate compliance with the approved construction documents.	Table 1705A.13.7; * May be preformed by the project inspector when specifically approved by DSA.

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

W1. PREFABRICATED WOOD TRUSSES:	
Test or Special Inspection	Code References and Notes
W1a: Open Web Truss Fabrication Inspect fabrication of manufactured open-web trusses.	1705A.5.6 ; DSA IR 23-8.
W1b: Metal Plate Truss Fabrication Inspect fabrication of manufactured metal-plate- connected trusses.	1705A.5.6, 1705A.5.7 ; DSA IR 23-4.

W2. MANUFACTURED WOOD STRUCTURAL ELEMENTS:	
Test or Special Inspection	Code References and Notes
W2a: GLS Timber Fabrication Inspect fabrication of structural glued-laminated timber.*	* See 1705A.5.5 for exceptions
W2b: CLT Fabrication Inspect fabrication of cross-laminated timber.	1705A.5.5
W2c: Mass Timber Erection Inspect erection of mass timber.	Table 1705A.5.3 , Item 2
W2d: Connections Type A Inspect mass timber connections with threaded fasteners, bolts, and/or adhesive anchors other than described in item e below. Inspect concealed mass timber connections.	Table 1705A.5.3 , Items 3.1, 3.3, 3.4, 3.5. For threaded fasteners: Verify use of proper installation equipment. Verify use of pre-drilled holes where required. Inspect screws, including diameter, length, head type, spacing, installation angle, and depth.
W2e: Connections Type B Inspect mass timber connections with adhesive anchors installed in a horizontal or upward orientation.	Table 1705A.5.3 , Item 3.2
W2f: Sealants Inspect application of sealants or adhesives applied to mass timber elements.	1705A.20

EXEMPTIONS

<p>SOILS - EXEMPTIONS:</p> <p>Soils: Eligible shallow foundation elements Shallow foundations, are exempt from special inspections and testing by a Geotechnical Engineer for the following cases: A) buildings without a geotechnical report and meeting the exception Item #1 criteria in CBC Section 1803A.2 supported by native soil (any excavation depth) or fill soil (not exceeding 12" depth per CBC, Section 1804A.6), B) soil scarification/recompaction not exceeding 12" depth, C) native or fill soil supporting exterior non-structural flatwork (e.g., sidewalks, site concrete ramps, site stairs, parking lots, driveways, etc.), D) unpaved landscaping and playground areas, or E) utility trench backfill with depth not exceeding 12". These exempt structures shall be identified on the approved construction documents.</p> <p>Soils: Eligible deep foundation elements, Type 1 Deep foundation acting as cantilever footing with a design based on minimum allowable pressures per CBC Table 1806A.2 and without a geotechnical report are exempt from special inspection and testing by a Geotechnical Engineer for the following cases: A) free standing sign or scoreboard, B) cell or antenna towers and poles less than 35'-0" tall (e.g., lighting poles, flag poles, poles supporting open mesh fences, etc.). These exempt structures shall be identified on the approved construction documents.</p> <p>Soils: Eligible deep foundation elements Type 2 Deep foundation acting as cantilever footing with a design based on minimum allowable pressures per CBC Table 1806A.2 and without a geotechnical report are exempt from special inspection and testing by a Geotechnical Engineer for the following cases: A) single-story open fabric shade structure, or B) covered walkway structure with an apex height less than 10'-0" above adjacent grade. These exempt structures shall be identified on the approved construction documents.</p>
<p>CONCRETE/MASONRY - EXEMPTIONS:</p> <p>Concrete/Masonry: Eligible post-installed anchors Post-installed anchors for the following: A) exempt non-structural components (e.g., mechanical, electrical, plumbing equipment – see item 7 for "Welding" in the Appendix below) given in CBC Section 1617A.1.18 or B) interior nonstructural wall partitions meeting criteria listed in exempt item 3 for "Welding" in the Appendix below.</p> <p>Concrete: Batch plant inspection for items listed in and complying with CBC Section 1705A.3.3.2. Concrete batch plant inspection is not required for items given in CBC Section 1705A.3.3.2 subject to the requirements and limitations in that section.</p> <p>Concrete: Epoxy shear dowels in nonstructural slab-on-grade per CBC Section 1910A.5.4, Exception #4. Epoxy shear dowels in site flatwork and/or other nonstructural concrete.</p> <p>Concrete/Masonry: Reinforcing bar testing for items listed in and complying with CBC Section 1910A.2. Testing of reinforcing bars is not required for items given in CBC Section 1910A.2 subject to the requirements and limitations in that section. These exempt structures shall be identified on the approved construction documents.</p> <p>Masonry: Freestanding site walls and retaining walls per DSA IR 21-1. Freestanding and site retaining masonry walls may be exempt from certain DSA masonry testing and special inspection items as allowed per DSA IR 21-1.</p> <p>Eligible precast elements Structural tests and special inspections are not required for the following concrete precast elements. Provide a certificate of compliance at delivery. Exemptions shall be identified on the approved construction documents.</p> <ol style="list-style-type: none"> 1. Underground vaults no greater than 5 feet x 5 feet x unlimited height and pipe manufactured to an ASTM standard, 5 foot or less in diameter. 2. Elements manufactured in a PCI or NPCA certified manufacturing plant:

Project Name: **Las Positas College**

School District: **Chabot-Las Positas Community College District**

Application No.: **01-121987** Increment: **2**

File No.: **1-C2**

Appendix: LIST OF STRUCTURAL TESTS AND SPECIAL INSPECTIONS

A.	Underground vaults no greater than 16 feet in both length and width, of unlimited height, not subject to loading greater than HS 20-44.
B.	Pipe.
C.	Stair treads, landing planks.

WELDING - EXEMPTIONS:	
Welding: Eligible fences and gates Fences, gates with maximum leaf span of 10', and gates with a maximum rolling section of 10' all having an apex height less than 8'-0" above lowest adjacent grade.	
Welding: Eligible railing and ramps Handrails, guardrails, and modular or relocatable ramps associated with walking surfaces less than 30" above adjacent grade; fillet welds shall not be ground flush.	
Welding: Eligible interior cold-formed steel framing Non-bearing non-shearwall interior cold-formed steel framing spanning less than 15'-0" in height and header less than 10'-0" in opening width, such as in interior partitions, interior soffits, etc.	
Welding: Eligible equipment curbs Manufactured support frames and curbs using hot rolled or cold-formed steel (i.e., light gauge) for mechanical, electrical, or plumbing equipment weighing less than 2000# (equipment only) (connections of such frames to superstructure elements using welding will require special inspection.)	
Welding: Eligible components supporting MEP distribution systems Manufactured components (e.g., Tolco, B-Line, Afcon, etc.) for mechanical, electrical, or plumbing hanger support and bracing (connections of such components to superstructure elements using welding will require special inspection.)	
Welding: Eligible mounts and recreational equipment TV Brackets, projector mounts with a valid listing (see DSA IR A-5) and recreational equipment (e.g., playground structures, basketball backstops, etc.) (connections of such elements to superstructure elements using welding will require special inspection.)	
Welding: Eligible nonstructural components Any support for exempt non-structural components given in CBC Section 1617A.1.18 meeting the following: A) when supported on a floor/roof, <400# and resulting composite center of mass (including component's center of mass) ≤4' above supporting floor/roof, B) when hung from a wall or roof/floor, and <20# for discrete units or <5 plf for distributed systems.

END OF TABLE OF CONTENTS

SECTION 011100 - SUMMARY OF WORK

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes summary of work including:
 - 1. Work covered by Contract Documents
 - 2. Bid items and Allowances
 - 3. Work sequence
 - 4. Cooperation of contractor and coordination with other work
 - 5. Maintenance
 - 6. Occupancy requirements
 - 7. Reference Standards
 - 8. Products ordered in advance
 - 9. District furnished products
 - 10. Specification and Drawing Conventions

1.2 WORK COVERED BY CONTRACT DOCUMENTS

- A. SCOPE OF WORK: Increment II - New Building 1500 and Building 1800 Renovations
- B. The work shall include all work shown and specified except for work indicated "N.I.C" or "Not in Contract".
- C. The Contractor must maintain access to the existing buildings at all times during the project. The contractor is to provide secure fencing and/or barricades to keep the general public from entering exterior work areas and contractor laydown areas. Fencing is required to have a privacy screen.
- D. Unless provided otherwise in the Contract Documents, all risk of loss of Work covered by the Contract Documents shall rest with the Contractor until Final Completion and Acceptance of the Work.

1.3 BID ITEMS AND ALLOWANCES

- A. Base Bid - Furnish and install all work shown on Drawings and described in Specifications and all other Contract Documents, including connections to existing systems for a complete and operational product.
- B. Allowances - A District's unspecified allowance is as noted in Paragraph 1.1 of the Bid Proposal. Other Allowances may be required to be determined.

1.4 WORK SEQUENCE

- A. The contractor shall coordinate their work with the Construction Manager. Work will be performed on an active college campus. Campus buildings are generally in use from 7:30 AM to 10:30 PM Monday through Friday and 7:30 AM to 5:30 PM on Saturday. Contractor shall provide to the Construction Manager a sequence of work and regular updates as agreed upon in the pre-construction meeting.

1.5 COOPERATION OF CONTRACTOR AND COORDINATION WITH OTHER WORK.

- A. Should construction work, or work of any other nature, be underway by District or other forces or by other contractors within or adjacent to the limits of the Work at the time the Work was advertised for bids, the Contractor shall cooperate with all such other contractors or forces to the end that any delay or hindrance to their work will be avoided. The cost of such cooperation will be considered as included in the prices bid and no direct or additional payment will be made therefore. Contractor shall coordinate with such other contractors and forces as required by General Conditions.

- B. District reserves the right to perform other or additional work, within or adjacent to the limits of the work specified, at any time by the use of other forces. Contractor shall coordinate with District and any District forces, or other forces, engaged by District, as required by General Conditions. In the event that the performance of such other or additional work materially increases or decreases Contractor's costs, the work and the amount to be paid therefore will be appropriately adjusted as determined by the Construction Manager.
- C. Limit use of the Site for Work and for construction operations to allow for:
 - 1. District operation
 - 2. Work by other contractors and tenants
- D. Coordinate use of the Site and access to site with other contractors, utilities, and District forces, as required by General Conditions. Construction Manager has final authority over coordination, use of the Site, and access to site.
- E. Cooperate with District and others who may occupy and begin work on site and inside building prior to completion of Work of this Contract.
- F. Cooperate with contractors for other area work, not included in Contract, but which may take place during construction period.

1.6 MAINTENANCE

- A. Cost of maintenance of systems and equipment prior to Final Acceptance will be considered as included in prices bid and no direct or additional payment will be made therefore.

1.7 OCCUPANCY REQUIREMENTS

- A. Whenever, in the opinion of Construction Manager, Work or any part thereof is in a condition suitable for use, and the best interest of District requires such use, District may take beneficial occupancy of and connect to, open for public use, or use the Work or such part thereof. In such case, District will request Architect/Engineer to inspect the Work or part thereof, and issue a Certificate of Substantial Completion for that part of Work.
- B. Prior to date of Final Acceptance of the Work by District, all necessary repairs or renewals in Work or part thereof so used, due to ordinary wear and tear, or due to defective materials or workmanship or to operations of Contractor, shall be made at expense of Contractor, as required in General Conditions.
- C. Use by District of Work or part thereof as contemplated by this section shall in no case be construed as constituting acceptance of Work or any part thereof. Such use shall neither relieve Contractor of any responsibilities under Contract, nor act as waiver by District of any of the conditions thereof.
- D. District may specify in the Contract Documents that portions of the Work, including electrical and mechanical systems or separate structures, shall be substantially completed on milestone dates prior to substantial completion of all of the Work. Contractor shall notify Architect/Engineer in writing when Contractor considers any such part of the Work ready for its intended use and substantially complete and request Architect/Engineer to issue a Certificate of Substantial Completion for that part of the Work.

PART 2 - PRODUCTS

2.1 REFERENCE STANDARDS

- A. For products specified by association or trade standards, comply with requirements of standard, except where more rigid requirements are specified or are required by applicable codes.

2.2 PRODUCTS ORDERED IN ADVANCE

- A. If products are ordered by the District or Contractor in advance provide list of products, model and date or order here. If none are provide include "Not Applicable".

2.3 DISTRICT FURNISHED PRODUCTS

- A. District furnished products as specified, if any, are indicated on Construction Documents.

PART 3 - EXECUTION

3.1 SPECIFICATION AND DRAWING CONVENTIONS

- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 - 1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
 - 2. Text Color: Text used in the Specifications, including units of measure, manufacturer and product names, and other text may appear in multiple colors or underlined as part of a hyperlink; no emphasis is implied by text with these characteristics.
 - 3. Hypertext: Text used in the Specifications may contain hyperlinks. Hyperlinks may allow for access to linked information that is not residing in the Specifications. Unless otherwise indicated, linked information is not part of the Contract Documents.
 - 4. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.
- C. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:
 - 1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
 - 2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings, indicated in the Specifications, and as published as part of the U.S. National CAD Standard.
 - 3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

END OF SECTION

SECTION 012200 - UNIT PRICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for unit prices.
- B. Related Requirements:
 - 1. Section 012600 "Contract Modification Procedures" for procedures for submitting and handling Change Orders.
 - 2. Section 014000 "Quality Requirements" for field testing by an independent testing agency.

1.2 DEFINITIONS

- A. Unit price is an amount incorporated into the Agreement, applicable during the duration of the Work as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.

1.3 PROCEDURES

- A. Unit prices include all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead, and profit.
- B. Measurement and Payment: See individual Specification Sections for work that requires establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections.
- C. Owner reserves the right to reject Contractor's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Contractor.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

- A. Unit Prices, General: Refer to Sections indicateing Unit Prices and referring to this Section.

END OF SECTION 012200

SECTION 012600 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. This section describes general procedural requirements for alterations, modifications and extras.
- B. Related Sections
 - 1. Section 011100: Summary of Work

1.2 GENERAL

- A. Any change in scope of work or deviation from Drawings or Specifications shall be accomplished only when authorized in writing by Construction Manager in accordance with General Conditions Article 9. As appropriate, change orders are subject to approval by the Division of the State Architect. Refer to section 4-338, Part 1, Title 24, California Code of Regulations, and the CLPCCD Board of Trustees as appropriate.
- B. Changes in the scope of Work or deviation from Drawings or Specification may not be initiated by use of the following methods:
 - 1. Request for Information (RFI): Request for information shall be in accordance with General Conditions Paragraph 3.1.10. If a change in scope or cost is required by the Architect/Engineer response to the RFI the contractor shall submit a change order request per Article 9 of the General Conditions
 - 2. Request for Substitution (RFS) Request for alternates or substitutes shall be in accordance with General Conditions Paragraph 4.8.2.
- C. Changes in scope of Work or deviation from Drawings or Specifications may be initiated only by the Contractor or the Construction Manager.
 - 1. Contractor may initiate changes by submitting: Change Order Request; Notice of Concealed or Unknown Conditions, or Notice of Hazardous Waste Conditions.
 - a. Notices of Changes shall be submitted in accordance with paragraph 9.6 of General Conditions.
 - b. Notices of Hazardous Waste Conditions shall be submitted in accordance with paragraph 4.17 of General Conditions.
 - c. Notices of concealed or unknown conditions shall be submitted to make Owner aware of a potential change in scope of the work.
 - 2. Contractor shall be responsible for its costs to implement and administer RFI's and RFS's throughout the Contract duration. Regardless of the number of RFI's submitted, Contractor will not be entitled to additional compensation. Contractor shall be responsible for both CLPCCD's and Architect's administrative costs for answering its RFI's where the answer could reasonably be found by reviewing the Contract Documents, as determined by CLPCCD; such costs will be deducted from progress payments, in accordance with General Conditions 3.1.10.
 - 3. Architect/Engineer may initiate changes by issuing a Supplemental Instruction (which shall require written approval of the Construction Manager).
 - 4. Construction Manager may initiate changes by issuing Requests for Proposal (RFP) or a Field Change Notice (FCN) to Contractor. Such RFP's or FCN's will detail all proposed changes in the Work and request a quotation of changes in Contract Sum and Contract Times from Contractor. A RFP or FCN may require Contractor to expedite the work and proceed on a time and material (force account) basis.

1.3 PROCEDURE

- A. Contractor shall submit RFI to Construction Manager. Contractor shall reference each RFI to an activity on its Progress Schedule and note the time criticality of the RFI, indicating the time in which the response is required. Architect/Engineer shall respond by issuing a Clarification.
 - 1. If Contractor is satisfied with the Clarification and does not request change in Contract Sum or Contract Times, then the Clarification shall be executed without a change.
 - 2. If Contractor believes that the Clarification results in change in Contract Sum or Contract Times, Contractor shall notify Construction Manager who may then deny request for change or issue RFP.
- B. Contractor shall submit RFS to Construction Manager within 35 days of award of contract in accordance with General Conditions paragraph 4.8.
- C. Contractor shall submit Notices of Changes to resolve unanticipated conditions incurred in the execution of the Work. Procedures in Paragraph 9.6 of General Conditions shall be followed. If Construction Manager determines that a change in Contract Sum or contract Times is justified, Construction Manager shall issue RFP.
- D. Contractor shall submit Notices of Hazardous Waste Conditions to resolve problems regarding hazardous materials encountered in the execution of the Work. Procedures in Paragraph 4.17 of General Conditions shall be followed. If Construction Manager determines that a change in Contract Sum or contract Times is justified, Construction Manager shall issue RFP.
- E. Architect/Engineer shall issue Supplemental Instruction to the Construction Manager who shall forward onto Contractor. Contractor shall not proceed with Supplemental Instruction until Construction Manager approves it in writing.
 - 1. If Contractor is satisfied with Supplemental Instruction and does not request change in Contract Sum or Contract Times, then Supplemental Instruction shall be executed without a Change Order.
 - 2. If Contractor believes that Supplemental Instruction results in change in Contract Sum or Contract Times, Contractor shall notify Construction Manager. Construction Manager may then deny request for change, cancel Clarification or issue RFP.
- F. Responses by recipients shall be within a reasonable time.
- G. Contractor shall respond to Construction Manager's RFP within fifteen (15) working days by furnishing a complete breakdown of costs of both credits and extras; itemizing materials, labor, taxes, overhead and profit. Subcontract work shall be so indicated.
- H. Upon approval of RFP, Construction Manager will issue a Change Order directing Contractor to proceed with extra work.
- I. Payment shall be made as follows:
 - 1. Change Orders which increase Contract Sum or Contract Times shall be included in next Contract Modification Form, signed by Construction Manager, accepted by Contractor.
 - 2. Payment shall be made for Change Order work along with other work in progress payment following completion of Change Order work. Partial completion of Change Order work shall be paid for that part completed during the period covered by the monthly payment request.

1.4 COST DETERMINATION

- A. Total cost of extra work shall be the sum of labor costs, material costs, equipment rental costs and specialist costs as defined herein plus overhead and profit as allowed herein. This limit applies in all cases of claims for extra work, whether calculating Change Orders, or calculating claims of all types, and applies even in the event of fault, negligence, strict liability, or tort claims of all kinds, including misrepresentation, concealment, strict liability or negligence. No other costs arising out of or connected with the performance of extra work, of any nature, may be recovered by Contractor. No special, incidental or consequential damages may be claimed or recovered against CLPCCD, its representatives or agents, whether arising from breach of contract, negligence or strict liability, unless specifically authorized in the Contract Documents.
- B. Overhead:
 - 1. Overhead shall be as defined in Paragraph 1.08.
- C. Taxes:
 - 1. Alameda County Sales Tax should be included.
 - 2. Federal and Excise Tax shall not be included.
- D. Owner Operated Equipment: When owner-operated equipment is used to perform extra work, Contractor will be paid for equipment and operator as follows:
 - 1. Payment for equipment will be made in accordance with Paragraph 1.05. C.
 - 2. Payment for cost of labor will be made at no more than rates of such labor established by California prevailing wage agreements for type of worker and location of work, whether or not owner-operator is actually covered by such an agreement.

1.5 COST BREAKDOWN

- A. Labor - Contractor will be paid cost of labor for workers (including fore persons when authorized by Construction Manager) used in actual and direct performance of extra work. Labor rate, whether employer is Contractor, subcontractor or other forces, will be sum of following:
 - 1. **Actual Wages** - Actual wages paid shall be limited to the applicable prevailing wage rate for the classification of labor actually and reasonably necessary to complete a Change. Prevailing wage rates shall be deemed to include all direct payment of wages to workers completing a Change and all employer burdens thereon, including without limitation all employer payments to or on behalf of workers for Workers Compensation, health and welfare, pension, vacation and other similar labor burdens. Contractors and subcontractors are required to provide their corresponding wage rate breakdown for the classification of labor under which they will complete a Change and on the form provided by the Owner for review and approval by the Owner and Construction Manager prior to processing and approval of payment for any completed Change.
- B. Material - Only materials furnished by Contractor and necessarily used in performance of extra work will be paid for. Cost of such materials will be cost, including sales tax, to purchaser (Contractor, subcontractor or other forces) from supplier thereof, except, as the following are applicable:
 - 1. If cash or trade discount by actual supplier is offered or available to purchaser, it shall be credited to the District notwithstanding fact that such discount may not have been taken.
 - 2. For materials salvaged upon completion of extra work, salvage value of materials shall be deducted from cost, less discount, of materials.
 - 3. If cost of a material is, in opinion of Construction Manager, excessive, then cost of material shall be deemed to be lowest current wholesale price at which material is available in quantities concerned delivered to Site, less any discounts as provided in subparagraph 1 above.

- C. Equipment Rental - For Contractor or subcontractor-owned equipment, payment will be made at the lesser of actual rental rates or the rental rates listed for equipment in California Department of Transportation official equipment rental rate schedule which is in effect on date upon which extra work is accomplished and which schedule is incorporated herein by reference as though fully set forth herein. For rented equipment, payment will be made based on actual rental invoices. Equipment used on extra work shall be of proper size and type. If, however, equipment of unwarranted size or type and cost is used, cost of use of equipment shall be calculated at rental rate for equipment of proper size and type. Rental rates paid shall be deemed to cover cost of fuel, oil, lubrication, supplies, small tools, necessary attachments, repairs and maintenance of any kind, depreciation, storage, insurance, and all incidentals. Unless otherwise specified, manufacturer's ratings, and manufacturer-approved modifications, shall be used to classify equipment for determination of applicable rental rates. Individual pieces of equipment or tools not listed in said publication and having a replacement value of five hundred dollars (\$500) or less, whether or not consumed by use, shall be considered to be small tools and no payment will be made therefore as payment is included in payment for labor. Rental time will not be allowed while equipment is inoperative due to breakdowns.
1. For equipment on Site, rental time to be paid for equipment shall be the time equipment is in operation on extra work being performed. The following shall be used in computing rental time of equipment:
 - a. When hourly rates are listed, less than thirty (30) minutes of operation shall be considered to be one-half (1/2) hour of operation.
 - b. When daily rates are listed, less than four (4) hours of operation shall be considered to be one-half (1/2) day of operation. Anything over four (4) hours and not more than eight (8) hours is considered one (1) full day of operation.
 2. For equipment, which must be brought to Site to be used exclusively on extra work, cost of transporting equipment to Site and its return to its original location shall be determined as follows:
 - a. District will pay for costs of loading and unloading equipment.
 - b. Cost of transporting equipment in low bed trailers shall not exceed hourly rates charged by established haulers.
 - c. Cost of transporting equipment shall not exceed applicable minimum established rates of California Public Utilities Commission.
 - d. Payment for transporting, and loading and unloading equipment as above provided will not be made if equipment is used on Work in any other way than upon extra work.
 3. Rental period shall begin at time equipment is unloaded at Site of extra work and terminate at end of day on which Construction Manager directs Contractor to discontinue use of equipment. Excluding Saturdays, Sundays, and legal holidays, unless equipment is used to perform extra work on such days, rental time to be paid per day shall be four (4) hours for zero (0) hours of operation, six (6) hours for four (4) hours of operation and eight (8) hours for eight (8) hours of operation, time being prorated between these parameters. Hours to be paid for equipment, which is operated less than eight (8) hours due to breakdowns, shall not exceed eight (8) less number of hours equipment is inoperative due to breakdowns.
- D. Work Performed by Special Forces or Other Special Services - When Construction Manager and Contractor, by agreement, determine that special service or item of extra work cannot be performed by forces of Contractor or those of any subcontractors, service or extra work item may be performed by specialist. Invoices for service or item of extra work on basis of current market price thereof may be accepted without complete itemization of labor, material, and equipment rental costs when it is impracticable and not in accordance with established practice of special service industry to provide complete itemization. In those instances, wherein, Contractor is required to perform extra work necessitating a fabrication or machining process in a fabrication or machine shop facility away from Site, charges for that portion of extra work performed in such facility may, by agreement, be accepted as a specialist billing. Construction Manager must be notified in advance of all offsite work. To specialist invoice price, less credit to District for any cash or trade discount offered or available, whether or not such discount may have been taken, will be added 15 percent (15%) in lieu of overhead and profit provided in Paragraph 1.04.B.

1.6 FORCE-ACCOUNT

- A. If it is impracticable because of nature of work, or for any other reason, to fix an increase or decrease in price definitely in advance, Change Order may fix a maximum price which shall not under any circumstances be exceeded, and subject to such limitation, such alteration, modification or extra shall be paid for at actual necessary cost as determined by District Authority, which cost shall be determined pursuant to Article 1.04, and shall be known as Force-Account work.
- B. Whenever any Force-Account work is in progress, definite price for which has not been agreed on in advance, Contractor shall report to Construction Manager each day in writing in detail amount and cost of labor and material used, and any other expense incurred in Force-Account work on preceding work day, and no claim for compensation for Force-Account work will be allowed unless report shall have been made. Daily report(s) shall be delivered to Construction Manager within one (1) business day of the day the work was performed. No late reports will be accepted. The intent is to have daily agreement on hours expended for labor and equipment on Force-Account work.
- C. Above described methods of determining payment for work and materials shall not apply to performance of work or furnishings of material, which, in judgment of Construction Manager, may properly be classified under items for which prices are established in Contract.

1.7 DISTRICT FURNISHED MATERIALS

- A. District reserves right to furnish materials, as it deems advisable, and Contractor shall have no claims for costs and overhead and profit on such materials.

1.8 OVERHEAD DEFINED

- A. The following constitutes charges that are included in overhead for all contract modifications, including Force-Account work:
 - 1. Drawings: field drawings, shop drawings, etc. including submissions of drawings
 - 2. Routine field inspection of work proposed
 - 3. General Superintendence
 - 4. General administration and preparation of change orders
 - 5. Computer services
 - 6. Reproduction services
 - 7. Salaries of project engineer, Construction Manager, superintendent, timekeeper, storekeeper and secretaries
 - 8. Janitorial services
 - 9. Temporary on-site facilities:
 - a. Offices
 - b. Telephones
 - c. Plumbing
 - d. Electrical: Power, lighting
 - e. Platforms
 - f. Fencing, etc.
 - 10. Home office expenses
 - 11. Insurance Premium
 - 12. Procurement and use of vehicles and fuel used coincidentally in base bid work
 - 13. Surveying
 - 14. Estimating
 - 15. Protection of work
 - 16. Final cleanup
 - 17. Other incidental work
 - 18. Record Drawings
 - 19. Warranty
 - 20. Transportation expense to site for labor

1.9 RECORDS AND CERTIFICATION

- A. Force-Account (cost reimbursement) charges shall be recorded daily upon Cost Breakdown for Contract Modification Form obtained from Inspector. Contractor or authorized representative shall complete and sign form. Inspector shall sign form for approval. Contract Modification Form shall provide names and classifications of workers and hours worked by each, itemize materials used, and also list size type and identification number of equipment, and hours operated, and shall indicate work done by specialists.
- B. No payment for Force-Account work shall be made until Contractor submits original invoices substantiating materials and specialist charges.
- C. District shall have the right to audit all records in possession of Contractor relating to activities covered by Contractor's claims for modification of Contract, including Force-Account work, as set forth in General Conditions.
- D. Further, District shall have right to audit, inspect, or copy all records maintained in connection with this Contract, including financial records, in possession of Contractor relating to any transaction or activity occurring or arising out of, or by virtue of, Contract. If Contractor is a joint venture, right of District shall apply collaterally to same extent to records of joint venture sponsor, and of each individual joint venture member.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

Sample Cost Breakdown form attached.

SAMPLE ONLY

COST BREAKDOWN FORM FOR CONTRACT MODIFICATION

One separate form shall be used by Contractor, each first tier subcontractor and each lower tier subcontractor. One form for each shall be used for each change order. One form for each, for each day shall be used for Force-Account work.

SECTION 013100 - PROJECT COORDINATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Project coordination.
- B. Field engineering.
- C. Coordination drawings.
- D. Workmanship.
- E. Incidental costs.
- F. Correspondence and Notices.
- G. Miscellaneous provisions.
- H. Damage and restoration.

1.2 RELATED SECTIONS

- A. Section 011100 - Summary of Work.
- B. Section 014500 - Quality Control.
- C. Section 015000 – Temporary Facilities.
- D. Section 017000 - Contract Closeout.

1.3 PROJECT COORDINATION

- A. Coordination scheduling, submittals, and Work of the various Sections of specifications to assure efficient and orderly sequence of installation of interdependent construction elements, with provisions for accommodating items installed later.
- B. Verify that utility requirement characteristics of operating equipment are compatible with building utilities. Coordinate work of various Sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.
- C. Coordinate space requirements and installation of mechanical and electrical work, which are indicated diagrammatically on drawings. Follow route shown for pipes, ducts, and conduit, as closely as practicable: place runs parallel with line of building. Utilize space efficiently to maximize accessibility for other installations, for maintenance, and for repairs.
- D. In finished areas except as otherwise indicated, conceal pipes, ducts, and wiring within the construction. Coordinate locations of fixtures and outlets with finished elements.
- E. Submit a copy of site drawing and certificate signed by the Civil Engineer that the elevations and locations of the Work of separate Sections in preparation for Substantial Completion.
- F. Coordinate completion and cleanup of Work of separate Sections in preparation for Substantial Completion.

- G. After Owner occupancy of the Site, coordinate access to site for correction of defective Work and Work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

1.4 FIELD ENGINEERING

- A. Contractor shall locate and protect survey control and reference points.
- B. Control datum for survey is that shown on drawings.
- C. Contractor shall verify setbacks and easements; confirm drawing dimensions and elevations.
- D. Provide field engineering services. Contractor shall establish lines, and levels, utilizing recognized engineering practices

1.5 COORDINATION DRAWINGS

- A. Provide information required by Architect for preparation of coordination drawings.
- B. Review drawings prior to submission to Architect.

1.6 WORKMANSHIP

- A. Work shall be performed by craftsmen well experienced and competent in their particular trade.
- B. Workmanship shall be thorough, finished and complete in every detail for finest quality installations as intended under these specifications.

1.7 INCIDENTAL COSTS

- A. In addition to cost associated with General Conditions Article 6: Insurance; Indemnity; Bonds:
 - 1. Utilities: Refer to Section 015000.
 - 2. Contractors and Subcontractors shall furnish at their own cost and expense all tools, consumable supplies, appliances, equipment, etc., necessary for execution of their work; and shall be responsible for care and guarding thereof.
 - 3. Contractors and Subcontractors shall be entirely responsible for professional, trade, business or other licenses required by state statute or local government.

1.8 CORRESPONDENCE AND NOTICES

- A. Clearly identify correspondence, notices and submittals with project name, subject and detailed references to drawings and specifications.
- B. Notify Inspector or the Construction Manager two (2) working days in advance of required inspection.
- C. The District's project management system (ProjectTeams) shall be utilized for document controls for RFI, Submittals, Daily Logs, etc...

1.9 MISCELLANEOUS PROVISIONS

- A. Contractor shall immediately refer to the Construction Manager any requirement shown or specified which Contractor in their experience and background finds or believes:
 - 1. Is not equal to industry standards for achieving a first quality installation as intended;
 - 2. Is excessive in cost or effort to affect the intended results;
 - 3. Is below standard for proper enforcement of the guarantees required;
 - 4. Or, is at variance with governing laws, regulations, codes or standards.

- B. Work operations relative to any matter referred to Architect for consideration shall not proceed until receipt of appropriate instructions from Architect.
- C. Inspection of Work and Materials: Contractor shall immediately make a close and thorough inspection of all materials as delivered and all work in progress; shall promptly reject and return all defective materials and re-do; and shall check and verify adequate performance or satisfactory results of all tests and inspections before allowing sub-work to proceed.
- D. Warranty Period: During warranty periods, supervise investigation and correction of deficiencies found or occurring in the work.
- E. Shop Fabricate and pre-assemble interrelated parts where possible.
- F. Closing up of walls, partitions or furred spaces, backfilling and other covering up operations shall not proceed until all enclosed or covered work and inspections have been completed. Verify before proceeding.
- G. Provide holes, slots, cutouts, blocking, screeds, nailers, chases and similar preparation as the work progresses, as required to receive or pass subsequent work without damage to previously completed work.
- H. Exterior Work shall be made tight against direct or indirect entry of water into the concealed or interior spaces of the building. Seal joints or penetrations below grade or behind exterior trim and other conditions where water might enter the structure, as for exposed exterior work.
- I. Structural Connections and Fasteners: Include as required for complete fabrication and installation of the work; of materials, types and sizes adequate for the purposes.
 - 1. Place in concealed or obscured locations where possible.
 - 2. Include suitable welding or brazing where required.
- J. Powder Activated Fasteners: Limited to uses particularly shown, specified or approved by Architect. Operators shall be certified in accordance with California Industry Safety orders.
- K. Ferrous Work permanently exposed to exterior or below grade shall be galvanized; related accessory members and fastening non-ferrous, galvanized or made rustproof by approved methods.
- L. Galvanizing, prime painting and related touch-up and repair shall comply with requirements for metal fabricating and painting per project technical specifications.
- M. Isolation: Provide between ferrous and non-ferrous or dissimilar metal components to protect the work against electrolysis, as follows:
 - 1. For architectural work, provide cork fillers, asphaltic coatings, neoprene gaskets or similar separation as necessary; and use stainless steel fastenings only where interconnecting dissimilar parts.
 - 2. For mechanical and electrical work, provide dielectric unions or similar separation. In particular, provide isolation as necessary between exterior underground systems and interior above-grade systems where they meet dissimilar metals.
- N. Prior to starting a particular type or kind of work, examine for relevant information, all contract documents and subsequent data issued to the project.

1.10 DAMAGE AND RESTORATION

- A. Damage to previously existing or newly placed facilities caused by movement of equipment or other operations, whether accidental or made necessary by reason of Contract requirements, shall be restored or replaced as specified or directed by Architect or Construction Manager.

- B. Restoration shall be equal to the structural qualities or performance capacities of the original work, and finishes shall match the appearance of, as nearly as possible, like existing adjacent work. Restorations shall be subject to approval by Architect and shall be made as necessary at no added expense to Owner unless otherwise particularly provided for.
- C. Work not properly restored or where not capable of being restored as intended under these Specifications shall be removed and replaced as directed by Architect at no added expense to Owner.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 CUTTING AND PATCHING

- A. General: Comply with Section 017329 - CUTTING AND PATCHING.
- B. Employ skilled and experienced installer to perform cutting and patching.
- C. Submit written request in advance of cutting or altering elements, which affects:
 - 1. Structural integrity of element.
 - 2. Integrity of weather-exposed or moisture-resistant elements.
 - 3. Efficiency, maintenance, or safety of element.
 - 4. Visual qualities of sight-exposed elements.
- D. Execute cutting, fitting, and patching including excavation and fill, to complete Work, and to:
 - 1. Fit the several parts together, to integrate with other Work.
 - 2. Uncover Work to install or correct ill-timed work.
 - 3. Remove and replace defective and non-conforming Work.
 - 4. Remove samples of installed Work for testing.
 - 5. Provide openings in elements of Work for penetrations of mechanical and electrical Work.
- E. Execute work by methods, which will avoid damage to other Work, and provide proper surfaces to receive patching and finishing.
- F. Cut rigid materials using masonry saw or core drill.
- G. Restore Work with new products in accordance with requirements of Contract Document.
- H. Fit Work tight to pipes, sleeves, ducts, conduit, and other penetrations through surfaces.
- I. Maintain integrity of wall, ceiling, or floor construction; completely seal voids.
- J. Refinish surfaces to match adjacent finishes. For continuous surfaces, refinish to nearest intersection; for an assembly, refinish entire unit.
- K. Identify any hazardous substance or condition exposed during the Work to the Construction Manager for decision or remedy.

END OF SECTION

SECTION 013119 - PROJECT MEETINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. This section describes the required meetings for this work. These meetings include:
 - 1. Pre-construction Conference
 - 2. Scheduling Meetings
 - 3. Progress Meetings
 - 4. Special Meetings

- B. Related Sections
 - 1. Section 011100: Summary of Work
 - 2. Section 013200: Progress Schedules and Reports
 - 3. Section 013300: Submittals

1.2 PRECONSTRUCTION CONFERENCE

- A. Construction Manager will call for and administer Pre-construction Conference at time and place to be announced. Conference will occur as soon after award as can be reasonably scheduled.

- B. Contractor, all subcontractors, and major suppliers shall attend Pre-construction Conference.

- C. Agenda will include, but not be limited to, the following items:
 - 1. Schedules
 - 2. Personnel
 - 3. Use of the Site
 - 4. Temporary Utilities
 - 5. Location of Contractor's on-site facilities
 - 6. Project access
 - 7. Employee parking
 - 8. Security/Safety
 - 9. Housekeeping
 - 10. Submittals
 - 11. Inspection and testing procedures, on-site and off-site
 - 12. Utility shutdown procedures
 - 13. Control and reference point survey procedures
 - 14. Injury and Illness Prevention Program
 - 15. Contractor's Initial CPM Schedule
 - 16. Contractor Invoicing, Schedule of Values, Approval Procedures

- D. Construction Manager will distribute copies of minutes to attendees. Attendees shall have five (5) working days to submit comments or additions to minutes. Minutes will constitute final memorialization of results of the Pre-construction Conference.

1.3 SCHEDULING MEETINGS

- A. Meet with Construction Manager and Architect on Start Date of Contract and conduct initial review of Contractor's draft Shop Drawing and Sample Submittal Schedule, and draft Schedule of Values and Initial Construction Schedule ("Schedule Review Meeting").

- B. Authorized representative in Contractor's organization, designated in writing, who will be responsible for working and coordinating with Construction Manager's representative(s) and Architect relative to preparation and maintenance of Progress Schedule shall attend initial Schedule Review Meeting.

- C. Contractor shall, within thirty (30) days from the Notice to Proceed date, meet with Construction Manager and Architect to review the Original CPM Schedule submittal.
 - 1. Contractor shall have its manager, superintendent, scheduler, and key subcontractor representatives, as required by CLPCCD, in attendance. The meeting will take place over a continuous one-day period.
 - 2. CLPCCD's review of Schedule Submittals will be limited to conformance to Contract requirements, including, but not limited to, coordination requirements. However, review may also include:
 - a. Clarifications of Contract Requirements
 - b. Directions to include activities and information missing from submittal
 - c. Requests to Contractor to clarify its schedule
 - 3. Within five (5) days of the initial Schedule Review Meeting, Contractor shall respond in writing to all questions and comments expressed by CLPCCD at the meeting.
- D. Construction Manager will administer scheduling meetings and shall distribute minutes of scheduling meetings to attendees. Attendees shall have five (5) working days to submit comments or additions to minutes. Minutes will constitute final memorialization of results of the scheduling meetings.

1.4 PROGRESS MEETINGS

- A. Construction Manager and Architect will schedule and administer Progress Meetings throughout duration of Work. Progress meetings will be held weekly unless otherwise directed by Construction Manager.
 - 1. Meetings shall be held at Construction Manager's on-site office unless otherwise directed by Construction Manager.
 - 2. Construction Manager will prepare agenda and distribute to Contractor, Inspector and Architect/Engineer 24 hours in advance of meeting.
 - 3. Construction Manager will preside at meeting.
 - 4. Architect will record and distribute minutes to Contractor, Inspector, Construction Manager, all other participants, and those affected by decisions made at meeting, within three (3) working days after meeting. Attendees shall have five (5) working days to submit comments or additions to minutes. Minutes will constitute final memorialization of results of progress meetings.
- B. Progress Meetings shall be attended by Contractor's job superintendent, major subcontractors and suppliers, when requested by Construction Manager or as appropriate, Construction Manager, Architect/Engineer, Inspector and others as appropriate to agenda topics for each meeting.
- C. Agenda will contain the following items as appropriate:
 - 1. Review of work progress
 - 2. Status of Construction Schedule, adjustments
 - 3. Submittals
 - 4. Delivery schedules
 - 5. Utility shutdowns, traffic disruptions, and interferences with public scheduled during the subsequent 2 weeks
 - 6. Quality control
 - 7. Pending changes
 - 8. Substitutions
 - 9. Review of Contractor's safety program activities and results, including report on all serious injury and/or damage accidents
 - 10. Safety
 - 11. Other items affecting progress of work
- D. A separate meeting will be held on approximately the 25th of each month to review the schedule update submittal and progress payment application.
 - 1. At this meeting, at a minimum, the following items will be reviewed:
 - a. percent complete of each activity

- b. time impact evaluations for Change Orders and Time Extension Request
 - c. actual and anticipated activity sequence changes
 - d. actual and anticipated duration changes
 - e. actual and anticipated contractor delays
- 2. These meetings are considered a critical component of overall monthly schedule update submittal and Contractor shall have appropriate personnel attend. At a minimum, these meetings shall be attended by Contractor's General Superintendent and Scheduler.
 - 3. Contractor shall plan on progress meetings taking no less than four (4) hours.

1.5 SPECIAL MEETINGS

- A. Special meetings may be called by any party by notifying all desired participants, Construction Manager, Architect, and Inspector four (4) working days in advance, giving reason for meeting. Special Meetings may be held without advance notice in emergency situations.
- B. At any time during the progress of the Work, CLPCCD shall have authority to require Contractor to attend conference of any or all of the contractors engaged in the Work or in other work, and notice of such conference shall be duly observed and complied with by Contractor.
- C. Contractor shall schedule and conduct coordination meetings as necessary to discharge coordination responsibilities in the General Conditions. Construction Manager shall be given five (5) days written notice of coordination meetings. Contractors shall maintain minutes of coordination meetings. Attendees shall have five (5) working days to submit comments or additions to minutes. Minutes will constitute final memorialization of results of the meetings.
- D. Pre-installation meetings of manufactures' warranty scope of work, i.e., roofing, water-proofing, curtain wall, etc.
- E. LEED kick-off meeting.

PART 2 - PRODUCTS (Not used)

PART 3 - EXECUTION (Not used)

END OF SECTION

SECTION 013200 - PROGRESS SCHEDULE AND REPORTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Scheduling of Work under this Contract shall be performed by Contractor in accordance with requirements of this Section.
1. Development of schedule, cost and manpower loading of the schedule and schedule updates, monthly payment requests and project status reporting requirements of the Contract shall employ computerized Critical Path Method (CPM) scheduling.
 2. Submit schedules and reports as specified in General Conditions.
- B. Upon Award of Contract, Contractor shall immediately commence development of Initial and Original CPM Schedules to ensure compliance with CPM schedule submittal requirements.
- C. Related Sections:
1. Section 011100: Summary of Work
 2. Section 013300: Submittal Procedures
- D. Definitions: The following definitions apply to this section:
1. **ACTIVITY:** A task, event or other project element on a schedule that contributes to completing the project. Activities have a description, start date, finish date, duration and one or more logic ties.
 2. **BASELINE SCHEDULE:** The initial schedule representing the Contractor's work plan on the first day of the project.
 3. **CRITICAL PATH:** The longest continuous chain of activities for the project that has the least amount of total float of all chains. In general, a delay on the critical path will extend the scheduled completion date.
 4. **CRITICAL PATH METHOD (CPM):** A network based planning technique using activity durations and the relationships between activities to mathematically calculate a schedule for the entire project.
 5. **DATA DATE:** The day after the date through which a schedule is current. Everything occurring earlier than the data date is "as-built" and everything on or after the data date is "planned".
 6. **EARLY COMPLETION TIME:** The difference in time between an early scheduled completion date and the contract completion date.
 7. **FLOAT:** The difference between the earliest and latest start or finish times for an activity.
 8. **MILESTONE:** An event activity that has zero duration and is typically used to represent the beginning or end of a certain stage of the project.
 9. **NARRATIVE REPORT:** A document submitted with each schedule that discusses topics related to project progress and scheduling.
 10. **NEAR CRITICAL PATH:** A chain of activities with total float exceeding that of the critical path but having no more than 14 calendar days of total float.
 11. **SCHEDULED COMPLETION DATE:** The planned project finish date shown on the current accepted schedule.
 12. **SUBSTANTIAL COMPLETION:** The stage in the progress of the work when the work is complete in accordance with the Contract Documents, so that District can occupy or use the work for its intended purpose.
 13. **TIME IMPACT ANALYSIS:** A schedule and narrative report developed specifically to demonstrate what effect a proposed change or delay has on the current scheduled completion date.
 14. **TIME-SCALED NETWORK DIAGRAM:** A graphic depiction of a CPM schedule comprised of activity bars with relationships for each activity represented by arrows. The tail of each arrow connects to the activity bar for the predecessor and points to the successor.
 15. **TOTAL FLOAT:** The amount of time that an activity or chain of activities can be delayed before extending the scheduled completion date.

16. **UPDATED SCHEDULE:** A current schedule developed from the baseline or subsequent schedule through regular monthly review to incorporate as-built progress and any planned changes.

1.2 QUALIFICATIONS

- A. Contractor shall employ experienced scheduling personnel qualified to use the latest version of Primavera Project Planner or Microsoft Project scheduling software. Experience level required is set forth below. Contractor may employ such personnel directly or may employ a consultant for this purpose. After bid opening, the apparent successful low bidder shall provide District a written verification that Contractor has the required personnel under its employ or that Contractor will employ the required CPM scheduling consultant.
 1. The written statement shall identify individual who will perform CPM scheduling.
 2. Capability and experience shall be verified by description of construction projects on which individual has successfully applied computerized CPM.
 3. Required level of experience shall include at least two projects of similar nature, scope and value not less than three-fourths the Total Bid Price of this Project. The written statement shall provide contact persons for referenced projects with current telephone and address information.
- B. District reserves right to approve Contractor's scheduler, or consultant, and right to reject them at any time. District also reserves right to refuse replacement of Contractor's scheduler or consultant, if it believes such replacement will negatively affect Contract.

1.3 GENERAL

- A. Progress Schedule shall be based on and incorporate milestones and completion dates specified in Contract Documents. Submit to the Owner baseline, monthly updated, and final updated schedules, each consistent in all respects with the time and order of work requirements of the contract. Work must be executed in the sequence indicated on the current accepted schedule. Schedules must show the order in which you propose to execute the work with logical links between time-scaled work activities and calculations made using the critical path method to determine the controlling activities. You are responsible for assuring that all activity sequences are logical and that each schedule shows a coordinated plan for complete performance of the work.
- B. Overall time of completion and time of completion for each milestone shown on Progress Schedule shall adhere to times as stated in Contract Agreement, unless an earlier (advanced) time of completion is requested by Contractor and agreed to by District. Any such agreement shall be formalized by a Change Order.
 1. District is not required to accept an earlier (advanced) schedule, i.e., one that shows early completion dates for the Contract Times.
 2. Contractor shall not be entitled to extra compensation in the event agreement is reached on an earlier (advanced) schedule and Contractor completes its Work, for whatever reason (excepting approved changes with added time components) beyond completion date shown in earlier (advanced) schedule but within the Contract Times.
 3. A schedule showing the work completed in less than the Contract Times, which has been accepted by District, shall be considered to have Project Float. The Project Float is the time between the scheduled completion of the work and Contract Substantial Completion. Project Float is a resource available to both District and the Contractor.
- C. Float Ownership: Neither District nor Contractor owns float. The Project owns the float. As such, liability for delay of the Substantial Completion Date rests with the party whose actions, last in time, actually cause delay to the Substantial Completion Date.
 1. For example, if Party A uses some, but not all of the float and Party B later uses remainder of the float as well as additional time beyond the float, Party B shall be liable for the time that represents a delay to the Substantial Completion Date.
 2. Party A would not be responsible for the time since it did not consume the entire float and additional float remained; therefore, the Substantial Completion Date was unaffected.

- D. Progress Schedule shall be the basis for evaluating job progress, payment requests, and time extension requests associated with the changes. Responsibility for developing Contract CPM schedule and monitoring actual progress as compared to Progress Schedule rests with Contractor.
- E. The Owner's review and acceptance of schedules does not waive any contract requirements and does not relieve Contractor of any obligation or responsibility for submitting complete and accurate information. Correct rejected schedules and resubmit corrected schedules to the Owner within seven (7) days of notification by the Owner, at which time a new review period of seven (7) days will begin.
- F. Errors or omissions on schedules do not relieve Contractor from finishing all work within the time limit specified for completion of the contract. If, after a schedule has been accepted by the Owner, either the Contractor or the Owner discovers that any aspect of the schedule has an error or omission, it must be corrected on the next updated schedule.
- G. Use Microsoft Project for Windows or Primavera P6. Such software shall be compatible with Windows operating system. Contractor shall transmit contract schedule files to District on CD-ROM or flash drive at times requested by District.
- H. Transmit each item under form approved by District.
 - 1. Identify Project with District Contract number and name of Contractor and file by date, project, and update number.
 - 2. Provide space for Contractor's approval stamp and District's review stamps.
 - 3. Submittals received from sources other than Contractor will be returned to the Contractor without District's review.

1.4 INITIAL CRITICAL PATH METHOD (CPM) SCHEDULE

- A. Initial CPM Schedule submitted for review at the pre-construction conference shall serve as Contractor's schedule for up to ninety (90) calendar days after the Notice to Proceed.
- B. Indicate detailed plan for the Work to be completed in first sixty (60) days of the Contract; details of planned mobilization of plant and equipment; sequence of early operations; and procurement of materials and equipment. Show Work beyond sixty (60) calendar days in summary form.
- C. Initial CPM Schedule shall be time-scaled.
- D. Initial CPM Schedule shall be cost and manpower loaded. Accepted cost and manpower-loaded schedule will be used as basis for monthly progress payments until acceptance of the Original CPM Schedule. Use of Initial CPM Schedule for progress payments shall not exceed sixty (60) calendar days.
- E. District and Contractor shall meet to review and discuss the Initial CPM Schedule within seven (7) calendar days after it has been submitted to District.
 - 1. District's review and comment on the schedule shall be limited to Contract conformance (with sequencing, coordination, and milestone requirements) and accepted CPM principals.
 - 2. Contractor shall make corrections to schedule necessary to comply with Contract requirements and shall adjust schedule to incorporate any missing information requested by District. Contractor shall resubmit Initial CPM Schedule if requested by District.
- F. If, during the first sixty (60) days after Notice-to-Proceed, the Contractor is of the opinion that any of the Work included on its Initial CPM Schedule has been impacted, the Contractor shall submit to District a written Time Impact Evaluation (TIE) in accordance with Article 1.09 of this Section. The TIE shall be based on the most current update of the Initial CPM Schedule.

1.5 ORIGINAL CRITICAL PATH METHOD (CPM) SCHEDULE

- A. Submit a detailed proposed Original CPM Schedule presenting an orderly and realistic plan for completion of the Work, in conformance with requirements as specified herein.
- B. The baseline schedule must not extend beyond the number of contract days. The baseline schedule must have a data date of the first working day of the contract and not include any completed work to date. The baseline schedule must not attribute negative float or negative lag to any activity.
- C. Progress Schedule shall include or comply with following requirements:
1. Time scaled, cost and manpower loaded CPM schedule.
 2. No activity on schedule shall have duration longer than twenty-one (21) calendar days, with exception of submittal, approval, fabrication and procurement activities, unless otherwise approved by District.
 - a. Activity durations shall be total number of actual days required to perform that activity.
 - b. Activity coding capabilities to sort by responsibility, location, phase and CSI division.
 3. The start and completion dates of all items of Work, their major components, and milestone completion dates, if any.
 4. District-furnished materials and equipment, if any, identified as separate activities.
 5. Completion of the last activity in the schedule shall be constrained by the contract completion date. Schedule calculations shall result in a negative float when the calculated early finish date of the last activity is later than the contract completion date. The Contractor shall include as the last activity in the project schedule an activity called "Final Completion". The "Final Completion" activity shall have an "LF" constraint date equal to the contract completion date for the project, and with a zero day duration or by using the "project must finish by" date in the scheduling software. The schedule shall have no constrained dates other than those specified in the contract. The use of artificial float constraints such as "zero free float" or "zero total float" are typically prohibited. There shall only be two (2) open ended activities: Start Project (or NTP) with no predecessor logic and Final Completion with no successor logic.
 6. Processing/approval of submittals and shop drawings for all Contract-required material and equipment. Activities that are dependent on submittal acceptance or material delivery shall not be scheduled to start earlier than expected acceptance or delivery dates.
 - a. Include time for submittals, resubmittals, and reviews by District. Coordinate with accepted schedule for submission of shop drawings, samples and other submittals.
 - b. Contractor shall be responsible for all impacts resulting from resubmittal of shop drawings and submittals.
 7. Procurement of all contract required material and equipment, identified as separate activity.
 - a. Include time for fabrication and delivery of manufactured products for the Work.
 - b. Show dependencies between procurement and construction.
 8. Complete activity description; what Work is to be accomplished and where.
 9. The total cost of performing each activity shall be total of labor, material, equipment, excluding overhead and profit of Contractor. Total overhead and profit of the General Contractor shall be shown on a separate activity in the schedule. Sum of cost for all activities shall equal total Contract value.
 10. Resources required (labor) to perform each activity.
 11. Responsibility code for each activity corresponding to Contractor or Subcontractor responsible for performing the Work.
 12. Identify the activities, which constitute the controlling operations or critical path. No more than twenty-five (25%) of the activities shall be critical or near critical. Near critical is defined as float in the range of one (1) to ten (10) days.
 13. At least twenty-eight (28) calendar days for developing punch list(s), completion of punch list items and final clean-up for the Work or any designated portion thereof. No other activities shall be scheduled during this period.

14. Interface with the work of other contractors, District, and agencies such as, but not limited to, utility companies.
 15. Show detailed Subcontractor Work activities. In addition, furnish copies of Subcontractor schedules upon which CPM was built.
 - a. Also furnish for each Subcontractor, as determined by District, submitted on Subcontractor letterhead a statement certifying that Subcontractor concurs with Contractor's Original CPM Schedule and that Subcontractor's related schedules have been incorporated, including activity duration, cost and resource loading.
 - b. Subcontractor schedules shall be independently derived and not a copy of Contractor's schedule.
 - c. In addition to Contractor's schedule and resource loading, obtain from electrical, mechanical and plumbing Subcontractors, and other Subcontractors as required by District, productivity calculations common to their trades, such as units per person day, feet of pipe per day per person, feet of wiring per day per person, and similar information.
 - d. Furnish schedule for Contractor/Subcontractor CPM Schedule meetings which shall be held prior to submission of Original CPM Schedule to District. District shall be permitted to attend scheduled meetings as an observer.
 16. Activity durations shall be in calendar days.
 17. Submit with the schedule a list of anticipated non-Work days, such as weekends and holidays.
- D. Original CPM Schedule Review Meeting: Contractor shall, within thirty (30) calendar days from the Notice to Proceed date, meet with District to review the Original CPM Schedule submittal.
1. Contractor shall have its Construction Manager, Project Superintendent, Project Scheduler, and key Subcontractor representatives, as required by District, in attendance. The meeting will take place over a continuous one-day period.
 2. District's review will be limited to submittal's conformance to Contract requirements, including, but not limited to, coordination requirements. However, review may also include:
 - a. Accepted critical path method principles and tenets.
 - b. Clarifications of Contract Requirements.
 - c. Directions to include activities and information missing from submittal.
 - d. Requests to Contractor to clarify its schedule.
 3. Within five (5) days of the Schedule Review Meeting, Contractor shall respond in writing to all questions and comments expressed by District at the Meeting.

1.6 ADJUSTMENTS TO CRITICAL PATH METHOD (CPM) SCHEDULE

- A. Adjustments to Original CPM Schedule: Contractor shall have adjusted the Original CPM Schedule submittal to address all review comments from original CPM Schedule review meeting and resubmit network diagrams and reports for District's review.
1. District, within fourteen (14) days from date that Contractor submitted the revised schedule, will either:
 - a. accept schedule and cost and resource loaded activities as submitted, or
 - b. advise Contractor in writing to review any part or parts of schedule which either do not meet Contract requirements or are unsatisfactory for District to monitor Project's progress, resources and status or evaluate monthly payment request by Contractor.
 2. District may accept schedule with conditions that the first monthly CPM schedule update be revised to correct deficiencies identified.
 3. When schedule is accepted, it shall be considered as the "Original CPM Schedule" which will then be immediately updated to reflect the current status of the work.
 4. District reserves the right to require Contractor to adjust, add to, or clarify any portion of schedule which may later be discovered to be insufficient for monitoring of Work or approval of partial payment requests. No additional compensation will be provided for such adjustments, additions, or clarifications.

- B. Acceptance of Contractor's schedule by District will be based upon schedule's compliance with Contract requirements and accepted CPM principles.
 - 1. By way of Contractor assigning activity durations and proposing sequence of Work, Contractor agrees to utilize sufficient and necessary management and other resources to perform work in accordance with the schedule.
 - 2. Upon submittal of schedule update, updated schedule shall be considered "current" CPM schedule.
 - 3. Submission of Contractor's schedule to District shall not relieve Contractor of total responsibility for scheduling, sequencing, and pursuing Work to comply with requirements of Contract Documents, including adverse effects such as delays resulting from ill-timed work.
- C. Submittal of Original CPM Schedule, and subsequent schedule updates, shall be understood to be Contractor's representation that the Schedule meets requirements of Contract Documents and that Work shall be executed in sequence indicated on the schedule.
- D. Contractor shall distribute Original CPM Schedule to Subcontractors for review and written acceptance, which shall be noted on Subcontractors' letterhead to Contractor and transmitted to District for the record.

1.7 MONTHLY CPM SCHEDULE UPDATE SUBMITTALS

- A. Following acceptance of Contractor's Original CPM Schedule, Contractor shall monitor progress of Work and adjust schedule each month to reflect actual progress and any pre-approved changes to planned activities or logic.
 - 1. Each schedule update submitted shall be complete, including all information requested for the Original CPM Schedule submittal.
 - 2. Each update shall continue to show all work activities including those already completed. These completed activities shall accurately reflect "as built" information by indicating when activities were actually started and completed.
- B. A meeting will be held on approximately the twenty-fifth (25th) of each month to review the schedule update submittal and progress payment application.
 - 1. At this meeting, at a minimum, the following items will be reviewed: Percent complete of each activity; time impact evaluations for Change Orders and Time Extension Request; anticipated activity sequence changes; anticipated duration changes; actual and anticipated contractor delays.
 - 2. These meetings are considered a critical component of overall monthly schedule update submittal and Contractor shall have appropriate personnel attend. At a minimum, these meetings shall be attended by Contractor's General Superintendent and Scheduler.
 - 3. Contractor shall plan on the meeting taking no less than four (4) hours.
- C. Within seven (7) calendar days after monthly schedule update meeting, Contractor shall submit the updated CPM Schedule update.
- D. Within seven (7) calendar days of receipt of above noted revised submittals, District will either accept or reject monthly schedule update submittal.
 - 1. If accepted, percent complete shown in monthly update will be basis for Application for Payment by the Contractor. The schedule update shall be submitted as part of the Contractor's Application for Payment.
 - 2. If rejected, update shall be corrected and resubmitted by Contractor before the Application for Payment is submitted.
- E. Updating, changing or revising of any report, curve, schedule or narrative submitted to District by Contractor under this Contract, nor District's review or acceptance of any such report, curve, schedule or narrative shall not have the effect of amending or modifying, in any way, the Contract Substantial Completion date or milestone dates or of modifying or limiting, in any way, Contractor's obligations under this Contract.

- F. Final Updated Schedule. Submit final updated, as-built schedule with actual start and finish dates for the activities, within 30 days after completion of contract work. Provide a written certificate with this submittal signed by your Project Manager or an officer of the company stating, "To my knowledge and belief, the enclosed final update schedule reflects that actual start date and finish dates of the actual activities for the project contained herein". An officer of the company may delegate in writing the authority to sign the certificate to a responsible manager.

1.8 SCHEDULE REVISIONS

- A. Updating the Schedule to reflect actual progress shall not be considered revisions to the Schedule. Since scheduling is a dynamic process, revisions to activity durations and sequences are expected on a monthly basis.
- B. To reflect revisions to the schedule, the Contractor shall provide District with a written narrative with a full description and reasons for each Work activity revised. For revisions affecting the sequence of work, the Contractor shall provide a schedule diagram which compares the original sequence to the revised sequence of work. The Contractor shall provide the written narrative and schedule diagram for revisions two (2) working days in advance of the monthly schedule update meeting.
- C. Schedule revisions shall not be incorporated into any schedule update until the revisions have been reviewed by District. District may request further information and justification for schedule revisions and Contractor shall, within three (3) days, provide District with a complete written narrative response to District's request.
- D. If the Contractor's revision is still not accepted by District, and the Contractor disagrees with District's position, the Contractor has seven (7) calendar days from receipt of District's letter rejecting the revision, to provide a written narrative providing full justification and explanation for the revision. The Contractor's failure to respond in writing within seven (7) calendar days of District's written rejection of a schedule revision shall be contractually interpreted as acceptance of District's position, and the Contractor waives its rights to subsequently dispute or file a claim regarding District's position.
- E. At District's discretion, the Contractor can be required to provide subcontractor certifications of performance regarding proposed schedule revisions affecting said subcontractors.

1.9 RECOVERY SCHEDULE

- A. If the Schedule Update shows a substantial completion date fourteen (14) calendar days beyond the Contract Substantial Completion date, or individual milestone completion dates, the Contractor shall submit to District the proposed revisions to recover the lost time within seven (7) calendar days. As part of this submittal, the Contractor shall provide a written narrative for each revision made to recapture the lost time. If the revisions include sequence changes, the Contractor shall provide a schedule diagram comparing the original sequence to the revised sequence of work.
- B. The revisions shall not be incorporated into any schedule update until the revisions have been reviewed by District.
- C. If the Contractor's revisions are not accepted by District, District and the Contractor shall follow the procedures in paragraph 1.08.C, 1.08.D and 1.08.E above.
- D. At District's discretion, the Contractor can be required to provide subcontractor certifications for revisions affecting said subcontractors.

1.10 TIME IMPACTS EVALUATION (TIE) FOR CHANGE ORDERS, AND OTHER DELAYS

- A. Time Impact Analysis (TIA). Submit a written TIA to the Owner with each request for adjustment of contract time, or when the Contractor or the Owner considers that an approved or anticipated change may impact the critical path or contract progress.

- B. The TIA must illustrate the impacts of each change or delay on the current scheduled completion date or internal milestone, as appropriate. The analysis must use the accepted schedule that has a data date closest to and before the event. If the Owner determines that the accepted schedule used does not appropriately represent the conditions before the event, the accepted schedule must be updated to the day before the event being analyzed. The TIA must include an impact schedule developed from incorporating the event into the accepted schedule by adding or deleting activities, or by changing durations or logic of existing activities. If the impact schedule shows that incorporating the event modifies the critical path and scheduled completion date of the accepted schedule, the difference between scheduled completion dates of the two schedules must be equal to the adjustment of contract time. The Owner may construct and use an appropriate project schedule or other recognized method to determine adjustments in contract time until the Contractor provide the TIA.
- C. Contractor shall be required to comply with the requirements of Paragraph 1.09.A for all types of delays such as, but not limited to, Contractor/Subcontractor delays, adverse weather delays, strikes, procurement delays, fabrication delays, etc.
- D. Contractor shall be responsible for all costs associated with the preparation of Time Impact Analysis, and the process of incorporating them into the current schedule update. The Contractor shall provide District with 4 copies of each TIA.
- E. Once agreement has been reached on a TIA, the Contract Times will be adjusted accordingly. If agreement is not reached on a TIA, the Contract Times may be extended in an amount District allows, and the Contractor may submit a claim for additional time claimed by Contractor.

1.11 TIME EXTENSIONS

- A. The Contractor is responsible for requesting time extensions for time impacts that, in the opinion of the Contractor, impact the critical path of the current schedule update. Notice of time impacts shall be given in accord with Articles 1.12 and 1.15 of Contract Document General Conditions.
- B. Where an event for which District is responsible impacts the projected Substantial Completion date, the Contractor shall provide a written mitigation plan, including a schedule diagram, which explains how (e.g., increase crew size, overtime, etc.) the impact can be mitigated. The Contractor shall also include a detailed cost breakdown of the labor; equipment and material the Contractor would expend to mitigate District caused time impact. The Contractor shall submit its mitigation plan to District within fourteen (14) calendar days from the date of discovery of said impact. The Contractor is responsible for the cost to prepare the mitigation plan.
- C. Failure to request time, provides TIA, or provides the required mitigation plan will result in Contractor waiving its right to a time extension and cost to mitigate the delay.
- D. No time will be granted under this Contract for cumulative effect of changes.
- E. District will not be obligated to consider any time extension request unless requirements of Contract Documents are complied with.
- F. Failure of the Contractor to perform in accordance with the current schedule update shall not be excused by submittal of time extension requests.
- G. If the Contractor does not submit a TIA within the required fourteen (14) calendar days for any issue, it is mutually agreed that the Contractor does not require a time extension for said issue.

1.12 SCHEDULE REPORTS

- A. Submit four (4) copies of the following reports with the Initial CPM Schedule, the Original CPM Schedule, and each monthly update.

B. Required Reports:

1. Two (2) activity-listing reports: one sorted by activity number and one by total float. These reports shall also include each activity's early/late and actual start and finish dates, original and remaining duration, float, responsibility code and the logic relationship of activities.
2. Cost report sorted by activity number including each activity's associated cost, percentage of Work accomplished, earned value to-date, previous payments and amount earned for current update period.
3. Schedule plots presenting time scaled network diagram showing activities and their relationships with the controlling operations or critical path clearly highlighted.
4. Cash flow report calculated by early start, late start and indicating actual progress. Provide an exhibit depicting this information in graphic form.

- C. Furnish District with report files in CD ROM and containing all Microsoft Project .mpp or Primavera .xer schedule files along with report files.

1.13 PROJECT STATUS REPORTING

- A. In addition to submittal requirements for CPM scheduling identified in this Section, Contractor shall provide a monthly project status report (i.e., written narrative report) to be submitted in conjunction with each CPM Schedule as specified herein. Status reporting shall be in form specified below.

- B. Contractor shall prepare monthly written narrative reports of status of Project for submission to District. Written status reports shall include:

1. Transmittal letter
2. Work completed during the period, percent complete of activities
3. Identification of unusual conditions or restrictions regarding labor, equipment or material: including multiple shifts, 6-day work weeks, specified overtime or work at times other than regular days or hours
4. Description of the current critical path
5. Changes to the critical path and scheduled completion date since the last schedule submittal
6. Description of problem areas
7. Current and anticipated delays:
 - a. Cause of delay
 - b. Impact of delay on other activities, milestones and completion dates
 - c. Corrective action and schedule adjustments to correct the delay
8. Contractor may include any other information pertinent to status of Project. Contractor shall include additional status information requested by District at no additional cost.
9. Status reports, and the information contained therein, shall not be construed by the
10. Contractor as claims, notice of claims, notice of delay, or requests for changes or compensation.

1.14 WEEKLY SCHEDULE REPORT

- A. At the Weekly Progress Meeting, the Contractor shall provide and present a time scaled four (4) week schedule one (1) week behind and three (3) week look ahead schedule that is based and correlated by activity number to the current schedule (i.e., Initial, Original CPM, or Schedule Update).

1.15 DAILY CONSTRUCTION REPORTS

- A. On a daily basis, Contractor shall submit a daily activity report to District for each workday, including weekends and holidays, when worked. Contractor shall develop the daily construction reports on a computer generated database capable of sorting daily Work, manpower and man-hours by Contractor, Subcontractor, area, sub area, and change order work. Upon request of District, furnish computer disk of this database. Obtain District's written approval of daily construction report database format prior to implementation. Include in report:

1. Project name and Project number.
2. Contractor's name and address.
3. Weather, temperature and any unusual site conditions.
4. Brief description and location of the day's scheduled activities and any special problems and accidents, including Work of Subcontractors. Descriptions shall be referenced to CPM scheduled activities.
5. Worker quantities for its own Work force and for Subcontractors of any tier.
6. Equipment, other than hand tools, utilized by Contractor and Subcontractors.

1.16 PERIODIC VERIFIED REPORTS

- A. The Contractor shall complete and submit the Final Verified Report required by DSA. In addition to other conditions precedent to Final Payment, the Contractor's completion and submission of the Final Verified Report is an express condition precedent to the District's obligation to make the Final Payment. In addition to completion and submission of the Final Verified Report, as a material obligation under the Contract Documents, the Contractor shall comply all DSA requests for reports or other data relating to the Work, the status thereof or conformity of the Work to the Contract Documents.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 013233 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for the following:
 - 1. Preconstruction photographs.
 - 2. Concealed Work photographs.
 - 3. Periodic construction photographs.
 - 4. Final Completion construction photographs.

- B. Related Requirements:
 - 1. Section 017700 "Closeout Procedures" for submitting photographic documentation as Project Record Documents at Project closeout.
 - 2. Section 024100 "General Demolition Procedures" for photographic documentation before building demolition operations commence.

1.2 INFORMATIONAL SUBMITTALS

- A. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph and video recording. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.

- B. Digital Photographs: Submit image files within three days of taking photographs.
 - 1. Submit photos on CD-ROM or thumb-drive. Include copy of key plan indicating each photograph's location and direction.
 - 2. Identification: Provide the following information with each image description in file metadata tag:
 - a. Name of Project.
 - b. Name and contact information for photographer.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Date photograph was taken.
 - f. Description of location, vantage point, and direction.
 - g. Unique sequential identifier keyed to accompanying key plan.

- C. Video Recordings: Submit video recordings within seven days of recording.
 - 1. Submit video recordings on CD-ROM or thumb drive. Include copy of key plan indicating each video's location and direction.
 - 2. Identification: With each submittal, provide the following information in file metadata tag:
 - a. Name of Project.
 - b. Name and contact information for photographer.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Date video recording was recorded.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - 3. Transcript: Prepared on 8-1/2-by-11-inch paper, punched and bound in three-ring binders. Provide label on front and spine. Include a cover sheet with label information. Include name of Project and date of video recording on each page.

1.3 QUALITY ASSURANCE

- A. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.

1.4 FORMATS AND MEDIA

- A. General: Provide either photographs or video recordings, or a combination of both, to document conditions prior to and during demolition, construction, and closout as indicated.
- B. Digital Photographs: Provide color images in JPG format, produced by a digital camera with minimum sensor size of 12 megapixels, and at an image resolution of not less than 3200 by 2400 pixels, and with vibration-reduction technology. Use flash in low light levels or backlit conditions.
- C. Digital Images: Submit digital media as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.
- D. File Names: Name media files with Project area and sequential numbering suffix.

1.5 CONSTRUCTION PHOTOGRAPHS

- A. General: Take photographs with maximum depth of field and in focus.
 - 1. Maintain key plan with each set of construction photographs that identifies each photographic location.
- B. Preconstruction Photographs: Before commencement of the Work, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Architect.
 - 1. Flag excavation areas before taking construction photographs.
 - 2. Take 20 photographs to show existing conditions adjacent to property before starting the Work.
 - 3. Take 20 photographs of existing buildings either on or adjoining property, to accurately record physical conditions at start of construction.
 - 4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.
- C. Concealed Work Photographs: Before proceeding with installing work that will conceal other work, take photographs sufficient in number, with annotated descriptions, to record nature and location of concealed Work, including, but not limited to, the following:
 - 1. Underground utilities.
 - 2. Underslab services.
 - 3. Piping.
 - 4. Electrical conduit.
 - 5. Waterproofing and weather-resistant barriers.
- D. Periodic Construction Photographs: Take 20 photographs monthly coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken.
- E. Final Completion Construction Photographs: Take 20 photographs after date of Substantial Completion for submission as Project Record Documents. Architect will inform photographer of desired vantage points.
- F. Additional Photographs: Architect may request photographs in addition to periodic photographs specified. Additional photographs will be paid for by Change Order and are not included in the Contract Sum.
 - 1. Three days' notice will be given, where feasible.
 - 2. In emergency situations, take additional photographs within 24 hours of request.

3. Circumstances that could require additional photographs include, but are not limited to, the following:
 - a. Special events planned at Project site.
 - b. Immediate follow-up when on-site events result in construction damage or losses.
 - c. Photographs shall be taken at fabrication locations away from Project site. These photographs are not subject to unit prices or unit-cost allowances.
 - d. Substantial Completion of a major phase or component of the Work.
 - e. Extra record photographs at time of final acceptance.
 - f. Owner's request for special publicity photographs.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 013300 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals including:
 - 1. Procedures
 - 2. Schedule of Shop Drawing and Sample Submittals
 - 3. Safety Plan
 - 4. Progress Schedule
 - 5. Product Data
 - 6. Shop Drawings
 - 7. Samples
 - 8. Quality Control Submittals
 - 9. Design Data
 - 10. Test Reports
 - 11. Certificates
 - 12. Manufacturers' Instructions
 - 13. Machine Inventory Sheets Operations and Maintenance Manuals Computer Programs
 - 14. Project Record Documents
 - 15. LEED Submittals

1.2 RELATED SECTIONS

- A. Section 011100: Summary of Work.
- B. Section 012600: Contract Modification Procedures.
- C. Section 013200: "Progress Schedules and Reports" for submitting schedules and reports, including Contractor's Construction Schedule and the Submittals Schedule.
- D. Section 017000: Contract Closeout
- E. Section 017800: Project Record Documents.

1.3 DEFINITIONS

- A. Action Submittals: Written and graphic information that requires Architect's responsive action.
- B. Informational Submittals: Written information that does not require Architect's responsive action. Submittals may be rejected for not complying with requirements.

1.4 SUBMITTAL PROCEDURES

- A. General: Electronic copies of CAD Drawings of the Contract Drawings are always through Architect for Contractor's use in preparing submittals. Files are used as background use only.
- B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
 - 1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 - 2. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

- a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
- C. **Submittals Schedule:** Comply with requirements in Division 1 Section "Construction Progress Documentation" for list of submittals and time requirements for scheduled performance of related construction activities.
- D. **Processing Time:** Allow enough time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Construction Manager's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
1. **Initial Review:** Allow 15 work days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Construction Manager will advise Contractor when a submittal being processed must be delayed for coordination.
 2. **When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.**
 3. **Resubmittal Review:** Allow 10 business days for review of each resubmittal.
 4. **Sequential Review:** Where sequential review of submittals by Architect's consultants, District, or other parties is indicated, allow 21 days for initial review of each submittal.
- E. Submit at own expense, a minimum of two (2) printed sets or copies and one (1) electronic PDF set- Schedule of Shop Drawing and Sample Submittals, Safety Plans, Progress Schedule, Product Data, Shop Drawings, Samples, Quality Control Data, Machine Inventory Sheets, Operations and Maintenance Manuals, Computer Programs, and Project Record Documents required by the Contract Documents.
- F. Transmit each item with a standard letter of transmittal in form approved by Construction Manager.
- G. Identify project, Contractor, subcontractor, major supplier, pertinent drawing sheet and detail number, and specification section number as appropriate. Provide space for Contractor, Construction Manager and Architect/Engineer review stamps.
- H. Where manufacturer's standard drawings or data sheets are used, they shall be marked clearly to show those portions of the data, which are applicable to this project.
- I. Submit Shop Drawings, Samples and other submittals to Construction Manager for review and approval by Architect/Engineer in accordance with accepted schedule of Shop Drawings and Samples submittals. If no such schedule is agreed upon, then all Shop Drawing, Samples and product data submittals shall be completed within ninety (90) days after receipt of Notice to Proceed from District.
- J. The data shown on the Shop Drawings shall be complete with respect to quantities, dimensions, specified performance and design criteria, materials and similar data to show Architect/Engineer the materials and equipment Contractor proposes to provide and to enable Architect/Engineer to review the information for the limited purposes specified below. Samples shall be identified clearly as to material, supplier, pertinent data such as catalog numbers and the use for which it is intended and otherwise as Architect/Engineer may require enabling Architect/Engineer to review the submittal. The number of each Sample to be submitted will be as specified in the Specifications.
- K. At the time of each submission, Contractor shall give Construction Manager, Architect/Engineer, and Inspector specific written notice of all variations, if any; that the Shop Drawing or Sample submitted may have from the requirements of the Contract Documents, and the reasons therefore. This written notice shall be in a written communication separate from the submittal. In addition, Contractor shall cause a specific notation to be made on each Shop Drawing and Sample submitted to Construction Manager for review and approval of each such variation by Architect/Engineer. The Architect/Engineer may make adjustments to submittals that may result in changes to the contract. The appropriate change order request should be prepared by the Contractor within ten (10) days of receipt of submittals.

- L. If District accepts deviation, District shall issue appropriate Contract Modification.
- M. Submittal coordination and verification is responsibility of Contractor; this responsibility shall not be delegated in whole or in part to subcontractors or suppliers. Before submitting each Shop Drawing or Sample, Contractor shall have determined and verified:
 - 1. All field measurements, quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers and similar information with respect thereto;
 - 2. All materials with respect to intended use, fabrication, shipping, handling, storage, assembly and installation pertaining to the performance of the Work; and
 - 3. All information relative to Contractor's sole responsibilities and of means, methods, techniques, sequences and procedures of construction and safety precautions and programs incident thereto.
- N. Contractor shall also have reviewed and coordinated each Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents.
- O. Contractor's submission to Construction Manager of a Shop Drawing or Sample submittal will constitute Contractor's representation that it has satisfied its obligations under the Contract Documents, and as set forth immediately above, with respect to Contractor's review and approval of that submittal.
- P. Designation of work "by others", if shown in submittals, shall mean that work will be responsibility of Contractor rather than subcontractor or supplier who has prepared submittals.
- Q. After review by Architect/Engineer of each of Contractor's submittals, one electronic set will be returned to Contractor with actions defined as indicated below.
- R. The Final Review Code on the Submittal Review Sheet prevails and governs the action of the overall submittal.
- S. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect and Construction Manager.
- T. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned without review.
- U. Architect and Construction Manager will return without review or will discard submittals received from sources other than the Contractor.
- V. Submittals not required by the Contract Documents may be returned by the Architect without action.
- W. It is considered reasonable that Contractor shall make a complete and acceptable submittal at least by second submission.
 - 1. District reserves the right to deduct monies from payments due Contractor to cover additional costs of Architect's/Engineer's review beyond the second submission. Illegible submittals will be rejected and returned to Contractor for resubmission.

- X. Favorable review will not constitute acceptance by District or Architect/Engineer of any responsibility for the accuracy, coordination and completeness of the submittals. Accuracy, coordination, and completeness of Submittals shall be sole responsibility of Contractor, including responsibility to back check comments, corrections, and modifications from District's or Architect's/Engineer's review before fabrications. Submittals may be prepared by Contractor, subcontractors, or suppliers, but Contractor shall ascertain that submittals meet requirements of Contract Documents, while conforming to structural space and access conditions at point of installation. Architect/Engineer's review will be only to determine if the items covered by the submittals will, after installation or incorporation in the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Favorable review of submittal, method of work, or information regarding materials and equipment Contractor proposes to furnish shall not relieve Contractor of responsibility for errors therein and shall not be regarded as assumption of risks or liability by Architect/Engineer or District, or any officer or employee thereof, and Contractor shall have no claim under Contract on account of failure or partial failure or inefficiency or insufficiency of any plan or method of work or material and equipment so accepted. Favorable review shall be considered to mean merely that Architect/Engineer or District has no objection to Contractor using, upon his own full responsibility, plan or method of work proposed, or furnishing materials and equipment proposed.
- Y. Architect's/Engineer's review will not extend the means, methods, techniques, sequences or procedures of construction or to safety precautions or programs incident thereto. The review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.
- Z. Submit complete initial submittal for those items where required by individual specification Sections. Complete submittal shall contain sufficient data to demonstrate that items comply with Specifications, shall meet minimum requirements for submissions cited in technical specifications, shall include motor data and seismic anchorage certifications, where required, and shall include necessary revisions required for equipment other than first named. If Contractor submits incomplete initial submittal, when complete submittal is required, submittal may be returned to Contractor without review.
- AA. It shall be Contractor's responsibility to copy, conform and distribute reviewed submittals in sufficient numbers for Contractor's files, subcontractors and vendors.
- BB. After Architect/Engineer review of submittal, revise and resubmit as required. Identify changes made since previous submittal.
 - 1. Begin no fabrication or work, which require submittals until return of submittals not requiring resubmittal.
 - 2. Normally, submittals will be processed and returned to Construction Manager within fifteen (15) working days of receipt by Architect. The processing time spent to review submittals by Construction Manager shall be in addition to the fifteen (15) days.
 - 3. Distribute copies of reviewed submittals to concerned persons. Instruct recipients to promptly report any inability to comply with provisions.

1.5 SCHEDULE OF SHOP DRAWING, DSA DEFERRED APPROVAL SUBMITTALS AND SAMPLE SUBMITTALS

- A. Submit preliminary Schedule of Shop Drawing and Sample Submittals as required by General Conditions. Submit two (2) copies and one (1) electronic PDF of final and accepted schedule of submittals of shop drawings and samples as required by General Conditions, and in no event later than thirty (30) days following Notice of Award.
- B. Schedule of Shop Drawing and Sample Submittals will be used by Architect/Engineer to schedule their activities relating to review of submittals. Schedule of submittals shall indicate a spreading out of submittals and early submittals of long lead-time items and of items, which require extensive review.
- C. Schedule of Shop Drawing and Sample Submittals shall be reviewed by Construction Manager and shall be revised and resubmitted until accepted by Construction Manager.

- D. DSA Deferred Approval Submittals shall be prepared for review by the Architect/Engineer within 30 days of receipt of Notice to Proceed. Contractor shall promptly make corrections to documents for Architect to submit to DSA for approval. Contractor shall have the sole responsibility for obtaining DSA approval via the Architect's office for all deferred approval submittals in a timely manner. There will be no time extensions granted for delay in obtaining such approval.

1.6 SAFETY PLAN

- A. Submit one (1) copies and one (1) electronic PDF of Safety Plan specific to this Contract to Construction Manager within fifteen (15) calendar days after Start Date of the Contract Time.
- B. No on-site work shall be started until Safety Plan has been reviewed and accepted by District. Acceptance of Safety Plan shall not affect Contractor's responsibility for maintaining a safe working place and instituting safety programs in connection with project in full compliance with local, state and federal regulations.

1.7 PROGRESS SCHEDULE

- A. Schedule all items requiring Architect action for submission during first 25 percent of construction period.
- B. See Section 013200 "Progress Schedules and Reports" for schedule and report requirements.
- C. Submit (3) print copies, one (1) electronic report file in PDF format, and either Microsoft Project .mpp or Primavera .xer schedule program files:
 - 1. Initial CPM Schedule at the Pre-construction Conference.
 - 2. Original CPM Schedule within thirty (30) days of Notice to Proceed (NTP).
 - 3. Adjustments to the CPM Schedule as required.
 - 4. CPM Schedule updates monthly, five (5) days prior to monthly progress meeting.
- D. Submit three (3) copies and one (1) electronic PDF copy of the reports listed in Section 013200 "Progress Schedules and Reports" with:
 - 1. Initial CPM Schedule
 - 2. Original CPM Schedule
 - 3. Each monthly Schedule update
 - 4. Each weekly three (3) week look ahead Schedule
- E. Progress Schedules and Reports shall be submitted electronically, in addition to hard copies as specified above.

1.8 QUALITY CONTROL SUBMITTALS

- A. Design Data: Not applicable.
- B. Test Reports: Three (3) copies minimum. One (1) copy will be marked with Architect's/Engineer's review comments and returned to Contractor.
 - 1. Indicate that material or product conforms to or exceeds specified requirements.
 - 2. Reports may be from recent or previous tests on material or product, but must be acceptable to Construction Manager. Comply with requirements of each individual specification Section.
- C. Certificates: Three (3) copies minimum. One (1) copy will be marked with Architect's/Engineer's review comments and returned to Contractor.
 - 1. Indicate that material or product conforms to or exceeds specified requirements.
 - 2. Submit supporting reference data, affidavits, and certifications as appropriate.
 - 3. Certificates may be recent or from previous test results on material or product, but must be acceptable to Construction Manager.

- D. Manufacturers' Instructions: Three (3) copies minimum. One (1) copy will be marked with Architect's/Engineer's review comments and returned to Contractor.
1. Include manufacturer's printed instructions for delivery, storage, assembly, installation, startup, adjusting, and finishing.
 2. Identify conflicts between manufacturer's instructions and Contract Documents.

1.9 COMPUTER PROGRAMS

- A. When any equipment requires operation by computer programs, submit copy of program on CD(s) plus all user manuals and guides for operating the programs and making changes in the programs for upgrading and expanding the databases. Provide required licenses to District at no additional cost.
1. Include at least three (3) years prepaid software license renewals, which includes software upgrades and updates.

1.10 PROJECT RECORD DOCUMENTS

- A. Submit one copy of each of the Project Record Documents listed in Section 017800 - Project Record Documents.

1.11 DELAY OF SUBMITTALS

- A. Delay of submittals by Contractor is considered avoidable delay. Liquidated damages incurred because of late submittals will be assessed to the Contractor.

PART 2 - PRODUCTS

2.1 SUBMITTALS

- A. Within fifteen (15) calendar days after Start Date of the Contract Time submit two (2) copies and one (1) electronic PDF of complete list of substitutions of major products proposed for use, with name of manufacturer, trade name, and model number of each product.
- B. Contractor shall be responsible for and make all submissions.
1. Submit items specified herein to Architect and Construction Manager.
 2. Submit all submittals through the Construction Manager's Electronic Submittal Program.
 3. Identify each transmittal using the 6-digit specification number, i.e., metal handrails might be numbered 05 5000, along with an individual submittal number for each section number. Submittal numbers shall be sequential. If returning submittal "12" for re-submission, second submission would be identified as "12A". Should submittal be rejected multiple times (12b, 12c, etc), the Contractor may be required to reimburse the District/Architect for labor to review subsequent submissions.
 4. Develop, for maintenance by the Construction Manager, a schedule of all submittals and their status. Refer to Paragraph 1.3 below. The schedule will be reviewed each week at the project meeting.
- C. Transmittals, shop drawings, or samples submitted to Architect shall have the Contractor's stamp on it with his signature and be marked "approved." Contractor's stamp on these items indicates that Contractor has performed the following:
1. Verified field dimensions and quantities.
 2. Verified field construction criteria, materials, catalog numbers and similar data.
 3. Reviewed and coordinated submittal data with requirements of the Work and the Contract Documents.
 4. ITEMS NOT STAMPED BY THE CONTRACTOR WILL BE RETURNED UNREVIEWED.

- D. Indicate any item, component, material or portion of Work, which deviates from Contract Documents. Unless such departures are accepted as indicated in paragraph "Review" below, such departures will not be permitted.
- E. Make submittals sufficiently in advance of data required to allow Architect reasonable time for review and additional resubmission and review cycles if necessary.
 - 1. Items submitted without Contractor's review stamp will be returned, without action, for resubmission.
 - 2. Items not submitted in accordance with provisions of this Section will be returned, without action, for resubmission.
 - 3. Submissions on items not approved for use by specifications or addenda will be rejected.
 - 4. Drawings transmitted by other than the Prime Contractor will be returned to the Prime Contractor without action of any kind. Drawings will not be returned to subcontractors.

2.2 SUBMITTALS - PRODUCT DATA

- A. For products specified only by reference standards, give manufacturer, trade name, model or catalog designation, and reference standards.
- B. Tabulate products by specification section number.
- C. Supplemental Data:
 - 1. Submit number of copies, which Contractor requires, plus three (3) copies, which will be retained by Construction Manager.
 - 2. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturer's standard data to provide information unique to Project.
 - 3. Manufacturer's standard details and installation instructions.
- D. Provide copies for Project Record Documents described in Section 017000 - Contract Closeout.

2.3 SUBMITTALS - SHOP DRAWINGS

- A. Identify drawings with manufacturer, item, use, type, project designation, specification section or drawing detail reference.
- B. Minimum Sheet Size: 8-1/2 inches by 11 inches. All others: Multiples of 8-1/2 inches by 11 inches, 34 inches by 44 inches maximum.
- C. For 8-1/2 inch by 11 inch and 11 inch by 17-inch sheets, submit number of copies, which contractor requires plus three (3) copies, which will be retained by Construction Manager.
- D. For 17 inch by 22 inch through 34 inch by 44-inch sheets, submit one electronic and a minimum of three prints. After review, reproduce and distribute.
- E. Original sheet or reproducible transparency will be marked with Architect's/Engineer's review comments and returned to Contractor.
- F. Each sheet/copy must include project name and project number and bid number on all sheets.
- G. Mark each copy to identify applicable Products, models, options, and other data; supplement manufacturers' standard data to provide information unique to Work.
- H. Include manufacturers' installation instructions when required by specification section.
- I. Submit a copy of the Shop Drawing Transmittal Form with each submittal and resubmittal.

2.4 SUBMITTALS - SAMPLES

- A. Identify samples with manufacturer's name, item, use, type, project designation, specification section or drawing detail reference, color, range, texture, finish and other pertinent data.
 - 1. Submit samples to illustrate functional and aesthetic characteristics of Product, with integral parts and attachment devices. Coordinate submittal of different categories for interfacing work.
- B. Submit full range of manufacturers' standard colors, textures, and patterns for Construction Manager's selection.
- C. Submit a minimum of three (3) samples unless otherwise specified in the construction documents.
- D. Sizes: Unless otherwise specified, provide the following:
 - 1. Paint Chips: Manufacturers' standard
 - 2. Flat or Sheet Products: Minimum 6 inches square, maximum 12 inches square
 - 3. Linear Products: Minimum 6 inches, maximum 12 inches long
 - 4. Bulk Products: Minimum 1 pint, maximum 1 gallon
- E. Full size samples may be used in Work upon approval.
- F. Mock-ups:
 - 1. Erect field samples and mock-ups at Project site in accordance with requirements of Specification sections.
 - 2. Modify or make additional field samples and mock-ups as required to provide appearance and finishes approved by Construction Manager.
 - 3. Approved field samples and mock-ups may be used in Work upon approval.
- G. Architect may, at his option, retain samples for comparison purposes until completion of Work.
 - 1. Samples will be returned or may be used in the Work unless the technical section specifically indicates otherwise.
 - 2. Remove samples when directed.
 - 3. Pay all costs of furnishing or constructing, and removing samples.
- H. Resubmit samples of rejected items.
- I. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- J. Delegated-Design Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit three copies of a statement, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
 - 1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

- A. Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect and Construction Manager.
- B. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT REVIEW

- A. General: Architect and Construction Manager will not review submittals that do not bear Contractor's approval stamp and will return them without action.
- B. Action Submittals: Architect and Construction Manager will review each submittal, make marks to indicate corrections or modifications required, and return it. Architect and Construction Manager will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action taken.
- C. Reproduce and distribute submittals that the Architect reviews and stamps as follows, to indicate the action taken:
 - 1. Action Codes Permitting Use:
 - a. Code AP - NO EXCEPTIONS TAKEN: Accepted subject to its compatibility with future submittals and additional partial submittals for portions of the work not covered in this submittal. Does not constitute approval or deletion of specified or required items not shown on the submittal. The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
 - b. Code AN - MAKE CORRECTIONS NOTED (NO RESUBMISSION REQUIRED): The Work covered by the submittal item may proceed, except minor corrections noted shall be made by Contractor, provided the submittal complies with the Architect's notations and Contract Document requirements.
 - c. Code AN-R - REVISE AND RESUBMIT: Rejected because of major inconsistencies or errors which shall be resolved or corrected by Contractor prior to subsequent review by Architect/Engineer. Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.
 - 1) Submit Specified Item: When submittal is marked "Revise and Resubmit," do not proceed with that part of the Work covered by the submittal, including purchasing, fabrication, delivery, or other activity. Revise or prepare a new submittal in accordance with the notations; resubmit without delay. Repeat if necessary to obtain a different action mark.
 - a) Do not permit submittals marked "Revise and Resubmit" to be used at the Project site, or elsewhere where Work is in progress.
 - 2. Action Code Prohibiting Use:
 - a. Action Code REJ - REJECTED (RESUBMIT): Submitted material does not conform to Plans and Specifications in major respect, i.e.: general non-compliance, wrong size, model, capacity, or material. The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
 - a. Action Code X - NO ACTION TAKEN: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.
 - D. Informational Submittals: For Architect's information only. Architect and Construction Manager will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect and Construction Manager will forward each submittal to appropriate party.
 1. Action Code for Information Only:
 - a. Action Code INF - INFORMATION ONLY - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.
 - E. Contractor shall retain 1 copy of each "Reviewed," "Reviewed -- Additional Information Required" or "Furnish as Corrected" submittal on file at the job site.
 - F. Architect shall retain 1 copy of each "Reviewed," "Reviewed -- Additional Information Required" or "Furnish as Corrected" submittal in the project file.
 - G. Contractor shall resubmit items stamped "Revise and Resubmit" or "Rejected" by Architect.
 1. Provide a print of previous drawing with resubmission for comparison.
 2. Add letter suffix to previous transmittal number, to indicate resubmission.
 3. It shall be the Contractor's responsibility to assure that previously approved documents are destroyed when they are superseded by a resubmittal.
 - H. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
 1. Architect's review is for general conformance and does not:
 - a. Permit departure from Contract Documents.
 - b. Relieve Contractor from responsibility for errors in detail, in dimensions or related items.
 - c. Approve departure from previous instructions or details.
 - d. Relieve Contractor of the responsibility to provide all components, wiring, etc., required to make item operable or usable.
 - e. Imply acceptance of items for which no data is submitted.
 - f. Imply that Architect has reviewed all dimensions and quantities. Contractor is responsible for determining accuracy of dimensions and quantities.
 - I. Notify Architect of deviations from the Contract Documents.
 - J. Reviewed samples submitted or constructed and approved by Architect constitute criterion for judging completed work. Finish work or items not equal to samples will be rejected.
 - K. Start of work which requires submittals, prior to return of submittals with Architect or District's stamp indicating review and approval is at Contractor's risk.
- 3.3 DISTRIBUTION**
- A. Contractor shall copy and distribute all "Reviewed," "Reviewed -- Additional Information Required" or "Furnish as Corrected" submittals, including one copy to the District.

END OF SECTION

SECTION 013516 - ALTERATION PROJECT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes special procedures for alteration work.
- B. Related Requirements:
 - 1. Section 024100 "General Demolition Procedures."
 - a. Coordinate work of this section with demolition Section 024100 as required. If conflicts arise, notify Architect in writing. Do not proceed with work until Architect determines best course of action.

1.2 DEFINITIONS

- A. Alteration Work: This term includes demolition, cutting and patching, remodeling, renovation, repair, and maintenance work performed within existing spaces or on existing surfaces as part of the Project.
- B. Consolidate: To strengthen loose or deteriorated materials in place.
- C. Design Reference Sample: A sample that represents the Architect's prebid selection of work to be matched; it may be existing work or work specially produced for the Project.
- D. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.
- E. Match: To blend with adjacent construction and manifest no apparent difference in material type, species, cut, form, detail, color, grain, texture, or finish; as approved by Architect.
- F. Refinish: To remove existing finishes to base material and apply new finish to match original, or as otherwise indicated.
- G. Repair: To correct damage and defects, retaining existing materials, features, and finishes. This includes patching, piecing-in, splicing, consolidating, or otherwise reinforcing or upgrading materials.
- H. Replace: To remove, duplicate, and reinstall entire item with new material. The original item is the pattern for creating duplicates unless otherwise indicated.
- I. Replicate: To reproduce in exact detail, materials, and finish unless otherwise indicated.
- J. Reproduce: To fabricate a new item, accurate in detail to the original, and from either the same or a similar material as the original, unless otherwise indicated.
- K. Retain: To keep an element or detail secure and intact.
- L. Strip: To remove existing finish down to base material unless otherwise indicated.

1.3 COORDINATION

- A. Alteration Work Schedule: A construction schedule coordinating the sequencing and scheduling of alteration work for entire Project, including each activity to be performed, and based on Contractor's Demolition and Construction Schedules. Secure time commitments for performing critical construction activities from separate entities responsible for alteration work.

1. Schedule demolition and construction operations in sequence required to obtain best Work results.
 2. Coordinate Alteration Work Schedule with Demolition Schedules included in section 024100 "General Demolition Procedures."
 3. Coordinate sequence of alteration work activities to accommodate the following:
 - a. District's continuing occupancy of portions of existing and/or adjacent buildings.
 - b. District's partial occupancy of completed Work.
 - c. Other known work in progress.
 - d. Tests and inspections.
 4. Detail sequence of alteration work, with start and end dates.
 5. Utility Services: Indicate how long utility services will be interrupted. Coordinate shutoff, capping, and continuation of utility services.
 6. Use of elevator and stairs.
 7. Equipment Data: List gross loaded weight, axle-load distribution, and wheel-base dimension data for mobile and heavy equipment proposed for use in existing structure. Do not use such equipment without certification from Contractor's professional engineer that the structure can support the imposed loadings without damage.
- B. Pedestrian and Vehicular Circulation: Coordinate alteration work with circulation patterns within Project building(s) and site. Some work is near circulation patterns . Circulation patterns cannot be closed off entirely and in places can be only temporarily redirected around small areas of work. Plan and execute the Work accordingly.

1.4 PROJECT MEETINGS FOR ALTERATION WORK

- A. Preliminary Conference for Alteration Work: Before starting alteration work, conduct conference at Project site.
1. Attendees: In addition to representatives of District, Architect, and Contractor, testing service representative, specialists, and chemical-cleaner manufacturer(s) shall be represented at the meeting.
 2. Agenda: Discuss items of significance that could affect progress of alteration work, including review of the following:
 - a. Alteration Work Schedule: Discuss and finalize; verify availability of materials, specialists' personnel, equipment, and facilities needed to make progress and avoid delays.
 - b. Fire-prevention plan.
 - c. Governing regulations.
 - d. Areas where existing construction is to remain and the required protection.
 - e. Hauling routes.
 - f. Sequence of alteration work operations.
 - g. Storage, protection, and accounting for salvaged and specially fabricated items.
 - h. Existing conditions, staging, and structural loading limitations of areas where materials are stored.
 - i. Demolition requirements indicated in other Sections, including Section 024100 "General Demolition Procedures."
 - j. Qualifications of personnel assigned to alteration work and assigned duties.
 - k. Requirements for extent and quality of work, tolerances, and required clearances.
 - l. Embedded work such as flashings and lintels, special details, collection of waste, protection of occupants and the public, and condition of other construction that affects the Work or will affect the work.
 3. Reporting: Record conference results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from conference.
- B. Coordination Meetings: Conduct coordination meetings specifically for alteration work at weekly intervals. Coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.

1. Attendees: In addition to representatives of District, Architect, and Contractor, each specialist, supplier, installer, and other entity concerned with progress or involved in planning, coordination, or performance of alteration work activities shall be represented at these meetings. All participants at conference shall be familiar with Project and authorized to conclude matters relating to alteration work.
2. Agenda: Review and correct or approve minutes of previous coordination meeting. Review other items of significance that could affect progress of alteration work. Include topics for discussion as appropriate to status of Project.
 - a. Alteration Work Subschedule: Review progress since last coordination meeting. Determine whether each schedule item is on time, ahead of schedule, or behind schedule. Determine how construction behind schedule will be expedited with retention of quality; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities are completed within the Contract Time.
 - b. Schedule Updating: Revise Contractor's Alteration Work Subschedule after each coordination meeting where revisions to schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
 - c. Review present and future needs of each entity present, including review items listed in the "Preliminary Conference for Alteration Work" Paragraph in this article and the following:
 - 1) Interface requirements of alteration work with other Project Work.
 - 2) Status of submittals for alteration work.
 - 3) Access to alteration work locations.
 - 4) Effectiveness of fire-prevention plan.
 - 5) Quality and work standards of alteration work.
 - 6) Change Orders for alteration work.
3. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

1.5 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, alterations waste becomes property of Contractor.
- B. Historic items, relics, and similar objects as occurs, including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, antiques, and other items of interest or value to District that may be encountered or uncovered during the Work, regardless of whether they were previously documented, remain District's property.
 1. Carefully dismantle and salvage each item or object in a manner to prevent damage and protect it from damage, then promptly deliver it to District where directed at Project site.

1.6 INFORMATIONAL SUBMITTALS

- A. Alteration Work Schedule:
 1. Submit alteration work subschedule within 30 days of date established for Notice to Proceed. In addition to alteration work, include the following:
 - a. Implementation and Termination Schedule: Include information indicating implementation and termination dates of each temporary utility.
 - b. Demolition Subschedule: Include high-level general dates and durations for site, selective, and building demolition required by Section 024100 "General Demolition Procedures."
- B. Site Utilization Plan: Show temporary facilities, temporary utility lines and connections, staging areas, construction site entrances, vehicle circulation, and parking areas for construction personnel.
- C. Preconstruction Documentation: Show preexisting conditions of adjoining construction and site improvements that are to remain, including finish surfaces, that might be misconstrued as damage caused by Contractor's alteration work operations.

- D. Project Identification and Temporary Signs: Show fabrication and installation details, including plans, elevations, details, layouts, typestyles, graphic elements, and message content.
- E. Alteration Work Program: Prepare a written plan for alteration work for entire Project, including each phase or process and protection of surrounding materials during demolition, site alterations and development, and construction operations. Show compliance with indicated methods and procedures specified in this and other Sections. Coordinate this whole-Project alteration work program with specific requirements of programs required in other alteration work Sections. Include the following information:
1. Proposed Protection Measures: Submit informational report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and, for noise control during demolition and throughout the remainder of the alteration Work. Indicate proposed locations and construction of barriers.
 - a. Adjacent Buildings: Detail special measures proposed to protect adjacent buildings to remain including means of egress from those buildings.
 2. Debris Hauling: Include plans clearly marked to show debris hauling routes, turning radii, and locations and details of temporary protective barriers.
 3. Moisture- and Mold-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage and mold during demolition and alteration activities. Describe delivery, handling, storage, installation, and protection provisions for materials subject to water absorption or water damage.
 - a. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and requirements for replacing water-damaged Work.
 - b. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
 - c. Indicate methods to be used to avoid trapping water in finished work.
 4. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation during demolition and alteration activities. Include the following:
 - a. Locations of proposed temporary dust- and noise-control partitions and means of egress from occupied areas coordinated with continuing on-site operations and other known work in progress.
 - b. HVAC system isolation schematic drawing.
 - c. Location of proposed air-filtration system discharge.
 - d. Waste-handling procedures.
 - e. Other dust-control measures.
 5. Noise and Vibration Control Plan: Identify construction activities that may impact the occupancy and use of existing spaces within the building or adjacent existing buildings, whether occupied by others, or occupied by the District during demolition and alteration activities. Include the following:
 - a. Methods used to meet the goals and requirements of the District.
 - b. Concrete cutting method(s) to be used.
 - c. Location of construction devices on the site.
 - d. Show compliance with the use and maintenance of quieted construction devices for the duration of the Project.
 - e. Indicate activities that may disturb building occupants and that are planned to be performed during non-standard working hours as coordinated with the District.
 - f. Indicate locations of sensitive equipment areas or other areas requiring special attention as identified by Owner. Indicate means for complying with District's requirements.

6. Fire-Prevention Plan: Within 30 days of date established for Notice to Proceed, unless more stringent is required by AHJ or District, prepare and submit a written plan for preventing fires during the Work, including placement of fire extinguishers, fire blankets, rag buckets, and other fire-control devices during each phase or process. Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Coordinate plan with District's fire-protection equipment and requirements. Include fire-watch personnel's training, duties, and authority to enforce fire safety.
 - a. Indicate Contractor personnel responsible for management of fire-prevention program during demolition and alteration activities.
7. Erosion- and Sedimentation-Control Plan: Show compliance with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent, for work during demolition and subsequent construction activities.

1.7 CLOSEOUT SUBMITTALS

- A. General: Refer to Section 017000 "Contract Closeout."

1.8 QUALITY ASSURANCE

- A. Specialist Qualifications: An experienced firm regularly engaged in specialty work similar in nature, materials, design, and extent to alteration work as specified in each Section and that has completed a minimum of five recent projects with a record of successful in-service performance that demonstrates the firm's qualifications to perform this work.
 1. Field Supervisor Qualifications: Full-time supervisors experienced in specialty work similar in nature, material, design, and extent to that indicated for this Project. Supervisors shall be on-site when specialty work begins and during its progress. Supervisors shall not be changed during Project except for causes beyond the control of the specialist firm.
 - a. Construct new mockups of required work whenever a supervisor is replaced.
- B. Title X Requirement: Each firm conducting activities that disturb painted surfaces shall be a "Lead-Safe Certified Firm" according to 40 CFR 745, Subpart E, and use only workers that are trained in lead-safe work practices.
- C. Safety and Health Standard: Comply with ANSI/ASSP A10.6.
- D. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.
- E. Accessible Temporary Egress: Comply with applicable provisions in the CBC Title 24 Chapter 11B during demolition and alterations work.

1.9 FIELD CONDITIONS

- A. Survey of Existing Conditions: Record existing conditions that affect the Work by use of preconstruction photographs.
 1. Comply with requirements specified in Section 013233 "Photographic Documentation."
- B. Buildings immediately adjacent to demolition and alteration areas may be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.
 1. Provide not less than 72 hours notice of activities that will affect operations of adjacent occupied buildings.
 2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.
 - a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.

- C. Discrepancies: Notify Architect of discrepancies between existing conditions and Drawings before proceeding with removal and dismantling work.
- D. Size Limitations in Existing Spaces: Materials, products, and equipment used for performing the Work and for transporting debris, materials, and products shall be of sizes that clear surfaces within existing spaces, areas, rooms, and openings, including temporary protection, by 12 inches or more.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Refer to individual Specification Sections and Drawings for products, materials, and equipment.

PART 3 - EXECUTION

3.1 PROTECTION

- A. Protect persons, motor vehicles, surrounding surfaces of building, building site, plants, and surrounding buildings from harm resulting from alteration work.
 - 1. Use only proven protection methods, appropriate to each area and surface being protected.
 - 2. Provide temporary barricades, barriers, and directional signage to exclude the public from areas where alteration work is being performed.
 - 3. Erect temporary barriers to form and maintain fire-egress routes.
 - 4. Erect temporary protective covers over walkways and at points of pedestrian and vehicular entrance and exit that must remain in service during alteration work.
 - 5. Contain dust and debris generated by alteration work, and prevent it from reaching the public or adjacent surfaces.
 - 6. Provide shoring, bracing, and supports as necessary. Do not overload structural elements.
 - 7. Protect floors and other surfaces along hauling routes from damage, wear, and staining.
 - 8. Provide supplemental sound-control treatment to isolate demolition work from other areas of the building.
- B. Temporary Protection of Materials to Remain:
 - 1. Protect existing materials with temporary protections and construction. Do not remove existing materials unless otherwise indicated.
 - 2. Do not attach temporary protection to existing surfaces except as indicated as part of the alteration work program.
- C. Comply with each product manufacturer's written instructions for protections and precautions. Protect against adverse effects of products and procedures on people and adjacent materials, components, and vegetation.
- D. Utility and Communications Services:
 - 1. Notify District, Architect, authorities having jurisdiction, and entities owning or controlling wires, conduits, pipes, and other services affected by alteration work before commencing operations.
 - 2. Disconnect and cap pipes and services as required by authorities having jurisdiction, as required for alteration work.
 - 3. Maintain existing services unless otherwise indicated; keep in service, and protect against damage during operations. Provide temporary services during interruptions to existing utilities.
- E. Existing Drains: Prior to the start of work in an area, test drainage system to ensure that it is functioning properly. Notify Architect immediately of inadequate drainage or blockage. Do not begin work in an area until the drainage system is functioning properly.

1. Prevent solids such as adhesive or mortar residue or other debris from entering the drainage system. Clean out drains and drain lines that become sluggish or blocked by sand or other materials resulting from alteration work.
2. Protect drains from pollutants. Block drains or filter out sediments, allowing only clean water to pass.

F. Existing Roofing: Prior to the start of work in an area, install roofing protection as indicated on Drawings.

3.2 PROTECTION FROM FIRE

A. General: Follow fire-prevention plan and the following:

1. Comply with NFPA 241 requirements unless otherwise indicated. Perform duties titled "District's Responsibility for Fire Protection."
2. Remove and keep area free of combustibles, including rubbish, paper, waste, and chemicals, unless necessary for the immediate work.
 - a. If combustible material cannot be removed, provide fire blankets to cover such materials.

B. Heat-Generating Equipment and Combustible Materials: Comply with the following procedures while performing work with heat-generating equipment or combustible materials, including welding, torch-cutting, soldering, brazing, removing paint with heat, or other operations where open flames or implements using high heat or combustible solvents and chemicals are anticipated:

1. Obtain District's approval for operations involving use of welding or other high-heat equipment. Use of open-flame equipment is not permitted. Notify District at least 72 hours before each occurrence, indicating location of such work.
2. As far as practicable, restrict heat-generating equipment to shop areas or outside the building.
3. Do not perform work with heat-generating equipment in or near rooms or in areas where flammable liquids or explosive vapors are present or thought to be present. Use a combustible gas indicator test to ensure that the area is safe.
4. Use fireproof baffles to prevent flames, sparks, hot gases, or other high-temperature material from reaching surrounding combustible material.
5. Prevent the spread of sparks and particles of hot metal through open windows, doors, holes, and cracks in floors, walls, ceilings, roofs, and other openings.
6. Fire Watch: Before working with heat-generating equipment or combustible materials, station personnel to serve as a fire watch at each location where such work is performed. Fire-watch personnel shall have the authority to enforce fire safety. Station fire watch according to NFPA 51B, NFPA 241, and as follows:
 - a. Train each fire watch in the proper operation of fire-control equipment and alarms.
 - b. Prohibit fire-watch personnel from other work that would be a distraction from fire-watch duties.
 - c. Cease work with heat-generating equipment whenever fire-watch personnel are not present.
 - d. Have fire-watch personnel perform final fire-safety inspection each day beginning no sooner than 30 minutes after conclusion of work in each area to detect hidden or smoldering fires and to ensure that proper fire prevention is maintained.
 - e. Maintain fire-watch personnel at Project site until two hours after conclusion of daily work.

C. Fire-Control Devices: Provide and maintain fire extinguishers, fire blankets, and rag buckets for disposal of rags with combustible liquids. Maintain each as suitable for the type of fire risk in each work area. Ensure that nearby personnel and the fire-watch personnel are trained in fire-extinguisher and blanket use.

D. Sprinklers: Where sprinkler protection exists and is functional, maintain it without interruption while operations are being performed. If operations are performed close to sprinklers, shield them temporarily with guards.

1. Remove temporary guards at the end of work shifts, whenever operations are paused, and when nearby work is complete.

3.3 PROTECTION DURING APPLICATION OF CHEMICALS

- A. Protect motor vehicles, surrounding surfaces of building, building site, plants, and surrounding buildings from harm or spillage resulting from applications of chemicals and adhesives.
- B. Cover adjacent surfaces with protective materials that are proven to resist chemicals selected for Project unless chemicals being used will not damage adjacent surfaces as indicated in alteration work program. Use covering materials and masking agents that are waterproof and UV resistant and that will not stain or leave residue on surfaces to which they are applied. Apply protective materials according to manufacturer's written instructions. Do not apply liquid masking agents or adhesives to painted or porous surfaces. When no longer needed, promptly remove protective materials.
- C. Do not apply chemicals during winds of sufficient force to spread them to unprotected surfaces.
- D. Neutralize alkaline and acid wastes and legally dispose of off District's property.
- E. Collect and dispose of runoff from chemical operations by legal means and in a manner that prevents soil contamination, soil erosion, undermining of paving and foundations, damage to landscaping, or water penetration into building interior.

3.4 GENERAL ALTERATION WORK

- A. Have specialty work performed only by qualified specialists.
- B. Ensure that supervisory personnel are present when work begins and during its progress.
- C. Record existing work before each procedure (preconstruction), and record progress during the work. Use digital preconstruction documentation photographs. Comply with requirements in Section 013233 "Photographic Documentation."
- D. Perform surveys of Project site as the Work progresses to detect hazards resulting from alterations.
- E. Notify Architect of visible changes in the integrity of material or components whether from environmental causes including biological attack, UV degradation, freezing, or thawing or from structural defects including cracks, movement, or distortion.
 - 1. Do not proceed with the work in question until directed by Architect.
- F. Refer to Section 024100 "General Demolition Procedures" for requirements specific to demolition work that may also apply to alterations work of this Section.

END OF SECTION 013516

SECTION 013573 - DELEGATED DESIGN REQUIREMENTS AND PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes procedures for portions of Work under this Contract that include delegated design requirements and procedures.
- B. Related Requirements:
 - 1. Section 013300 "Submittal Procedures" for quality control of submittal procedure and coordination with delegated design requirements.

1.2 DEFINITIONS

- A. Delegated Design: A portion or component of the Work identified by the Contract Documents to be designed by the Contractor, or an entity assigned by the Contractor, to satisfy performance and design criteria specified in the Contract Documents for that portion or component.
- B. Registered Design Professional: Design professional, assigned by the Contractor, who is responsible for providing the delegated design work, and for certifying that the work is in compliance with the specified performance requirements and design criteria. Design professional shall be legally qualified to practice in jurisdiction where Project is located and shall be experienced in providing delegated design services of the kind indicated. Delegated design services are defined as those performed for installation of the system, assembly or product that are similar in material, design, and extent to those indicated for this Project.
- C. AHJ: Authority having jurisdiction.
- D. Technical Sections: Specification sections included in Divisions 02 through 33 of the Project Manual.

1.3 SUBMITTAL PROCEDURES

- A. Performance and Design Criteria: Where delegated design services are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If specific performance and design criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
 - 2. Architect's and Engineer's review of delegated design submittal shall be for conformance with performance and design criteria only.
- B. Delegated-Design Services Submittal: Include Shop Drawings, Product Data, and other required submittals indicated in individual technical sections. Submit digitally signed PDF electronic file of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
 - 1. In addition to other submittal requirements specified in other technical sections, at minimum, include the following in delegated design submittal:
 - a. Statement of design and performance criteria identified by the Contract Documents.
 - b. Assumptions.
 - c. Details, calculations, etc. related to the performance criteria.
 - d. Reactions to structure (where applicable).
 - e. Instructions for fabrication, assembly, installation, and interface with other trades.
 - 2. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

- C. BIM File Incorporation: Incorporate delegated-design drawing and data files into Building Information Model established for Project.
1. Prepare delegated-design drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.
- D. Submittal Procedures for Delegated Design Components:
1. Comply with requirements specified for other types of submittals included in this Section, including, but not limited to, form and procedures for delivering submittals.
 - a. Submit delegated design documents for approval prior to fabrication of components included in delegated design work.
 - b. Architect's review of delegated design submittals is for the limited purpose of checking for general conformance with information given and the design intent expressed in the Contract Documents. Architect will review submittals consistent with this limited purpose.
 - 1) Architect's review does not lessen nor shift burden or responsibility from Contractor to Architect or Owner.
 - 2) If during submittal review, Architect notes any deficiencies or errors, submittal will be returned with comments. Otherwise, there will be no responsive action by Architect.
 2. Delegated Design Submittal Schedule: Submit list of items identified in the Contract Documents that require delegated design. For each item, include the delegated design entity and the registered design professional.
 - a. If required, submit schedule to the authority having jurisdiction.
 3. Preliminary Submission: In order to avoid engineering and detailing of an unacceptable design, and if required by individual technical section, submit to Architect, preliminary documentation describing registered design professional's design prior to preparing engineering calculations and shop drawings.
 4. Delegated Design Submission: Submit final delegated design documents to Architect and AHJ if required for review, allowing not less than 10 days for review by Architect, and Architect's consultants and AHJ.
 - a. Comply with AHJ requirements.
 - b. Ensure registered design professional's signed seal is affixed to documents in accordance with jurisdictional requirements.
 - c. Make corrections noted by Architect and comply with AHJ requirements.

1.4 RESPONSIBILITIES

- A. General Contractor's Responsibilities:
1. Ensure drawings, calculations, specifications, and other documentation provided by registered design professional are complete and are sealed and signed by the registered design professional in accordance with requirements of AHJ. Architect and Owner shall be entitled to rely on the completeness and accuracy of the documentation provided by the registered design professional.
 2. Coordinate and assign complete responsibility for design, documentation, calculations, and submittal of delegated design components.
 3. Coordinate components requiring delegated design with adjacent or related systems whether designed by Architect or another entity. Ensure complete, operational systems that perform their intended are provided.
 4. When required to be reviewed by AHJ, submit delegated design documentation for in a timely manner that will not negatively impact Project's construction schedule.
 5. Performance requirements and design criteria are described in each technical section requiring delegated design. Conduct thorough review of other related portions of the Contract Documents to ensure inclusion of full scope of work in delegated design preparation and submittals.
 - a. Provide products and systems complying with specific performance and design criteria indicated.

6. Comply with quality assurance requirements specified in individual technical sections containing delegated design requirements.
 7. Comply with accessibility guidelines, codes, policies, and standards required by the AHJ, applicable to the project, and as indicated.
- B. Registered Design Professional: Responsibilities include, but are not limited to, the following:
1. Sole responsibility to ensure delegated design accommodates all building movements, including, but not limited to deflection, rotation, creep, shrinkage, live loads, wind loads, and loads, interim and otherwise, resulting from means and methods.
 2. If applicable, prepare documentation required by AHJ.
 3. Prepare delegated design submittals that are sealed and signed by registered design professional.
- C. Architect's Responsibilities: Architect will review and mark submittals in accordance with procedures defined in Section 013300 "Submittal Procedures", using the action codes defined in that section.

1.5 SCHEDULING

- A. Schedule delegated design activities and submittals to occur in a timely manner that will not negatively impact Project's construction schedule.
1. Allow sufficient time for Architect's review of delegated design submittals.
 2. If Architect's approval of shop drawings relating to delegated design components is required prior to application for permit, schedule and sequence delegated design shop drawing review prior to permit submittal. Comply with requirements of Section 013300 "Submittal Procedures."
- B. Owner will not be responsible to pay for delays, additional products, additional hours of work, including overtime, restocking or rework required due to failure by Contractor to coordinate delegated design work with work of other trades.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 013573

SECTION 014100 - REGULATORY REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes regulatory requirements applicable to Contract.

1.2 REFERENCES TO REGULATORY REQUIREMENTS

- A. Codes, laws, ordinances, rules and regulations referred to shall have full force and effect as though printed in full in these specifications.
- B. Conform to referenced codes, laws, ordinances, rules and regulations, which are in effect on date of receipt of bids.

1.3 CODES

- A. Codes, which apply to Contract, include, but are not limited to, the following:
 - 1. Current California Building Code (Part 2, Title 24, C.C.R.)
 - 2. Current California Electrical Code (Part 3, Title 24, C.C.R.)
 - 3. Current California Mechanical Code (Part 4, Title 24, C.C.R.)
 - 4. Current California Plumbing Code (Part 5, Title 24, C.C.R.)
 - 5. Current State Elevator Safety Regulations (Part 7, Title 24, C.C.R.)
 - 6. Current California Fire Code (Part 9, Title 24, C.C.R.)
 - 7. Current California Energy Code (Part 6, Title 24, C.C.R.)

1.4 LAWS, ORDINANCES, RULES AND REGULATIONS

- A. During prosecution of Work to be done under Contract, comply with applicable laws, ordinances, rules and regulations, including, but not limited to, the following:
- B. Federal
 - 1. Americans With Disabilities Act
 - 2. 29 CFR, Section 1910.1001, Asbestos
 - 3. 40 CFR, Subpart M, National Emission Standards for Asbestos
 - 4. Executive Order 11246
- C. State of California
 - 1. California Code of Regulations, Titles 5, 8, 19, 21, 24
 - 2. California Education Code
 - 3. California Public Contract Code
 - 4. California Health and Safety Code
 - 5. California Government Code
 - 6. California Labor Code
 - 7. California Civil Code
 - 8. California Code of Civil Procedure
 - 9. CPUC General Order 95, Rules for Overhead Electric Line Construction
 - 10. CPUC General Order 128, Rules for Construction of Underground Electric Supply and Communications Systems
- D. State of California Agencies
 - 1. Bay Area Air Quality Management District (BAAQMD / www.baaqmd.gov)
 - 2. State and Consumer Services Agency
 - 3. Department of General Services

4. Division of the State Architect

E. Local Agencies:

1. City of Hayward, California (www.ci.hayward.ca.us)
2. City of Livermore, California [Livermore, CA | Home \(livermoreca.gov\)](http://livermore.ca.gov)

1.5 COMPLIANCE WITH AMERICANS WITH DISABILITIES ACT

- A. Contractor acknowledges that, pursuant to the Americans with Disabilities Act (ADA), programs, services and other activities provided by a public entity to the public, whether directly or through a contractor, must be accessible to the disabled public. Contractor shall provide the services specified in this Agreement in a manner that complies with the ADA and any and all other applicable federal, state and local disability rights legislation. Contractor agrees not to discriminate against disabled persons in the provision of services, benefits or activities provided under this Agreement and further agrees that any violation of this prohibition on the part of Contractor, its employees, agents or assigns shall constitute a material breach of this Agreement.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 014110 - REGULATORY REQUIREMENTS - HAZARDOUS WASTE

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes regulatory requirements applicable to Contract work in connection with hazardous waste abatement and disposal, when encountered during demolition or construction, including, but not limited to, asbestos and asbestos containing materials, lead based paint, polychlorinated biphenyls, petroleum contaminated soils and materials, construction and demolition debris and any other hazardous substance or hazardous waste.
- B. This section supplements Section 014100 and the work specific listings of applicable regulatory requirements elsewhere in the specifications.
- C. Related Sections.
 - 1. Section 014100: Regulatory Requirements.

1.2 REFERENCES TO REGULATORY REQUIREMENTS

- A. Codes, laws, ordinances, rules and regulations applicable to the Work shall have full force and effect as though printed in full in these specifications. Codes, laws, ordinances, rules and regulations are not furnished to Contractor, since Contractor is assumed to be familiar with their requirements. The listing herein of applicable codes, laws and regulations for hazardous waste abatement work is supplied to Contractor as a courtesy and shall not limit Contractor's responsibility for complying with all applicable laws, regulations or ordinances having application to the Work. Where conflict among the requirements or with these specifications exists, the most stringent requirements shall be used.
- B. Contractor's work shall conform to all applicable codes, laws, ordinances, rules and regulations that are in effect on date of receipt of bids.

1.3 LAWS, ORDINANCES, RULES AND REGULATIONS

- A. During prosecution of Work under Contract, Contractor shall comply with applicable laws, ordinances, rules and regulations, including, but not limited to, those listed below.
- B. Federal:
 - 1. Statutory Requirements:
 - a. Resource Conservation and Recovery Act, 42 U.S.C.. 6901 et seq.
 - b. Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986,42 U.S. C" 9601 et seq.
 - c. Toxic Substances Control Act of 1976,15 U.S.C.. 2601 et seq.
 - d. Hazardous Materials Transportation Act of 1975, 49 U.S. C" 1801 et seq.
 - e. Clean Water Act, 33 U.S.C.. 1251 et seq.
 - f. Safe Drinking Water Act, 42 U.S. C.. 3001 et seq.
 - g. Clean Air Act, section 112, 42 U.S. C.. 7412
 - h. Occupational Safety and Health Act of 1970, 29 U.S.C.. 651 et seq.
 - i. Underground Storage Tank Law, 42 U.S. C.. 6991 et seq.
 - j. The Emergency Planning and Community Right to Know Act of 1986,42 U.S.C.. 11001 et seq.
 - 2. Environmental Protection Agency (EPA):
 - a. 40 C.F.R. Parts. 260, 264, 265, 268, 270
 - b. 40 C.F.R. Parts 258 et seq.

- c. 40 C.F.R. Part 761
 - d. 40 C.F.R. Parts 122-124
 - 3. Occupational Safety and Health Administration (OSHA):
 - a. OSHA Worker Protection Standards, Title 29 CFR Part 1926.58, Construction Standards and 29 CFR 1910.1001 General Industry Standard

 - j. Safe Drinking Water and Toxic Enforcement Act of 1986, Health & Saf. Cod~ 25249.5 et seq. (Proposition 65)
 - k. Above Ground Petroleum Storage Act, Health and Safety Code. 25270 et seq.
 - 2. Hazardous Materials Release Response Plans and Inventory, California Health and Safety Code Chapter 6.95.
 - 3. Administrative Code and Regulations:
 - a. 22 C.C.R.. 6600 et seq.
 - b. Title 22 C.C.R.. Standards for Management of Hazardous and Extremely Hazardous Waste
 - c. DTSC Treatment Standard for PCB Wastes, Title 22 C.C.R.,. 66268.110
 - d. Cal OSHA Worker Protection Standards, Title 8 C.C.R.. 1529, 5208
 - e. Title 8 C. C. R.. 1532.1, Lead in Construction
 - f. 22 C.C.R.. 66999(b)
 - g. Title 23 C.C.R.. 2610 et seq.
 - 4. Local Agency Requirements:
 - a. Bay Area Air Quality Management District, Fugitive Dust Rules
 - b. Bay Area Air Quality Management District Regulation 11-2-303
 - c. State Water Resource Control Board, General Construction Activity Stormwater Permit Requirements (Order 92-0S DWQ)
 - 5. City Requirements:
 - a. Hayward Fire Department (www.haywardcal.us/fire_dept/fd.htm)
 - b. Livermore-Pleasanton Fire Department Livermore Fire Department | Home Fire (lfire.org)
 - c. Livermore Municipal Water Department Recycled Water | Livermore, CA (livermoreca.gov)
 - d. Ordinances

1.4 PERMITS

- A. Contractor shall comply with, implement or acknowledge effectiveness of all CLPCCD held permits, and initiate and cooperate in securing all required notifications or approvals therefore, including but not limited to permits affecting environmental work and the following:
1. BAAQMD, Permit to Excavate or Treat Contaminated Soil;
 2. State Water Resources Control Board, General Construction Activity Stormwater Permit

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 014113 - ADDITIONAL REQUIREMENTS FOR DSA REVIEWED PROJECTS

PART 1 - GENERAL

1.1 DSA DEFERRED APPROVALS

- A. Refer to Contract Drawings.

1.2 INSPECTION AND SUPERVISION

- A. Supervision by DSA shall be in accordance with Section 4-334 of Part 1, Title 24, CCR.
- B. District shall employ a full-time Project Inspector approved by DSA. The Project Inspector shall observe construction in accordance with Section 4-333(b) and 4-342 of Part 1, Title 24, CCR.
- C. Reports: Project Inspector shall submit the following in accordance with DSA IR A-7.
 - 1. Start of Project Report: Notify DSA of start of construction in accordance with Section 4-331 of Part 1, Title 24, CCR.
 - 2. Semi-Monthly Reports: Comply with Section 4-337 of Part 1, Title 24, CCR.
 - 3. Verified Reports: Comply with Section 4-336 of Part 1, Title 24, CCR.
- D. Special Inspection Requirements:
 - 1. Comply with Section 4-333(c) of Part 1, Title 24, CCR.
 - 2. Special inspection costs are to be paid by the Owner.
 - 3. Conduct special inspection as per DSA Structural Tests and Inspections Sheet (SSS 103-1).

1.3 TESTING LABORATORY REQUIREMENTS

- A. Comply with Section 4-335 of Part 1, Title 24, CCR.
- B. The Owner shall select the testing Laboratory approved by DSA, Architect, and Structural Engineer.
- C. Sampling and testing shall be performed by properly qualified persons in accordance with American Society for Testing and Materials (ASTM) standards.
- D. Conduct tests as per DSA Structural Tests and Inspections Sheet (SSS 103-1).
- E. Submit one copy of test reports to DSA.

1.4 ADDENDA AND CHANGE ORDERS

- A. Comply with Section 4-338 of Part 1, Title 24, CCR.
- B. Comply with DSA IR A-6.
- C. Obtain DSA approval for changes to code-regulated construction and inspection/testing functions prior to start of that work. Code-regulated construction refers to work that is regulated by code provisions applicable to public school construction, including those adopted by DSA Structural Safety (DSA/SS), DSA Access Compliance (DSA/AC) and State Fire Marshal (SFM).
- D. Changes can be approved through either the change order (CO) process or preliminary change order (PCO) process. Comply with DSA IR A-6, Sub-paragraph 2.2 - Change Order Process and DSA IR A-6, Sub-paragraph 2.1 - Preliminary Change Order Process.
- E. Do not begin any work under addendum or change order until required DSA written approval is obtained.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 014200 - REFERENCES AND DEFINITIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes reference standards, abbreviations, symbols and definitions used in Contract Documents.
- B. Full titles and edition dates are given in this section for standards cited in other sections of Specifications.
- C. Material and workmanship specified by reference to number, symbol, or title of specific standard such as state standard, commercial standard, federal specifications, technical society, or trade association standard, or other similar standard shall comply with requirements of standards except when more rigid requirements are specified or required by applicable codes.
- D. Standards referred to, except as modified herein, shall have full force and effect as though printed in the Contract Documents. Standards are not furnished to Contractor, since manufacturers and trades involved are assumed to be familiar with their requirements.

1.2 REFERENCE TO STANDARDS AND SPECIFICATIONS OF TECHNICAL SOCIETIES; REPORTING AND RESOLVING DISCREPANCIES:

- A. Reference to standards, specifications, manuals or codes of any technical society, organization or association, or to the laws or regulations of any governmental authority, whether such reference be specific or by implication, shall mean the latest standard, specification, manual, code or laws or regulations in effect at the time of opening of Bids, except as may be otherwise specifically stated in the Contract Documents.
- B. If during the performance of the Work, Contractor discovers any conflict, error, ambiguity or discrepancy within the Contract Documents or between the Contract Documents and any provision of any such law or regulation applicable to the performance of the Work or of any such standard, specification, manual or code or of any instruction of any supplier, Contractor shall report it in writing at once to Inspector, with copies to Construction Manager and Architect, and Contractor shall not proceed with the Work affected thereby until consent to do so is given by the Construction Manager.
- C. Except as otherwise specifically stated in the Contract Documents or as may be provided by Change Order, or supplemental instruction, the provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity or discrepancy between the Contract Documents and:
 - 1. The provisions of any such standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Contract Documents); or
 - 2. The provisions of any such laws or regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such law or regulation).
- D. No provision of any such standard, specification, manual, code or instruction shall be effective to change the duties and responsibilities of CLPCCD, Contractor, Construction Manager, or Architect/Engineer, or any of their subcontractors, consultants, agents, or employees, from those set forth in the Contract Documents, nor shall it be effective to assign to CLPCCD, Architect/Engineer, Construction Manager, or any of their consultants, agents or employees any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

1.3 STANDARDS

- A. ACI (American Concrete Institute)

1. Standard 318, Building Code Requirements for Reinforced Concrete
- B. AISC (American Institute of Steel Construction)
 1. Specifications and Code of Standard Practice for Steel Buildings and Bridges
- C. ANSI (American National Standards Institute, formerly American Standards Association)

- 44. Additional abbreviations, used only on drawings or specifications, are listed thereon.

1.5 SYMBOLS

- A. Symbols, used only on Drawings, are shown thereon.

1.6 DEFINITIONS

- A. Wherever any of the words or phrases defined below, or a pronoun used in place thereof, is used in any part of the Contract Documents, it shall have the meaning here set forth:
 - 1. **ADDENDA:** Written or graphic instruments issued prior to the opening of Bids, which clarify, correct or change the bidding requirements or the Contract Documents. Addenda shall not include the minutes of the Pre-bid Conference and Site Visit.
 - 2. **ADDITIVE BID:** The sum to be added to the Base Bid if the change in scope of work as described in Additive Bid is accepted by CLPCCD.
 - 3. **AGREEMENT:** Agreement is the basic contract document that binds the parties to construction Work. Agreement defines relationships and obligations between CLPCCD and Contractor and by reference incorporates Conditions of Contract, Drawings, and Specifications and contains Addenda and all Modifications subsequent to execution of Contract.
 - 4. **ALTERNATE:** Work added to or deducted from the Base Bid, if accepted by CLPCCD.
 - 5. **APPROVED EQUAL:** Approved in writing by CLPCCD as being of equivalent quality, utility and appearance.
 - 6. **ARCHITECT or ARCHITECT/ENGINEER:** The person holding a valid California State Architect's license, whose firm has been designated within the Contract Documents as the Architect to provide architectural services on the project. Refer to Section 341, Part 1, Title 24, C. C. R.
 - 7. When the Architect is referred to within the Contract Documents and no Architect has in fact been designated, then the matter shall be referred to CLPCCD. The term Architect shall be construed to include all its consultants retained for the project, as well as employees of the Architect. When the designated Architect is an employee of CLPCCD, his authorized representations on the project within the district will be included under the term Architect.
 - 8. **BID:** The offer or proposal of the Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.
 - 9. **BIDDER:** One who submits a Bid.
 - 10. **CLPCCD:** Chabot-Las Positas Community College District. Unless otherwise expressly indicated or required by the context of usage, the terms "District" and "Owner" as used in the Contract Documents shall be deemed references to CLPCCD.

11. **CLPCCD-FURNISHED, CONTRACTOR-INSTALLED:** Items furnished by CLPCCD at its cost for installation by Contractor at its cost under this Contract.
12. **CLPCCD REPRESENTATIVE(S):** The person or persons assigned by CLPCCD to be CLPCCD's representatives or, if so designated, agent(s) at the site.
13. **BY CLPCCD:** Work that will be performed by CLPCCD or its agents at the CLPCCD's expense.
14. **BY OTHERS:** Work that is outside scope of Work to be performed by Contractor under this Contract, which will be performed by CLPCCD, other contractors, or other means.
15. **CHANGE ORDER:** A written instrument prepared by CLPCCD and signed by CLPCCD and Contractor, stating their agreement upon all of the following:
 16. a change in the Work,
 17. the amount of the adjustment in the Contract Sum, if any, and
 18. the amount of the adjustment in the Contract Time, if any.
19. As appropriate, change orders are subject to approval by the Division of the State Architect. Refer to section 4-338, Part 1, Title 24, California Code of Regulations.
20. **CONCEALED:** Work not exposed to view in the finished Work, including within or behind various construction elements.
21. **CONTRACT CONDITIONS:** Conditions of Contract define basic rights, responsibilities and relationships of Contractor and CLPCCD and consists of two parts: General Conditions and Supplementary Conditions.
 - a. General Conditions are general clauses, which are common to the CLPCCD Contracts.
 - b. Supplementary conditions modify or supplement General Conditions to meet specific requirements for this Contract.
22. **CONSTRUCTION MANAGER:** CLPCCD's authorized representative, who shall represent CLPCCD in all matters relative to this Contract. Construction Manager may authorize agents and representatives to act in carrying out Construction Manager's duties, including a "Project Manager", to act under the authority of the Construction Manager. As CLPCCD's agent, the Construction Manager is the beneficiary of all contract obligations of Contractor to CLPCCD, including without limitation, all releases and indemnities. Construction Manager shall not have any personal liability arising from this Contract or any activity there under and Contractor releases Construction Manager fully from all loss, cost, damage, expense or liability arising out of or connected with this Project, whether arising from contract, negligence or tort claims of all kinds.
23. **CONTRACT DOCUMENTS:** Contract Documents shall consist of the documents identified as the Contract Documents in Contract Agreement, plus all changes, addenda and modifications thereto.
24. **CONTRACT MODIFICATION:** Either:
 - a. a written amendment to Contract signed by Contractor and CLPCCD; or
 - b. a Change Order; or
 - c. a written directive for a minor change in the Work issued by CLPCCD.
25. **CONTRACT SUM:** The sum stated in the Agreement and, including authorized adjustments, the total amount payable by CLPCCD to Contractor for performance of the Work and the Contract Documents. (Also referred to as the CONTRACT PRICE.)
26. **CONTRACT TIMES:** The number or numbers of days or the dates stated in the Agreement (i) to achieve substantial completion of the Work or designated milestones and/or (ii) to complete the Work so that it is ready for final payment and is accepted.
27. **CONTRACTOR:** The person or entity identified as such in the Agreement and referred to throughout the Contract Documents as if singular in number and neuter in gender. The term "Contractor" means the Contractor or its authorized representative.
28. **CONTRACTOR'S EMPLOYEES:** Persons engaged in execution of Work under Contract as direct employees of Contractor, as subcontractors, or as employees of subcontractors.
29. **DATE OF SUBSTANTIAL COMPLETION:** Date of Substantial Completion of Work or designated portion thereof is date certified by Construction Manager when construction is sufficiently complete in accordance with Contract Documents for CLPCCD to occupy Work or designated portion thereof for its use for which it is intended.
30. **DAY:** One calendar day, unless the word "day" is specifically modified to the contrary.
31. **DEDUCTIVE BID:** The sum to be subtracting to the Base Bid if the change in scope of work as described in Deductive Bid is accepted by CLPCCD.

32. **DEFECTIVE:** An adjective which, when modifying the word "Work", refers to Work that is unsatisfactory or unsuited for the use intended, faulty, or deficient, that it does not conform to the Contract Documents, or does not meet the requirements of any inspection, reference standard, test or approval referred to in the Contract Documents (including but not limited to approval of samples and "or equal" items), or has been damaged prior to final payment (unless responsibility for the protection thereof has been assumed by CLPCCD). Construction Manager is the judge of whether Work is defective.
33. **DRAWINGS:** The graphic and pictorial portions of Contract Documents, wherever located and whenever issued, showing the design, location and dimensions of the Work, generally including plans, elevations, sections, details, schedules and diagrams.
34. **ENGINEER:** Where referenced in the Contract Documents, the person holding a valid California State Engineer's license, whose firm has been designated (if any designated) within the Contract Documents as the Engineer to provide engineering services on the project. Refer to section 4-341, Part 1, Title 24, C.C.R.
35. **EQUAL:** Equal in opinion of Architect. Burden of proof of equality is responsibility of Contractor.
36. **EXPOSED:** Work exposed to view in the finished Work, including behind louvers, grilles, registers and various other construction elements.
37. **FINAL ACCEPTANCE or FINAL COMPLETION:** All Work satisfactorily completed in accordance with Contract Documents. It includes, but is not limited to:
 - a. All Systems having been tested and accepted as having met requirements of Contract Documents.
 - b. All required instructions and training sessions having been given by Contractor.
 - c. All as-built drawings and operations and maintenance manuals and Machine Inventory Sheets having been submitted by Contractor, reviewed by Architect/Engineer and accepted by CLPCCD.
 - d. All punch list work, as directed by CLPCCD, having been completed by Contractor.
 - e. Generally all work, except Contractor maintenance after Final Acceptance, having been completed to satisfaction of CLPCCD.
38. **FORCE-ACCOUNT:** Work directed to be performed without prior agreement as to lump sum or unit price cost thereof, and which is to be billed at cost for labor, materials, equipment, taxes, and other costs, plus a specified percentage for overhead and profit.
39. **FURNISH:** Supply only, do not install.
40. **INDICATED:** Shown or noted on the Drawings.
41. **INSPECTOR:** The person engaged by CLPCCD to inspect the workmanship, materials, or manner of construction of buildings or portions of buildings, to determine if such construction complies with the Contract Documents and applicable codes. The inspector is subject to approval by the Architect, CLPCCD and, as appropriate, Division of the State Architect, and he will report to CLPCCD. Refer to section 4-333 and section 4-342, Part 1, Title 24, California Code of Regulations. The terms "Inspector" and "Project Inspector" are used interchangeably in the Contract Documents.
42. **INSTALL:** Install or apply only, do not furnish.
43. **LATENT:** Not apparent by reasonable inspection, including but not limited to, the inspections and research required as a condition to bidding under the General Conditions.
44. **MATERIAL OR MATERIALS:** These words shall be construed to embrace machinery, manufactured articles, materials of construction (fabricated or otherwise), and any other classes of material to be furnished in connection with Contract, except where a more limited meaning is indicated by context.
45. **MILESTONE:** A principal event specified in Contract Documents relating to an intermediate completion date or time prior to Substantial Completion of all Work.
46. **MODIFICATION:** Same as Contract Modification.
47. **NOT IN CONTRACT:** Work that is outside the scope of work to be performed by Contractor under this Contract.
48. **NOTICE OF AWARD:** A written notice given by CLPCCD to lowest responsive, responsible bidder advising that Bidder's bid and other qualifying information is acceptable to CLPCCD, requiring Bidder to fulfill the requirements of Article 1.03 of Document 00600 General Conditions.
49. **NOTICE TO PROCEED:** A written notice given by CLPCCD to Contractor fixing the date on which the Contract Time will commence to run and on which contractor shall start to perform Contractor's obligations under the Contract Documents.
50. **OFF SITE:** Outside geographical location of the Project.

51. **OWNER (DISTRICT):** Chabot Las Positas Community College District (CLPCCD).
52. **PROGRESS REPORT:** a periodic report submitted by Contractor to CLPCCD with progress payment invoices accompanying actual work accomplished to the Project Schedule. See Section 01310 Progress Schedules and Reports, Document 00600 General Conditions.
53. **PROJECT:** Total construction of which Work performed under this Contract may be whole or part.
54. **PROJECT MANUAL:** Project Manual consists of Bidding Requirements, Agreement, Bonds, Certificates, Contract Conditions, and Specifications. The Project Manual is deemed to include and incorporate all matters noted in any Addenda issued by or on behalf of the District during the bidding for the Work.
55. **PROJECT STABILIZATION AGREEMENT:** The Contractor or Subcontractor (CONTRACTOR) on this project accepts and agrees to be bound by the terms and conditions of the "Chabot-Las Positas Project Stabilization Agreement", together with any and all amendments and supplements now existing or which are later made by executing the Letter of Assent.
56. **PROVIDE:** Furnish and install.
57. **REQUEST FOR INFORMATION (RFI):** A document prepared by Contractor, CLPCCD or Architect/Engineer requesting information from one of the parties regarding the Project or Contract Documents. The RFI system is also a means for CLPCCD and Architect to submit Contract Document clarifications or supplements to Contractor.
58. **RFI-REPLY:** A document consisting of supplementary details, instructions or information issued by the Architect/Engineer, which clarifies or supplements Contract Documents and with which Contractor shall comply. RFI-Replies do not constitute changes in Contract Sum or Contract Times except as otherwise agreed in writing by CLPCCD. RFI-Replies will be issued through the RFI administrative system.
59. **SAMPLES:** Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.
60. **SHOP DRAWINGS:** All drawings, diagrams, illustrations, schedules and other data or information which are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the work.
61. **SHOWN:** As indicated on Drawings.
62. **SITE:** The particular geographical location of Work performed pursuant to Contract, including staging areas, work areas, storage and lay down areas, access and parking.
63. **SPECIFICATIONS:** The written portion of the Contract Documents consisting of requirements for materials, equipment, construction systems, standards and workmanship for the Work, and performance of related services; and are contained in Divisions 1 through 32.
64. **SPECIFIED:** As written in Specifications.
65. **SUBCONTRACTOR:** A person or entity who has a direct contract with Contractor to perform a portion of the Work at the site. The term "subcontractor" is referred to throughout the Contract Documents as if singular in number and neuter in gender and means a subcontractor or an authorized representative of the subcontractor. The term "subcontractor" does not include a separate contractor or subcontractors of a separate contractor.
66. **SUBSTANTIAL COMPLETION:** The Work (or a specified part thereof) has progressed to the point where, in the opinion of the Construction Manager and the Architect/Engineer as evidenced by a Certificate of Substantial Completion, it is sufficiently complete, in accordance with Contract Documents, so that the Work (or specified part) can be utilized for the purposes for which it is intended; or if no such certificate is issued, when the Work is complete and ready for final payment is evidenced by written recommendation of the Construction Manager and the Architect/Engineer for final payment. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.
67. **SUPPLEMENTAL INSTRUCTION:** A written work change directive to Contractor from Architect/Engineer, approved by Construction Manager, ordering alterations or modifications which do not result in change in Contract Sum or Contract Times, and do not substantially change Drawings or Specifications.
68. **UNDERGROUND FACILITIES:** All pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels or other such facilities or attachments, and any encasements containing such facilities which have been installed underground to furnish any of the following services or materials: Electricity, gases, steam, liquid petroleum products, telephone or other communications, cable television, sewage and drainage removal, traffic or other control systems or water.
69. **VERIFIED REPORT:** A periodic verified report submitted to DSA. Refer to sections 4-336, 4-337 and 4-343, Part 1, Title 24, California Code of Regulations.

70. **WORK:** The entire completed construction or the various separately identifiable parts thereof required to be furnished under the Contract Documents. Work includes and is the result of performing or furnishing labor and furnishing and incorporating materials and equipment into the construction, and performing or furnishing services and furnishing documents, all is required by the Contract Documents. Wherever the word "work" is used, rather than the word "Work", it shall be understood to have its ordinary and customary meaning.
- B. Wherever words "as directed", "as required", "as permitted", or words of like effect are used, it shall be understood that direction, requirements, or permission of CLPCCD or Construction Manager is intended. Words "sufficient", "necessary", "proper", and the like shall mean sufficient, necessary or proper in judgment of CLPCCD or Construction Manager. Words "approved", "acceptable", "satisfactory", "favorably reviewed" or words of like import, shall mean approved by, or acceptable to, or satisfactory to, or favorably reviewed by CLPCCD or Construction Manager.
- C. Wherever the word "may" is used, the action to which it refers is discretionary. Wherever the word "shall" is used, the action to which it refers is mandatory.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 014500 - QUALITY CONTROL

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Quality assurance and control of installation.
- B. References.
- C. Mock-Up.
- D. Inspection and testing laboratory services.
- E. Manufacturer's field services.

1.2 RELATED SECTIONS

- A. Submission of manufacturers' instructions and
- B. Sections requiring Laboratory Testing:
 - 1. Section 013300 - Submittals: certificates
 - 2. Division 31 - Earthwork

1.3 QUALITY ASSURANCE AND CONTROL OF INSTALLATION

- A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce Work of specified quality.
- B. Comply fully with manufacturers' instructions, including each step in sequence.
- C. If manufacturers' instructions conflict with Contract Documents, request clarification from Architect/Engineer before proceeding.
- D. Comply with specified standards as a minimum quality for the Work except when more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.
- E. Perform work by persons qualified to produce workmanship of specified quality.
- F. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion or disfigurement.

1.4 REFERENCES

- A. Conform to reference standard by date of issue current on date specified in product sections.
- B. Should specified reference standards conflict with Contract Documents, request clarification from Architect/Engineer before proceeding.
- C. The contractual relationship of the parties to the Contract shall not be altered from the Contract Documents by mention or inference otherwise in any reference document.

1.5 **MOCK-UP**

- A. Mock-up and sample panels will be performed under various sections and identified as sample panels or mock-ups.
- B. Assemble and erect specified items with specified attachments, anchorage, flashing, seals and finishes.
- C. Where mock-up has been accepted by Architect/Engineer and is specified in product specification section to be removed, remove mock-up and clear area as directed.
- D. Whereas, mock-up submittals will be submitted until the acceptance by Architect/Engineer and Construction Manager.

1.6 **INSPECTION AND TESTING LABORATORY SERVICES**

- A. CLPCCD will appoint, employ and pay for services of an independent firm to perform inspection and testing.
- B. The independent firm will perform inspections, tests, and other services specified in individual specification sections and as required by the Architect/Engineer. Promptly notify Construction Manager, Architect/Engineer, DSA, Project Inspector, and Contractor of observed irregularities or deficiencies of work or products.
- C. Reports will be submitted by the independent firm, one copy each, to the Construction Manager, Architect, Engineer, Division of the State Architect, Contractor and Project Inspector. Indicate observations and results of tests and indicate compliance or non-compliance with Contract Documents and Title 24, C.C.R. specifically, each report will include the following:
 - 1. Date issued; date and time of sampling or inspection; date of test.
 - 2. Project title and number; testing laboratory name, address and telephone number; name and signature of laboratory inspector.
 - 3. Location of sampling or test; temperature and weather condition.
 - 4. Type of inspection or test; identification of product and specification section; results of test and compliance with Contract Documents and Title 24, C.C.R.
 - 5. Perform additional tests as required by Architect/Engineer and/or Project Inspector; interpret test results, when requested by Architect/Engineer.
 - 6. Special Inspections: as shown on attached Tests & Inspections (T&I) list for each section.
- D. Contractor shall cooperate with independent firm; furnish samples of materials, design mix, equipment, tools, storage and assistance as requested.
 - 1. Notify Architect/Engineer 72 hours in advance and/or independent firm 24 hours prior to expected time for operations requiring services.
 - 2. Make arrangements with independent firm and pay for additional samples and tests required for Contractor's use.
 - 3. Employment of the laboratory shall in no way relieve Contractor's obligations to perform the work of the contract.
- E. Retesting required because of non-conformance to specified requirements shall be performed by the same independent firm on instructions by the Architect/Engineer and/or Project Inspector. Payment for retesting will be paid by the Contractor by deducting inspection or testing charges from the Contract Sum on the next scheduled payment.

1.7 **MANUFACTURER'S FIELD SERVICES**

- A. When specified in individual specification sections, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, startup of equipment as applicable, and to initiate instructions when necessary.

- B. Submit qualifications of observer to Construction Manager thirty (30) calendar days in advance of required observations. Observer shall be subject to approval of Construction Manager and Architect/Engineer.
- C. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.
- D. Refer to Section 013300 - Submittals: Manufacturers' Instructions.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 015000 - TEMPORARY FACILITIES

PART 1 - GENERAL

1.1 SUMMARY

- A. This section describes the temporary facilities and controls required for the Project site during demolition and construction. The Project site shall be maintained by Contractor as set forth in this Section.

1.2 TEMPORARY FACILITIES

- A. Contractor shall obtain permits for, install and maintain in safe condition, whatever scaffolds, hoisting equipment, barricades, walkways, or other temporary structures, which may be required to accomplish the work on the Project. Contractor shall enclose and secure Project Site, including lay down area with a temporary chain link fence with site screen. Such structures shall be adequate for the intended use and capable of safely accepting all loads that may be imposed upon them. They shall be installed and maintained in accordance with all applicable State and local codes and regulations.
- B. Contractor shall provide and maintain temporary heat from an approved source whenever in the course of the Work it may become necessary for curing and drying of materials or to warm spaces as may be required for the installation of materials or finishes.
- C. Contractor shall provide and maintain any and all facilities that may be required for dewatering in order that work may proceed on the Project. If it is necessary for dewatering to occur continually, Contractor shall have on hand whatever spare parts or equipment that may be required to prevent interruption of dewatering.
- D. Contractor shall provide and maintain all utility services necessary to perform the work under this Contract. These may include, but are not limited to, temporary electricity, water, gas, sewer and telephone, including charges and installation fees. Contractor shall furnish and maintain all means of distribution of utility services required within the site to properly complete the Project.
- E. Materials, tools, accessories, etc., shall be stored only where directed by CLPCCD. Storage area shall be kept neat and clean. Security of stored items shall be Contractor's responsibility.
- F. When flammable materials are stored on site, extra precautions, including clear identification, shall be the responsibility of Contractor.
- G. Contractor shall provide and maintain temporary toilets in quantities and locations as required by CAL/OSHA and other local codes and regulations. They shall be maintained and supplied in a usable and sanitary condition at all times.
- H. If water at construction site is determined to be non-potable by Inspector, Contractor shall provide and maintain adequate potable water stations at site until final completion of the Project.
- I. Contractor shall maintain an office at the Project site, which will be his headquarters for the Project. Any communications delivered to this office shall be considered as delivered to Contractor. Location and size of office shall be such that it will adequately serve the needs of Contractor's superintendent and assistants in the performance of their duties.
- J. Contractor shall also provide and maintain the following temporary facilities for the duration of the project. Contractor shall obtain approval of the plans and specifications for all the following temporary facilities from Construction Manager prior to delivery to job site. Construction Manager shall have the option to reject said facilities if they do not meet Construction Manager's needs.
- K. Contractor shall promptly remove all such Temporary Facilities when they are no longer needed for the work or for completion of the Project, mutually agreed upon by Contractor and CLPCCD.

- L. Contractor shall provide and maintain in the Temporary Facilities a copy of the California Code of Regulations Title 24 (latest edition) Parts I & II.

1.3 SIGNS

- A. No signs may be displayed on or about CLPCCD's property (except those required by law) without CLPCCD's specific approval; the size, content, and location to be as specified by CLPCCD.
 - 1. Temporary Signs: Provide other signs as indicated and as required by law or ordinance to inform public and individuals seeking entrance to Project, and for directional egress signs from adjacent buildings.
 - a. Provide temporary, directional signs, and emergency signs for construction personnel and visitors, and other patrons of the adjacent facilities.
 - 2. Maintain and touch up signs, so they are legible at all times.

1.4 USE OF ROADWAYS AND WALKWAYS

- A. Contractor shall never block or interfere with use of any existing roadway, walkway or other facility for vehicular or pedestrian traffic, from any party entitled to use it. Wherever and whenever such interference becomes necessary for the proper and convenient performance of the Work, and no satisfactory detour route exists, Contractor shall, before beginning the interference, provide a satisfactory detour, including temporary bridge if necessary, or other proper facility for traffic to pass around or over the interference. Contractor shall maintain the detour in a safe and satisfactory condition as long as the interference continues, all without extra payment unless otherwise expressly stipulated in the Specifications.

PART 2 - PRODUCTS

2.1 TEMPORARY CONSTRUCTION AIDS AND EQUIPMENT

- A. General: Provide construction aids, equipment, and support facilities and controls as needed and as applicable to Increment under construction.
- B. Portable Chain-Link Fencing: Minimum 2-inch, 0.148-inch- thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch- OD line posts and 2-7/8-inch- OD corner and pull posts, with 1-5/8-inch- OD top and bottom rails. Provide heavy, wind-resistant bases for supporting posts.
- C. Wood Enclosure Fence: Plywood, 8 feet high, unless otherwise indicated, framed with four 2-by-4-inch rails, with preservative-treated wood posts set on concrete footings spaced not more than 8 feet apart.
- D. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil minimum thickness, with flame-spread rating of 15 or less in accordance with ASTM E84 and passing NFPA 701 Test Method 2.
- E. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
- F. HVAC Equipment: Unless District authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
 - 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
 - 2. Heating, Cooling, and Dehumidifying Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

3. Permanent HVAC System: If District authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of construction and clean HVAC system as required in Section 017700 "Closeout Procedures."

PART 3 - EXECUTION

3.1 SUPPORT FACILITIES INSTALLATION

- A. General: Provide construction aids, equipment, and support facilities and controls as needed and as applicable to Increment under construction.
- B. Comply with the following:
 1. Provide construction for temporary field offices, shops, and sheds located within construction area or within 30 feet of building lines that is noncombustible in accordance with ASTM E136. Comply with NFPA 241.
 2. Maintain support facilities until Architect schedules Substantial Completion inspection. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to District.
- C. Storage and Staging: Use designated areas of Project site for storage and staging needs.
- D. Waste Disposal Facilities:
 1. Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."
 2. Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017000 "Contract Closeout."
- E. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.
 1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.
- F. Temporary Elevator Use: See Division 14 elevator Section for temporary use of new elevators.
- G. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.
- H. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.2 SITE ACCESS AND CONTROLS

- A. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings.
 1. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.
- B. Temporary Use of Planned Permanent Roads and Paved Areas: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.
 1. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.

2. Prepare subgrade and install subbase and base for temporary roads and paved areas in accordance with Section 312000 "Earth Moving."
 3. Recondition base after temporary use, including removing contaminated material, regrading, proofrolling, compacting, and testing.
 4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course in accordance with Section 321216 "Asphalt Paving."
- C. Traffic Controls: Comply with requirements of authorities having jurisdiction.
1. Protect existing site improvements to remain, including curbs, pavement, and utilities.
 2. Maintain access for fire-fighting equipment and access to fire hydrants.
- D. Parking: Use parking areas designated by District for construction personnel.

3.3 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.
1. Where access to adjacent properties is required in order to affect protection of existing facilities, obtain written permission from adjacent property owner to access property for that purpose.
- B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
- C. Temporary Erosion and Sedimentation Control:
1. Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, according to requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.
 - a. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant-protection zones.
 - b. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
 - c. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project.
 - d. Remove erosion and sedimentation controls, and restore and stabilize areas disturbed during removal.
- D. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
- E. Tree and Plant Protection:
1. Comply with requirements specified in Section 015639 "Temporary Tree and Plant Protection."
- F. Site Enclosure Fence: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people from easily entering site except by entrance gates.
1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
- G. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.

1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
 2. Remove snow and ice as required to minimize accumulations.
- H. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals, so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using materials approved by authorities having jurisdiction.
- I. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction as needed to maintain security. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each workday.
- J. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
- K. Temporary Egress: Provide temporary egress from adjacent existing occupied facilities as indicated and as required by authorities having jurisdiction. Provide signage directing occupants to temporary egress.
- L. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.
1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.
- M. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.
1. Prohibit smoking in construction areas. Comply with additional limits on smoking specified in other Sections.
 2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition in accordance with requirements of authorities having jurisdiction.
 3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
 4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign, stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.4 MOISTURE AND MOLD CONTROL

- A. Exposed Construction Period: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:
1. Protect porous materials from water damage.
 2. Protect stored and installed material from flowing or standing water.
 3. Keep porous and organic materials from coming into prolonged contact with concrete.
 4. Remove standing water from decks.
 5. Keep deck openings covered or dammed.
- B. Partially Enclosed Construction Period: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:
1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
 2. Keep interior spaces reasonably clean and protected from water damage.
 3. Periodically collect and remove waste containing cellulose or other organic matter.

4. Discard or replace water-damaged material.
 5. Do not install material that is wet.
 6. Discard and replace stored or installed material that begins to grow mold.
 7. Perform work in a sequence that allows wet materials adequate time to dry before enclosing the material in gypsum board or other interior finishes.
- C. Controlled Construction Period: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:
1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
 2. Use temporary or permanent HVAC system to control humidity within ranges specified for installed and stored materials.
 3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.
 - a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 hours are considered defective and require replacing.
 - b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Architect.
 - c. Remove and replace materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.5 OPERATION, TERMINATION, AND REMOVAL

- A. Maintenance: Maintain protection measures in good operating condition during demolition and construction until removal.
1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- B. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until directed by District.
- C. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
1. Materials and facilities that constitute temporary facilities are property of Contractor. District reserves right to take possession of Project identification signs.
 2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
 3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017000 "Contract Closeout."

END OF SECTION

SECTION 015639 – TEMPORARY TREE AND PLANT PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. General protection and pruning of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction or on adjacent properties.
- B. Related Sections:
 - 1. .
 - 2. Refer to Drawings for additional protection notes and identification of specific trees to be protected.

1.2 TREE PROTECTION PLAN

- A. A Tree Protection Plan shall be prepared by the Contractor in coordination with the project arborist. All project work will be conducted in accordance with the Tree Protection Plan.
- B. Ground-disturbing activities shall be conducted outside of the dripline of protected trees. When ground-disturbing activities (i.e., trenching, excavating) encounters roots smaller than two inches occurs outside of the dripline of protected trees, the roots shall be hand trimmed, making clear, clean cuts. All damaged, torn, and cut roots shall be given a clean cut to remove ragged edges, which promote decay.
- C. Trenches shall be filled within 24 hours, but, where, this is not possible, the side of the trench/excavation area adjacent to the protected trees shall be shaded with four layers of dampened, untreated burlap, wetted as frequently as necessary to keep the burlap wet.
- D. Roots two inches or larger, when encountered, shall be reported immediately to the Project Arborist, who shall decide whether the applicant may cut the roots as mentioned above or shall excavate by hand or with compressed air under the root. The root shall be protected with dampened burlap.
- E. In addition, the top two feet of the foundation closest to the protected trees shall be air spaded or hand dug under supervision of the Project Arborist to locate and evaluate any significant roots prior to mechanical excavation.
- F. Underground Utilities: To avoid conflict with roots, underground utilities shall be routed outside of an area, ten times the diameter of a protected tree. In addition, where it is not possible to reroute pipes or trenches, the utility shall be routed beneath the dripline, but as far away from the trunk as possible. The boring shall take place not less than three feet below the surface of the soil in order to avoid encountering feeder roots.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 016199 - MATERIAL AND EQUIPMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Products
- B. Transportation and handling.
- C. Storage and protection.

1.2 RELATED SECTIONS

- A. Section 011100 - Summary of Work.
- B. Section 014500 - Quality Control: Product Quality Monitoring.
- C. Section 016200 - Product Options and Substitutions.

1.3 PRODUCTS

- A. Products: Means new material, machinery, components, equipment, fixtures, and systems forming the Work. Does not include machinery and equipment used for preparation, fabrication, conveying and erection of the Work.
- B. Provide interchangeable components of the same manufacturer, for similar components.

1.4 TRANSPORTATION AND HANDLING

- A. Transport and handle products in accordance with manufacturer's instructions and construction schedules. Coordinate to avoid conflict with work and conditions at the site.
- B. Promptly inspect shipments to assure that products comply with requirements, quantities are correct, and products are undamaged.
- C. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage.

1.5 STORAGE AND PROTECTION

- A. Store and protect products in accordance with manufacturer's instructions, with seals and labels intact and legible. Store sensitive products in weather-tight, climate controlled enclosures.
- B. For exterior storage of fabricated products, place on sloped supports, above ground, to prevent soiling and staining.
- C. Provide off-site storage and protection when site does not permit on-site storage or protection.
- D. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to avoid condensation.
- E. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.

- F. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.
- G. Arrange storage of products to permit access for inspection. Periodically inspect to assure products are undamaged and are maintained under specified conditions.
- H. Provide substantial covering and protection after installation of products from damage due to traffic and subsequent construction operations. Remove when no longer needed.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 016200 - PRODUCT OPTIONS AND SUBSTITUTIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Procedures are described for selecting products and requesting substitutions of unlisted materials in lieu of materials named in the specifications or approved for use in addenda.
- B. Related Sections
 - 1. Section 012600: Contract Modification Procedures
 - 2. Section 013300: Submittal Procedures

1.2 CONTRACTOR'S OPTIONS

- A. For products specified only by reference standard: Select any product meeting that standard.
- B. For products specified by naming one or more products or manufacturers:
 - 1. Select products of any named manufacturer meeting specifications.
 - 2. For any product or manufacturer, which is not specifically named, submit Request for Substitution (RFS).
- C. For products indicated or specified by naming only one product and manufacturer, followed by the words "no substitution allowed", there is no option.

1.3 SUBSTITUTIONS

- A. No substitutions shall be allowed for District standard systems, products, and/or materials unless approved in writing from the Architect's office five (5) days prior to bid. The entire District Standard systems, products, and/or materials can be found on the District's website at:

<http://www.clpccd.org/facilities/DistrictStandardsandGuidelines-ChabotCollege.php>

- B. Within a period of thirty-five (35) days after Award of Contract, Construction Manager and Architect/Engineer will consider RFS from Contractor. After that period, requests will be considered only when product becomes unavailable due to no fault of Contractor. Requests for review of proposed substitute items will not be accepted from anyone other than Contractor. The RFS will state the extent, if any, to which the evaluation and acceptance of the proposed substitute will prejudice Contractor's achievement of substantial completion on time, whether or not acceptance of the substitute for use in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with CLPCCD for work on the Project).
- C. Submit separate RFS for each product and support each request with:
 - 1. Product identification
 - 2. Manufacturer's literature
 - 3. Samples, as applicable
 - 4. Name and address of similar projects on which product has been used, and date of installation
 - 5. Name, address and telephone number of manufacturer's representative or sales engineer
 - 6. Where DSA approval is required, product shall be reviewed and approved by DSA
- D. Itemize a comparison of the proposed substitution with product specified and list significant variations. If variation from product specified is not pointed out in submittal, variation will be rejected even though submittal was favorably reviewed.

- E. State whether the substitute will require a change in any of the Contract documents (or provisions of any other direct contract with CLPCCD for work on the Project) to adapt the design of the proposed substitute, and whether or not incorporation or use of the substitute in connection with Work is subject to payment of any license fee or royalty. Submit data relating to changes in construction schedule.
- F. All variations of the proposed substitute from that specified will be identified in the RFS and available maintenance, repair and replacement service will be indicated.
- G. Include accurate cost data comparing proposed substitution with product and amount of net change in Contract price, including but not limited to, an itemized estimate of all costs or credits that will result directly or indirectly from acceptance of such substitute, including costs of redesign and claims of other contractors effected by the resulting change, all of which will be considered by Construction Manager and Architect/Engineer in evaluating the proposed substitute. Construction Manager and Architect/Engineer may require Contractor to furnish additional data about the proposed substitute.
- H. Substitutions will not be considered for acceptance when:
 - 1. They will result in delay meeting construction milestones or completion dates.
 - 2. Substitution of products results in an increase in costs resulting in a additional cost change order to the District
 - 3. They are indicated or implied on submittals without formal request from Contractor.
 - 4. They are requested directly by subcontractor or supplier.
 - 5. Acceptance will require substantial revision of Contract Documents.
 - 6. They disrupt Contractor's job rhythm or ability to perform efficiently.
- I. Substitute products shall not be ordered without written acceptance of Construction Manager and Architect/Engineer.
- J. Construction Manager and Architect/Engineer will determine acceptability of proposed substitutions and reserve right to reject proposals due to insufficient information.
- K. Accepted substitutions will be evidenced by a change order or Supplemental Instruction. All Contract requirements apply to Work involving substitutions.

1.4 CONTRACTOR'S REPRESENTATION AND WARRANTY

- A. Requests constitute a representation and warranty that Contractor:
 - 1. Has investigated proposed product and determined that it meets or exceeds, in all respects, specified product
 - 2. Will provide the same warranty for substitution as for specified product
 - 3. Will coordinate installation and make other changes, which may be required for Work to be complete in all respects
 - 4. Waives claims for additional costs, which may subsequently become apparent
 - 5. Will compensate CLPCCD for additional redesign costs associated with substitution, if required
 - 6. Will be responsible for Construction Schedule slippage due to substitution
 - 7. Will be responsible for Construction Schedule delay due to late ordering of available specified products caused by requests for substitution, which is subsequently rejected by Construction Manager
 - 8. Will compensate CLPCCD for all costs; including extra costs of Contract, extra cost to other contractors, and any claims brought against CLPCCD, caused by late requests for substitutions or late ordering of products.

1.5 CONSTRUCTION MANAGER'S AND ARCHITECT/ENGINEER'S DUTIES

- A. Review Contractor's RFS within seven (7) working days.

- B. Notify Contractor in writing of decision to accept or reject requested substitution within seven (7) working days.

1.6 COST OF REVIEW

- A. Construction Manager and Engineer will record time required in evaluating substitutes proposed or submitted by Contractor. Whether or not Construction Manager or Architect/Engineer accepts the substitute item so proposed or submitted by Contractor, Contractor shall reimburse CLPCCD for the charges of Architect/Engineer and Construction Manager for evaluating each such proposed substitute item.
- B. The CLPCCD reserves the right to waive the requirement of paragraph A above.

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

- A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.
 - 1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
 - 2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
 - 3. Owner reserves the right to limit selection to products with warranties meeting requirements of the Contract Documents.
 - 4. Where products are accompanied by the term "as selected," Architect will make selection.
 - 5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
 - 6. Or Equal: For products specified by name and accompanied by the term "or equal," "or approved equal," or "or approved," or "or approved comparable product," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.
 - a. Submit additional documentation required by Architect through Construction Manager in order to establish equivalency of proposed products. Unless otherwise indicated, evaluation of "or equal" product status is by the Architect, whose determination is final.
- B. Product Selection Procedures: The following language is used in the specifications to indicate how products may be selected:
 - 1. Sole Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 - a. Sole product may be indicated by the phrase "Subject to compliance with requirements, provide the following."
 - 2. Sole Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 - a. Sole manufacturer/source may be indicated by the phrase "Subject to compliance with requirements, provide products by the following."
 - 3. Limited List of Products: Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.

- a. Limited list of products may be indicated by the phrase "Subject to compliance with requirements, provide one of the following."
 4. Non-Limited List of Products: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed or an unnamed product that complies with requirements.
 - a. Non-limited list of products is indicated by the phrase "Subject to compliance with requirements, available products that may be incorporated in the Work include, but are not limited to, the following."
 - b. Provision of an unnamed product is not considered a substitution, if the product complies with requirements.
 5. Limited List of Manufacturers: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.
 - a. Limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, provide products by one of the following."
 6. Non-Limited List of Manufacturers: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed or a product by an unnamed manufacturer that complies with requirements.
 - a. Non-limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, available manufacturers whose products may be incorporated in the Work include, but are not limited to, the following."
 - b. Provision of products of an unnamed manufacturer is not considered a substitution, if the product complies with requirements.
 7. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications may additionally indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.
 - a. For approval of products by unnamed manufacturers, comply with requirements in Section 012500 "Substitution Procedures" for substitutions for convenience.
 8. Reference Standards: Where Specifications describe a product by referring to a reference standard without listing product/manufacturer, propose a product that meets the standard. Where additional product description modifies the reference standard, propose a product that meets the standard as modified.
- C. Product Uniformity: It is the intent of the documents that the completed construction be uniform through-out the Project. For each type of product, the manufacturer and model shall not vary. After a particular product has been identified and approved for an application, that product shall be used for that application across all the subcontracts and other Work related contracts held by the Contractor. This provision applies equally to accepted substitutions.
- D. Visual Matching Specification: Where Specifications require the phrase "match Architect's sample," provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.
1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 012500 "Substitution Procedures" for proposal of product.
- E. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or a similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

- F. Sustainable Product Selection: Where Specifications require product to meet sustainable product characteristics, select products complying with indicated requirements. Comply with requirements in Division 01 sustainability requirements Section and individual Specification Sections.
1. Select products for which sustainable design documentation submittals are available from manufacturer.

2.2 COMPARABLE PRODUCTS

- A. Conditions for Consideration of Comparable Products: Architect will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with the following requirements:
1. Evidence that proposed product does not require revisions to the Contract Documents, is consistent with the Contract Documents, will produce the indicated results, and is compatible with other portions of the Work.
 2. Detailed comparison of significant qualities of proposed product with those of the named basis-of-design product. Significant product qualities include attributes, such as type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other specific features and requirements.
 3. Evidence that proposed product provides specified warranty.
 4. List of similar installations for completed projects, with project names and addresses and names and addresses of architects and owners, if requested.
 5. Samples, if requested.
 6. By proposing a product that is not listed, for consideration as a comparable product, the Contractor affirms that it meets requirements, except where clearly indicated otherwise. Approval, if granted, will be contingent upon the product meeting requirements as a comparable product. In the absence of clear indication of non-compliance in product submittal, approval of the comparable product by Architect will be based on Contractor's affirmation, whether explicit or implicit.
- B. Architect's Action on Comparable Products Submittal: If necessary, Architect will request additional information or documentation for evaluation within seven days of receipt of a request for a comparable product. Architect will notify Contractor through Construction Manager of approval or rejection of proposed comparable product within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
1. Architect's Approval of Submittal: Indication of approval in web-based Project management software. See Section 013300 "Submittal Procedures."
 2. Use product specified if Architect does not issue a decision on use of a comparable product request within time allocated.
- C. Submittal Requirements, Two-Step Process: Approval by the Architect of Contractor's request for use of comparable product is not intended to satisfy other submittal requirements. Comply with specified submittal requirements.

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 017000 - CONTRACT CLOSEOUT

PART 1 - GENERAL

1.1 SUMMARY

- A. This section describes contract closeout procedures including:
 - 1. Removal of temporary construction facilities
 - 2. Substantial completion
 - 3. Final completion
 - 4. Final cleaning
 - 5. Material, equipment and finish data
 - 6. Project guarantee
 - 7. Warranties
 - 8. Turn-in
 - 9. Release of claims
 - 10. Guaranty and Maintenance Bonds

- B. Related Requirements:
 - 1. Section 017800 - Project Record Documents

1.2 REMOVAL OF TEMPORARY CONSTRUCTION FACILITIES

- A. Remove temporary materials, equipment, services, and construction prior to Substantial Completion Inspection.
- B. Clean and repair damage caused by installation or use of temporary facilities.
- C. Restore permanent facilities used during construction to specified condition.

1.3 SUBSTANTIAL COMPLETION

- A. When Contractor considers Work or designated portion thereof as substantially complete, submit written notice, with list of items to be completed or corrected to Construction Manager.
- B. Within reasonable time, Construction Manager and Architect/Engineer will inspect to determine status of completion.
- C. Should Construction Manager or Architect/Engineer determine that Work is not substantially complete; Construction Manager will promptly notify Contractor in writing, listing all defects and omissions.
- D. Remedy deficiencies and send a second written notice of substantial completion. Architect/Engineer will reinspect the Work. If deficiencies previously noted are not corrected on reinspection, then Contractor shall pay the cost of the reinspection.
- E. When Architect/Engineer determines that Work is substantially complete, Construction Manager will issue a Certificate of Substantial Completion.
- F. Manufactured units, equipment and systems, which require startup, must have been started up and run for periods prescribed by Construction Manager, Architect/Engineer, or Owner before a Certificate of Substantial Completion will be issued.

1.4 FINAL COMPLETION

- A. When Contractor considers Work is complete, submit written certification that:

1. Contractor has inspected Work for compliance with Contract Documents.
2. Work, except for Contractor maintenance after Final Acceptance, has been completed in accordance with Contract Documents and deficiencies listed with Certificate of Substantial Completion have been corrected.
3. Work is complete and ready for final inspection.
4. Contractor has achieved all requirements for Final Acceptance as that term is defined in Section 014100 – Regulatory Requirements.
 - a. In addition to submittals required by conditions of Contract, provide submittals required by governing authorities and submit final statement of accounting giving total adjusted Contract Sum, previous payments, and sum remaining due.
 - b. When Architect/Engineer finds Work is acceptable and final submittal is complete, Construction Manager will issue final change order reflecting approved adjustments to Contract Sum not previously made by Change Order.

1.5 FINAL CLEANING

- A. Execute final cleaning prior to final inspection.
- B. Clean interior and exterior surfaces exposed to view; remove temporary labels, stains and foreign substances, polish transparent and glossy surfaces, vacuum carpeted and soft surfaces.
 1. Clean equipment and fixtures to a sanitary condition, clean or replace filters of mechanical equipment operated during construction, clean ducts, blowers and coils of units operated without filters during construction.
 2. Employ skilled workers for final cleaning.
 - a. Clean Site; mechanically sweep-paved areas.
 - b. Remove waste and surplus materials, rubbish, and construction facilities from Site.

1.6 PROJECT RECORD DOCUMENTS

- A. General: Refer to Section 017800 - Project Record Documents.

1.7 PROJECT GUARANTEE

- A. Neither recordation of final acceptance nor final certificate for neither payment nor provision of the Contract nor partial or entire use or occupancy of the Site by CLPCCD shall constitute acceptance of Work not done in accordance with Contract Documents nor relieve Contractor of liability in respect to express warranties or responsibility for faulty materials or workmanship.
- B. Requirements for Contractor's guarantee of completed Work are included in General Conditions, Article 1.09. Contractor shall guarantee Work done under Contract against failures, leaks or breaks or other unsatisfactory conditions due to defective equipment, materials or workmanship, and perform repair work or replacement required, at Contractor's sole expense, for period of 1 year from date of Final Acceptance, as required by paragraph 13.2 of General Conditions.
- C. CLPCCD may make repairs to defective Work as set forth in paragraph 12.6 of General Conditions, if, within 5 working days after mailing of written notice of defective work to Contractor or authorized agent, Contractor shall neglect to make or undertake with due diligence repairs; provided, however, that in case of leak or emergency where, in opinion of CLPCCD, delay would cause hazard to health or serious loss or damage, repairs may be made without notice being sent to Contractor, and Contractor shall pay cost thereof.
- D. If, after installation, operation or use of materials or equipment to be furnished under Contract proves to be unsatisfactory to Construction Manager, CLPCCD shall have right to operate and use materials or equipment until it can, without damage to CLPCCD, be taken out of service for correction or replacement. Period of use of defective materials or equipment pending correction or replacement shall in no way decrease guarantee period required for acceptable corrected or replaced items of materials or equipment.

- E. Nothing in this Section shall be construed to limit, relieve or release Contractor's, subcontractors' and equipment suppliers' liability to CLPCCD for damages sustained as result of latent defects in equipment caused by negligence of suppliers' agents, employees or subcontractors. Stated in another manner, warranty contained in the Contract Documents shall not amount to, nor shall it be deemed to be, waiver by CLPCCD of any rights or remedies (or time limits in which to enforce such rights or remedies) it may have for defective workmanship or defective materials under laws of this State pertaining to acts of negligence.

1.8 WARRANTIES AND BONDS

- A. Execute Contractor's submittals and assemble documents executed by subcontractors, suppliers, and manufacturers.
 - 1. Provide table of contents and assemble in 8-1/2 inches by 11 inches three-ring binder with durable plastic cover.
 - 2. Assemble in Specification Section order.
 - 3. Provide an electronic copy of all warranties on thumb drive in PDF format
 - a. Submit material prior to final application for payment.
- B. For equipment put into use with CLPCCD's permission during construction, submit within ten (10) working days after first operation.
- C. For items of Work delayed materially beyond Date of Substantial Completion, provide updated submittal within ten (10) working days after acceptance, listing date of acceptance as start of warranty period.
- D. Warranties are intended to protect CLPCCD against failure of work and against deficient, defective and faulty materials and workmanship, regardless of sources.
- E. Limitations: Warranties are not intended to cover failures, which result from the following:
- F. Unusual or abnormal phenomena of the elements
- G. Vandalism after substantial completion
- H. Insurrection or acts of aggression including war
- I. Related Damages and Losses: Remove and replace Work which is damaged as result of defective Work, or which must be removed and replaced to provide access for correction of warranted Work.
- J. Warranty Reinstatement: After correction of warranted Work, reinstate warranty for corrected Work to date of original warranty expiration or to a date not less than 365 days after corrected Work was done, whichever is later.
- K. Replacement Cost: Replace or restore failing warranted items without regard to anticipated useful service lives.
- L. Warranty Forms: Submit drafts to Construction Manager for approval prior to execution. Forms shall not detract from or confuse requirements or interpretations of Contract Documents.
- M. Warranty shall be countersigned by manufacturers.
- N. Where specified, warranty shall be countersigned by subcontractors and installers.
- O. Rejection of Warranties: CLPCCD reserves right to reject unsolicited and coincidental product warranties, which detract from or confuse requirements or interpretations of Contract Documents.

- P. Term of Warranties: For materials, equipment, systems and workmanship warranty period shall be two (2) years minimum from date of substantial completion of entire Work except where:
1. Detailed specifications for certain materials, equipment or systems require longer warranty periods.
 2. Materials, equipment or systems are put into beneficial use of CLPCCD prior to Substantial Completion as agreed to in writing by Construction Manager.
- Q. Warranty of Title: No material, supplies, or equipment for Work under Contract shall be purchased subject to any chattel mortgage, security agreement, or under a conditional sale or other agreement by which an interest therein or any part thereof is retained by seller or supplier. Contractor warrants good title to all material, supplies, and equipment installed or incorporated in Work and agrees upon completion of all work to deliver the Site, together with improvements and appurtenances constructed or placed thereon by Contractor, to CLPCCD free from any claim, liens, security interest, or charges, and further agrees that neither Contractor nor any person, firm, or corporation furnishing any materials or labor for any Work covered by Contract shall have right to lien upon the Site or improvement or appurtenances thereon. Nothing contained in this Paragraph, however, shall defeat or impair right of persons furnishing materials or labor under bond given by Contractor for their protection or any rights under law permitting persons to look to funds due Contractor in hands of CLPCCD.

1.9 TURN-IN

- A. Contract will not be closed out and final payment will not be made until all personnel Identification Media, vehicle permits and keys issued to Contractor during prosecution of Work are turned in to CLPCCD.

1.10 RELEASE OF CLAIMS

- A. Contract will not be closed out and final payment will not be made until Contract Agreement and Release of Any and All Claims, is completed and executed by Contractor and CLPCCD.

1.11 FIRE INSPECTION COORDINATION

- A. Contractor shall coordinate fire inspection and secure sufficient notice to CLPCCD to permit convenient scheduling.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 017329 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 DESCRIPTION

- A. Work Included: This Section establishes general requirements pertaining to cutting, fitting, and patching of the work required to:
1. Make the several parts fit properly.
 2. Uncover work to provide for installation, inspection, or both of ill-timed work.
 3. Remove and replace work not conforming to requirements of the Contract Documents.
 4. Remove and replace defective work.

1.2 QUALITY ASSURANCE

- A. Perform all cutting and patching in accordance with pertinent requirements of the specifications and in the event no such requirements are determined, in conformance with the Architect's written direction. In the absence of either of the previous, the work shall be completed as a minimum to industry standards for the given scope and project.
- B. In all cases, exercise extreme care in cutting operations and perform such operations under adequate supervision by competent mechanics skilled in the applicable trade. Openings shall be neatly cut and shall be kept as small as possible to avoid unnecessary damage. Careless and/or avoidable cutting damage, etc., will not be tolerated, and the Contractor will be held responsible for such avoidable or willful damage.
- C. All replacing, patching, and repairing of materials and surfaces cut or damaged in the execution of the work shall be performed by experienced mechanics of the several trades involved. Such replacing, repairing, and/or patching shall be done with the applicable materials, in such a manner that all surfaces so replaced, etc., will upon completion of the work, match the surrounding similar surfaces.

1.3 SUBMITTALS

- A. Request for the Architect's Consent:
1. Prior to cutting which affects structural safety, submit a written request to the Architect for permission to proceed with cutting.
 2. Should conditions of the work, or schedule, indicate a required change of materials or methods for cutting and patching, notify the Architect and secure his written permission prior to proceeding.
- B. Notices to the Architect:
1. Submit written notice to the Architect designating the time the work will be uncovered, therefore providing a time for the Architect's observation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. For replacement of work removed, use materials which comply with the pertinent Section of these specifications. If materials are not covered within these documents, products and methods shall be provided and installed to match existing conditions.

2.2 CUTTING AND PATCHING

- A. Employ skilled and experienced installer to perform cutting and patching.

- B. Submit written request in advance of cutting or altering elements, which affects:
 - 1. Structural integrity of element.
 - 2. Integrity of weather-exposed or moisture-resistant elements.
 - 3. Efficiency, maintenance, or safety of element.
 - 4. Visual qualities of sight-exposed elements.
- C. Execute cutting, fitting, and patching including excavation and fill, to complete Work, and to:
 - 1. Fit the several parts together, to integrate with other Work.
 - 2. Uncover Work to install or correct ill-timed work.
 - 3. Remove and replace defective and non-conforming Work.
 - 4. Remove samples of installed Work for testing.
 - 5. Provide openings in elements of Work for penetrations of mechanical and electrical Work.
- D. Execute work by methods, which will avoid damage to other Work, and provide proper surfaces to receive patching and finishing.
- E. Cut rigid materials using masonry saw or core drill.
- F. Restore Work with new products in accordance with requirements of Contract Document.
- G. Fit Work tight to pipes, sleeves, ducts, conduit, and other penetrations through surfaces.
- H. Maintain integrity of wall, ceiling, or floor construction; completely seal voids.
- I. Refinish surfaces to match adjacent finishes. For continuous surfaces, refinish to nearest intersection; for an assembly, refinish entire unit.
- J. Identify any hazardous substance or condition exposed during the Work to the Architect for decision or remedy.

PART 3 - EXECUTION

3.1 CONDITIONS

- A. Inspect existing conditions, including elements subject to movement or damage during cutting and patching.
- B. After uncovering the work, inspect conditions affecting installation of new work.

3.2 DISCREPANCIES

- A. If uncovered conditions are not as anticipated, immediately notify the Architect through the Construction Manager and secure needed directions.
- B. Do not proceed in areas of discrepancy until all such discrepancies have been fully resolved.

3.3 PREPARATION PRIOR TO CUTTING

- A. Provide all required protection including, but not necessarily limited to, shoring, bracing, and support to maintain structural integrity of the work.

3.4 PERFORMANCE

- A. Perform cutting and demolition by methods which will prevent damage to other portions of the work and will provide a proper surface to receive new installation or repair and new work. Perform fitting and adjustment of products to provide finished installation complying with the specified tolerance and finishes.

END OF SECTION

SECTION 017419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for the following:
 - 1. Recycling nonhazardous demolition and construction waste.
 - 2. Disposing of nonhazardous demolition and construction waste.
- B. In an effort to keep astemanagemtn and disposal requiements consistent for entire Project, rather than by individual Increment, reveiw and address issues as appliable to each Increment. Project closeout shall accumulate all data and submittals required to achieve approval.

1.2 DEFINITIONS

- A. Construction Waste: Building, structure, and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Demolition Waste: Building, structure, and site improvement materials resulting from demolition operations.
- C. Disposal: Removal of demolition or construction waste and subsequent salvage, sale, recycling, or deposit in landfill, incinerator acceptable to authorities having jurisdiction, or designated spoil areas on Owner's property.
- D. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.

1.3 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition and construction waste becomes property of Contractor.

1.4 ACTION SUBMITTALS

- A. Waste Management Plan: Submit plan within 7 days of date established for the Notice to Proceed.

1.5 INFORMATIONAL SUBMITTALS

- A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Use the LEED v4 Construction and Demolition Waste Calculator (can be downloaded here: <https://www.usgbc.org/resources/construction-and-demolition-waste-calculator>). Include the following information:
 - 1. Material Description, material type, and material waste stream.
 - 2. Generation point of waste.
 - 3. Total quantity of waste in tons.
 - 4. Quantity of diverted (salvaged, recycled) from landfills, in both estimated and actual volumes or weights.
 - 5. Quantity of sent to landfill, in either estimated volumes and actual volumes or weights
- B. Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.
- C. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.

- D. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
- E. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- F. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- G. LEED Submittal: Submit documentation to USGBC, signed by Contractor, tabulating total waste material, quantities diverted and means by which it is diverted, and statement that requirements for the credit have been met. Respond to questions and requests from USGBC regarding construction waste management and disposal until the USGBC has made its determination on the project's LEED certification application. Document correspondence with USGBC as informational submittals.
- H. Qualification Data: For waste management coordinator and refrigerant recovery technician.
- I. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.
- J. Refrigerant Recovery: Comply with requirements in Section 024100 "General Demolition Procedures" for refrigerant recovery submittals.

1.6 QUALITY ASSURANCE

- A. Waste Management Coordinator Qualifications: Experienced firm, or individual employed and assigned by General Contractor, with a record of successful waste management coordination of projects with similar requirements. Superintendent may serve as Waste Management Coordinator.
 - 1. Firm employs a LEED-Accredited Professional, certified by the USGBC, as waste management coordinator.
 - 2. Waste management coordinator may also serve as LEED coordinator.
- B. Regulatory Requirements: Comply with transportation and disposal regulations of authorities having jurisdiction.
- C. Waste Management Conference(s): Conduct conference(s) at Project site to comply with requirements in Section 013119 "Project Meetings." Review methods and procedures related to waste management including, but not limited to, the following:
 - 1. Review and discuss waste management plan including responsibilities of each contractor and waste management coordinator.
 - 2. Review requirements for documenting quantities of each type of waste and its disposition.
 - 3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
 - 4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
 - 5. Review waste management requirements for each trade.

1.7 WASTE MANAGEMENT PLAN

- A. General: Develop a waste management plan according to requirements in this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight or volume, but use same units of measure throughout waste management plan.

- B. Waste Identification: Indicate anticipated types and quantities of demolition site-clearing and construction waste generated by the Work. Use LEED v4 or v4.1 Construction and Demolition Waste Calculator. Include estimated quantities and assumptions for estimates.
- C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Use LEED v4 or v4.1 Construction and Demolition Waste Calculator. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
 - 1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work in compliance with Section 024116 "Structure Demolition."
 - 2. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
 - 3. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
 - 4. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location where materials separation will be performed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Achieve end-of-Project rates for salvage/recycling of 75 percent by weight of total nonhazardous solid waste generated by the Work. Practice efficient waste management in the use of materials in the course of the Work. Develop diverted materials system to include at least four material streams. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials.

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

- A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.
 - 1. Comply with operation, termination, and removal requirements in Section 015000 "Temporary Facilities."
- B. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.
 - 1. Distribute waste management plan to everyone concerned within 7 days of submittal return.
 - 2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.
- C. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged and recycled.
 - 2. Comply with Section 015000 "Temporary Facilities" for controlling dust and dirt, environmental protection, and noise control.

3.2 RECYCLING DEMOLITION AND CONSTRUCTION WASTE, GENERAL

- A. General: Recycle paper and beverage containers used by on-site workers.
- B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Contractor.
- C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.
- D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.
 - 1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.
 - a. Inspect containers and bins for contamination and remove contaminated materials if found.
 - 2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 - 3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
 - 4. Store components off the ground and protect from the weather.
 - 5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor as often as required to prevent overfilling bins.

3.3 RECYCLING DEMOLITION WASTE

- A. General: As applicable to each Increment.
- B. Asphalt Paving: Grind asphalt to maximum 1-1/2-inch size.
- C. Concrete: Remove reinforcement and other metals from concrete and sort with other metals.
 - 1. Pulverize concrete to maximum 1-1/2-inch size.
- D. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.
 - 1. Pulverize masonry to maximum 1-1/2-inch size.
 - 2. Clean and stack undamaged, whole masonry units on wood pallets.
- E. Wood Materials: Sort and stack members according to size, type, and length. Separate lumber, engineered wood products, panel products, and treated wood materials.
- F. Metals: Separate metals by type.
 - 1. Structural Steel: Stack members according to size, type of member, and length.
 - 2. Remove and dispose of bolts, nuts, washers, and other rough hardware.
- G. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location. Remove edge trim and sort with other metals. Remove and dispose of fasteners.
- H. Acoustical Ceiling Panels and Tile: Stack large clean pieces on wood pallets and store in a dry location.
- I. Metal Suspension System: Separate metal members, including trim and other metals from acoustical panels and tile, and sort with other metals.
- J. Carpet: Roll large pieces tightly after removing debris, trash, adhesive, and tack strips.

1. Store clean, dry carpet in a closed container or trailer provided by carpet reclamation agency or carpet recycler.
- K. Carpet Tile: Remove debris, trash, and adhesive.
 1. Stack tile on pallet and store clean, dry carpet in a closed container or trailer provided by carpet reclamation agency or carpet recycler.
- L. Piping: Reduce piping to straight lengths and store by material and size. Separate supports, hangers, valves, sprinklers, and other components by material and size.
- M. Conduit: Reduce conduit to straight lengths and store by material and size.
- N. Lamps: Separate lamps by type and store according to requirements in 40 CFR 273.

3.4 RECYCLING CONSTRUCTION WASTE

- A. General: As applicable to each Increment.
- B. Packaging:
 1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
 2. Polystyrene Packaging: Separate and bag materials.
 3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
 4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.
- C. Wood Materials:
 1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
 2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.
- D. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.
 1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.
 - a. Comply with requirements in Section 329300 "Plants" for use of clean ground gypsum board as inorganic soil amendment.
- E. Paint: Seal containers and store by type.

3.5 DISPOSAL OF WASTE

- A. General: Except for items or materials to be salvaged or recycled, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.
 1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Burning: Do not burn waste materials.

END OF SECTION 017419

SECTION 017800 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Administrative and procedural requirements for Project Record Documents.
- B. Project Record Documents required include:
 - 1. Marked-up copies of Drawings
 - 2. Marked-up copies of Shop Drawings
 - 3. Newly prepared Drawings
 - 4. Marked-up copies of Specifications, Addenda, Change Orders and CCDs
 - 5. Marked-up Product Data submittals
 - 6. Record Samples
 - 7. Field records for variable and concealed conditions
 - 8. Record information on Work that is recorded only schematically
 - 9. Maintenance forms for major equipment
 - 10. Comments to all required DSA documentation
 - 11. All approved change orders
- C. Specific Project Record Documents requirements that expand requirements of this Section are included in the individual Sections of Divisions 2 through 33.
- D. General Project closeout requirements are included in Section 017000:Contract Closeout.
- E. Maintenance of Documents and Samples:
 - 1. Store Project Record Documents and Samples in the field office apart from Contract Documents used for construction.
 - 2. Do not permit Project Record Documents to be used for construction purposes.
 - 3. Maintain Project Record Documents in good order and in a clean, dry, legible condition.
 - 4. Make Documents and Samples available at all times for inspection by District.
- F. District will provide one full size blue line set of the Drawings and one Project Manual for Contractor's use for recording as-built conditions.

1.2 PROJECT RECORD DRAWINGS

- A. Mark-up Procedure: During the construction period, maintain a set of blue line or black line prints of Contract Drawings and Shop Drawings for Project Record Documents purposes. Label each document (on first sheet or format page) "PROJECT RECORD" in 2-inch high printed letters. Keep record documents current as Project proceeds. Note: A reference by number to a Change Order, Supplemental Instructions, RFI, RFQ, RFP, Field Order or other such document is not acceptable as sufficient record information on any record document. Do not permanently conceal any Work until required information has been recorded.
 - 1. Mark these Drawings to indicate the actual installation where the installation varies appreciably from the installation shown originally. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later. Items required to be marked include but are not limited to:
 - a. Dimensional changes to the Drawings
 - b. Revisions to details shown on the Drawings
 - c. Depths of various elements of foundation in relation to main floor level or survey datum
 - d. Horizontal and vertical location of underground utilities and appurtenances referenced to permanent surface improvements

- e. Location of internal utilities and appurtenances concealed in construction referenced to visible and accessible features of structure
 - f. Locations of underground work, points of connection with existing utilities, changes in direction, valves, manholes, catch basins, capped stub outs, invert elevations, and similar items
 - g. Actual numbering of each electrical circuit
 - h. Field changes of dimension and detail
 - i. Revisions to routing of piping and conduits
 - j. Revisions to electrical circuitry
 - k. Actual equipment locations
 - l. Duct size and routing
 - m. Changes made by Change Order or Supplemental Instruction
 - n. Details not on original Contract Drawings
2. Mark completely and accurately Project Record Drawing prints of Contract Drawings or Shop Drawings, whichever is the most capable of showing actual physical conditions. Where Shop Drawings are marked, show cross-reference on Contract Drawings location.
 3. Mark Project Record Drawing sets with red, erasable colored pencil; use other colors to distinguish between changes for different categories of the Work at the same location.
 4. Mark important additional information that was either shown schematically or omitted from original Drawings.
 5. Note Supplemental Instructions numbers, alternate numbers, Change Order numbers, and similar identification.
 6. Responsibility for Mark-up: Where feasible, the individual or entity who obtained Project Record Drawing data, whether the individual or entity is the installer, Subcontractor, or similar entity, is required to prepare the mark-up on Project Record Drawings.
 - a. Accurately record information in an understandable and legible drawing technique.
 - b. Record data as soon as possible after it has been obtained. In the case of concealed installations, record and check the mark-up prior to concealment.
- B. Preparation of Record Drawings: Immediately prior to inspection for Certification of Substantial Completion, review completed marked-up Project Record Drawings with District and Architect/Engineer. When authorized, prepare a full set of corrected digital data files of Contract Drawings.
1. Prior to Substantial Completion of the Work, Architect will make available to Contractor originals of the Contract Drawings, in AutoCAD 2024, .DWG format, for use in recording information.
 - a. Architect will provide data file layer information. Record markups in separate layers.
 2. Incorporate changes and additional information previously marked on print sets. Erase, redraw, and add details and notations where applicable. Identify and date each Drawing: include the printed designation "PROJECT RECORD DRAWING" in a prominent location on each Drawing.
 3. Refer instances of uncertainty to District for resolution.
 4. Clearly indicate at each affected detail and other drawings a full description of changes made during construction, and the actual location of items as previously specified.
 5. "Cloud" all affected areas.
 6. Stamp each Record Drawing with the following information:
 - a. Project Record Document.
 - b. Prepared by: Contractor's name, permanent address.
 - c. Date prepared.
 - d. Contractor's signature.
 - e. District Contract Number.
 - f. DSA Application #
- C. Review of Documents: Before copying and distributing final documents, submit one plot of corrected Project Record Drawings and the original marked-up prints to the Architect/Engineer for review. When acceptable, the Architect/Engineer will initial and date each document, indicating acceptance of general scope of changes and additional information recorded, and of the quality of drafting.
1. Documents and the original marked-up prints will be returned to the Contractor for organizing into sets, printing, binding, and final submittal.

- D. Copies and Distribution: After completing the preparation of Project Record Drawings and final review by Architect, submit the the following to District for District's records, whether or not changes and additional information were recorded:
 - 1. One digital data file set in original drawing format,
 - 2. one full size blue-line or black-line plots of each Drawing set,
 - 3. one half size blue-line or black-line plots of each Drawing set,
 - 4. and the marked-up Project Record Drawings set.
- E. Organize the copies into manageable sets. Bind each set with durable paper cover sheets, with appropriate identification, including titles, dates and other information on cover sheets.
 - 1. Organize and bind original marked-up set of prints that were maintained during the construction period in the same manner.
 - 2. Organize Project Record Drawings into sets matching the print sets. Place these sets in durable tube-type drawing containers with end caps. Mark the end cap of each container with suitable identification.
- F. Shop Drawings and Samples: Maintain as record documents; legibly annotate Shop Drawings and Samples to record changes made after review.
- G. In addition to requirements of this Section, comply with supplemental requirements of Divisions 21 through 28, as applicable.
 - 1. Divisions 21 though 28 of the Specifications may require the preparation of large scale, detailed layout drawings of the Work of those Divisions. These layout drawings are not Shop Drawings as defined by General Conditions, but together with Shop Drawings or layout drawings of all other affected Sections are used to check, coordinate, and integrate the work of the various Sections.
 - 2. Include these layout drawings as part of the Project Record Documents.

1.3 PROJECT RECORD SPECIFICATIONS

- A. During the construction period, maintain one copy of the Project Specifications, including addenda and modifications issued, for Project Record Documents purposes.
 - 1. Mark the Project Record Specifications to indicate the actual installation where the installation varies substantially from that indicated in Specifications and Modifications issued. Note related Project Record Drawing information, where applicable. Give particular attention to substitutions, selection of product options, Change Order and Supplemental Instruction work, and information on concealed installation that would be difficult to identify or measure and record later.
 - a. In each Specification Section where products, materials or units of equipment are specified or scheduled, mark the copy with the proprietary name and model number of the product furnished.
 - b. Record the name of the manufacturer, catalog number, supplier and installer, and other information necessary to provide a record of selections made and to document coordination with Project Record Product Data submittals and maintenance manuals.
 - c. Note related Project Record Product Data, where applicable, for each principal product specified, indicate whether Project Record Product Data has been submitted in maintenance manual instead of submitted as Project Record Product Data.
 - 2. Upon completion of mark-up, submit Project Record Specifications to District for District's records.
 - a. Submit Project Record Specifications as annotated PDF electronic file on compact disc (CD or DVD), and one paper copy.

1.4 PROJECT RECORD PRODUCT DATA

- A. During the construction period, maintain one copy of each Project Record Product Data submittal for Project Record Document purposes.

1. Mark Project Record Product Data to indicate the actual product installation where the installation varies substantially from that indicated in Project Record Product Data submitted. Include significant changes in the product delivered to the Site, and changes in manufacturer's instructions and recommendations for installation.
2. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
3. Note related Change Orders and mark-up of Project Record Drawings, where applicable.
4. Upon completion of mark-up, submit a complete set of Project Record Product Data to District for District's records.
5. Where Project Record Product Data is required as part of maintenance manuals, submit marked-up Project Record Product Data as an insert in the manual, instead of submittal as Project Record Product Data.
6. Contractor is responsible for mark-up and submittal of Project Record Product Data for its own Work.
7. Upon completion of mark-up, submit Project Record Product Data to District for District's records.
 - a. Submit Project Record Product Data as annotated PDF electronic file on compact disc (CD or DVD), and one paper copy.

1.5 MATERIAL, EQUIPMENT AND FINISH DATA

- A. Provide data for primary materials, equipment and finishes as required under each Specification Section.
- B. Submit three (3) hard copy sets and one annotated (1) digital copy, on compact disc (CD or DVD) prior to final inspection, bound in 8-1/2 inches by 11 inches three-ring binders with durable plastic covers; provide typewritten table of contents for each volume.
- C. Arrange by Specification Section number and give names, addresses, and telephone numbers of Subcontractors and suppliers. List:
 1. Trade names.
 2. Model or type numbers.
 3. Assembly diagrams.
 4. Operating instructions.
 5. Cleaning instructions.
 6. Maintenance instructions.
 7. Recommended spare parts.
 8. Product data.

1.6 MISCELLANEOUS PROJECT RECORD SUBMITTALS

- A. Refer to other Specification Sections for miscellaneous record keeping requirements and submittals in connection with various construction activities. Immediately prior to Substantial Completion, complete miscellaneous records and place in good order, properly identified and bound or filed, ready for use and reference. Submit to the District for District's records. Categories of requirements resulting in miscellaneous records include, but are not limited to, the following:
 1. Field records on excavations and foundations
 2. Field records on underground construction and similar work
 3. Survey showing locations and elevations of underground lines
 4. Invert elevations of drainage piping
 5. Surveys establishing building lines and levels
 6. Authorized measurements utilizing unit prices or allowances
 7. Records of plant treatment
 8. Ambient and substrate condition tests
 9. Certifications received in lieu of labels on bulk products
 10. Batch mixing and bulk delivery records
 11. Testing and qualification of tradespersons
 12. Documented qualification of installation firms
 13. Load and performance testing

14. Inspections and certifications by governing authorities
15. Leakage and water-penetration tests
16. Fire resistance and flame spread test results
17. Final inspection and correction procedures
18. Final As-Built Construction Schedule

1.7 ADDITIONAL REQUIREMENTS FOR FINAL PROJECT RECORD DOCUMENTS

- A. Stamp each Record Document with the following information:
 1. Project Record Document.
 2. Prepared by: Contractor's name, permanent address.
 3. Date prepared.
 4. Contractor's signature.
 5. District Contract Number.
 6. DSA Application #
- B. For electronic files:
 1. Do not check the "read only" option
 2. Do not password protect any files

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 RECORDING

- A. Post changes and modifications to the Contract Documents as they occur. Do not wait until the end of the Project. District may periodically review Project Record Documents to assure compliance with this requirement.

3.2 SUBMITTAL

- A. At completion of Project, deliver Project Record Documents to District.
- B. Accompany submittal with transmittal letter containing:
 1. Date
 2. Project title and number
 3. Contractor's name and address
 4. Number and title of each Project Record Document
 5. Certification that each document as submitted is complete and accurate, and signature of Contractor or Contractor's authorized representative.

END OF SECTION

SECTION 017823 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
 - 1. Operation and maintenance documentation directory manuals.
 - 2. Emergency manuals.
 - 3. Systems and equipment operation manuals.
 - 4. Systems and equipment maintenance manuals.
 - 5. Product maintenance manuals.
- B. Related Requirements:
 - 1. Section 013300 "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.

1.2 DEFINITIONS

- A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.
- B. Subsystem: A portion of a system with characteristics similar to a system.

1.3 CLOSEOUT SUBMITTALS

- A. Submit operation and maintenance manuals indicated. Provide content for each manual as specified in individual Specification Sections, and as reviewed and approved at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.
 - 1. Architect and Commissioning Authority will comment on whether content of operation and maintenance submittals is acceptable.
 - 2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.
- B. Format: Submit operation and maintenance manuals in the following format:
 - 1. Submit by uploading to web-based project software site. Enable reviewer comments on draft submittals.
 - 2. Submit three paper copies. Architect will return two copies.
- C. Initial Manual Submittal: Submit draft copy of each manual at least 30 days before commencing demonstration and training. Architect and Commissioning Authority will comment on whether general scope and content of manual are acceptable.
- D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect and Commissioning Authority will return copy with comments.
 - 1. Correct or revise each manual to comply with Architect's and Commissioning Authority's comments. Submit copies of each corrected manual within 15 days of receipt of Architect's and Commissioning Authority's comments and prior to commencing demonstration and training.
- E. Submit operation and maintenance documentation a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion.

1.4 FORMAT OF OPERATION AND MAINTENANCE MANUALS

- A. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.
1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
 2. File Names and Bookmarks: Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.
- B. Manuals, Paper Copy: Submit manuals in the form of hard-copy, bound and labeled volumes.
1. Binders: Heavy-duty, three-ring, vinyl-covered, post-type binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.
 - a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
 - b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents, and indicate Specification Section number on bottom of spine. Indicate volume number for multiple-volume sets.
 2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section of the manual. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.
 3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software storage media for computerized electronic equipment. Enclose title pages and directories in clear plastic sleeves.
 4. Supplementary Text: Prepared on 8-1/2-by-11-inch white bond paper.
 5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.
 - a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.
 - b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

1.5 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

- A. Organization of Manuals: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
1. Title page.
 2. Table of contents.
 3. Manual contents.
- B. Title Page: Include the following information:
1. Subject matter included in manual.
 2. Name and address of Project.
 3. Name and address of Owner.
 4. Date of submittal.

5. Name and contact information for Contractor.
 6. Name and contact information for Construction Manager.
 7. Name and contact information for Architect.
 8. Name and contact information for Commissioning Authority.
 9. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
 10. Cross-reference to related systems in other operation and maintenance manuals.
- C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.
- D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
- E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation in accordance with to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.6 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY MANUAL

- A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals. List items and their location to facilitate ready access to desired information. Include the following:
1. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
 2. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
 3. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

1.7 EMERGENCY MANUALS

- A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- B. Content: Organize manual into a separate section for each of the following:
1. Type of emergency.
 2. Emergency instructions.
 3. Emergency procedures.
- C. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
1. Fire.
 2. Flood.
 3. Gas leak.
 4. Water leak.
 5. Power failure.
 6. Water outage.
 7. System, subsystem, or equipment failure.
 8. Chemical release or spill.

- D. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.
- E. Emergency Procedures: Include the following, as applicable:
 - 1. Instructions on stopping.
 - 2. Shutdown instructions for each type of emergency.
 - 3. Operating instructions for conditions outside normal operating limits.
 - 4. Required sequences for electric or electronic systems.
 - 5. Special operating instructions and procedures.

1.8 SYSTEMS AND EQUIPMENT OPERATION MANUALS

- A. Systems and Equipment Operation Manual: Assemble a complete set of data indicating operation of each system, subsystem, and piece of equipment not part of a system. Include information required for daily operation and management, operating standards, and routine and special operating procedures.
 - 1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
 - 2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- B. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:
 - 1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
 - 2. Performance and design criteria if Contractor has delegated design responsibility.
 - 3. Operating standards.
 - 4. Operating procedures.
 - 5. Operating logs.
 - 6. Wiring diagrams.
 - 7. Control diagrams.
 - 8. Piped system diagrams.
 - 9. Precautions against improper use.
 - 10. License requirements including inspection and renewal dates.
- C. Descriptions: Include the following:
 - 1. Product name and model number. Use designations for products indicated on Contract Documents.
 - 2. Manufacturer's name.
 - 3. Equipment identification with serial number of each component.
 - 4. Equipment function.
 - 5. Operating characteristics.
 - 6. Limiting conditions.
 - 7. Performance curves.
 - 8. Engineering data and tests.
 - 9. Complete nomenclature and number of replacement parts.
- D. Operating Procedures: Include the following, as applicable:
 - 1. Startup procedures.
 - 2. Equipment or system break-in procedures.
 - 3. Routine and normal operating instructions.
 - 4. Regulation and control procedures.
 - 5. Instructions on stopping.
 - 6. Normal shutdown instructions.
 - 7. Seasonal and weekend operating instructions.
 - 8. Required sequences for electric or electronic systems.

9. Special operating instructions and procedures.

E. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

F. Piped Systems: Diagram piping as installed, and identify color coding where required for identification.

1.9 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Systems and Equipment Maintenance Manuals: Assemble a complete set of data indicating maintenance of each system, subsystem, and piece of equipment not part of a system. Include manufacturers' maintenance documentation, preventive maintenance procedures and frequency, repair procedures, wiring and systems diagrams, lists of spare parts, and warranty information.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

B. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranties and bonds as described below.

C. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:

1. Standard maintenance instructions and bulletins; include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
 - a. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

E. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. Demonstration and training video recording, if available.

F. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
 2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.
- G. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.
- H. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.
- I. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
1. Include procedures to follow and required notifications for warranty claims.
- J. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.
1. Do not use original project record documents as part of maintenance manuals.

1.10 PRODUCT MAINTENANCE MANUALS

- A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- B. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.
- C. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.
- D. Product Information: Include the following, as applicable:
1. Product name and model number.
 2. Manufacturer's name.
 3. Color, pattern, and texture.
 4. Material and chemical composition.
 5. Reordering information for specially manufactured products.
- E. Maintenance Procedures: Include manufacturer's written recommendations and the following:
1. Inspection procedures.
 2. Types of cleaning agents to be used and methods of cleaning.
 3. List of cleaning agents and methods of cleaning detrimental to product.
 4. Schedule for routine cleaning and maintenance.
 5. Repair instructions.
- F. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.
- G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
1. Include procedures to follow and required notifications for warranty claims.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017823

SECTION 017900 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:
 - 1. Instruction in operation and maintenance of systems, subsystems, and equipment.
 - 2. Demonstration and training video recordings.

1.2 INFORMATIONAL SUBMITTALS

- A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
 - 1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.
- B. Qualification Data: For facilitator, instructor and videographer.
- C. Attendance Record: For each training module, submit list of participants and length of instruction time.
- D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.3 CLOSEOUT SUBMITTALS

- A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.
 - 1. Identification: On each copy, provide an applied label with the following information:
 - a. Name of Project.
 - b. Name and address of videographer.
 - c. Name of Architect.
 - d. Name of Construction Manager.
 - e. Name of Contractor.
 - f. Date of video recording.
 - 2. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
 - 3. At completion of training, submit complete training manual(s) for Owner's use prepared in same PDF file format required for operation and maintenance manuals specified in Section 017823 "Operation and Maintenance Data."

1.4 QUALITY ASSURANCE

- A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
- B. Instructor Qualifications: A factory-authorized service representative, experienced in operation and maintenance procedures and training.

- C. Videographer Qualifications: A professional videographer who is experienced photographing demonstration and training events similar to those required.
- D. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Section 013119 "Project Meetings." Review methods and procedures related to demonstration and training including, but not limited to, the following:
 - 1. Inspect and discuss locations and other facilities required for instruction.
 - 2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
 - 3. Review required content of instruction.
 - 4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.5 COORDINATION

- A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
- C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data have been reviewed and approved by Architect.

1.6 INSTRUCTION PROGRAM

- A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.
- B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:
 - 1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
 - a. System, subsystem, and equipment descriptions.
 - b. Performance and design criteria if Contractor is delegated design responsibility.
 - c. Operating standards.
 - d. Regulatory requirements.
 - e. Equipment function.
 - f. Operating characteristics.
 - g. Limiting conditions.
 - h. Performance curves.
 - 2. Documentation: Review the following items in detail:
 - a. Emergency manuals.
 - b. Systems and equipment operation manuals.
 - c. Systems and equipment maintenance manuals.
 - d. Product maintenance manuals.
 - e. Project Record Documents.
 - f. Identification systems.
 - g. Warranties and bonds.
 - h. Maintenance service agreements and similar continuing commitments.
 - 3. Emergencies: Include the following, as applicable:
 - a. Instructions on meaning of warnings, trouble indications, and error messages.
 - b. Instructions on stopping.

- c. Shutdown instructions for each type of emergency.
 - d. Operating instructions for conditions outside of normal operating limits.
 - e. Sequences for electric or electronic systems.
 - f. Special operating instructions and procedures.
4. Operations: Include the following, as applicable:
- a. Startup procedures.
 - b. Equipment or system break-in procedures.
 - c. Routine and normal operating instructions.
 - d. Regulation and control procedures.
 - e. Control sequences.
 - f. Safety procedures.
 - g. Instructions on stopping.
 - h. Normal shutdown instructions.
 - i. Operating procedures for emergencies.
 - j. Operating procedures for system, subsystem, or equipment failure.
 - k. Seasonal and weekend operating instructions.
 - l. Required sequences for electric or electronic systems.
 - m. Special operating instructions and procedures.
5. Adjustments: Include the following:
- a. Alignments.
 - b. Checking adjustments.
 - c. Noise and vibration adjustments.
 - d. Economy and efficiency adjustments.
6. Troubleshooting: Include the following:
- a. Diagnostic instructions.
 - b. Test and inspection procedures.
7. Maintenance: Include the following:
- a. Inspection procedures.
 - b. Types of cleaning agents to be used and methods of cleaning.
 - c. List of cleaning agents and methods of cleaning detrimental to product.
 - d. Procedures for routine cleaning.
 - e. Procedures for preventive maintenance.
 - f. Procedures for routine maintenance.
 - g. Instruction on use of special tools.
8. Repairs: Include the following:
- a. Diagnosis instructions.
 - b. Repair instructions.
 - c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 - d. Instructions for identifying parts and components.
 - e. Review of spare parts needed for operation and maintenance.

1.7 PREPARATION

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 "Operation and Maintenance Data."
- B. Set up instructional equipment at instruction location.

1.8 INSTRUCTION

- A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.

- B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
 - 1. Owner will furnish Contractor with names and positions of participants.
- C. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.
 - 1. Schedule training with Owner, through Construction Manager, with at least seven days' advance notice.
- D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.
- E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a demonstration performance-based test.
- F. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

1.9 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

- A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.
 - 1. At beginning of each training module, record each chart containing learning objective and lesson outline.
- B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full HD mode with vibration reduction technology.
 - 1. Submit video recordings by uploading to web-based Project software site.
 - 2. File Hierarchy: Organize folder structure and file locations in accordance with Project Manual table of contents. Provide complete screen-based menu.
 - 3. File Names: Utilize file names based on name of equipment generally described in video segment, as identified in Project specifications.
 - 4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the equipment demonstration and training recording that describes the following for each Contractor involved on the Project, arranged in accordance with Project Manual table of contents:
 - a. Name of Contractor/Installer.
 - b. Business address.
 - c. Business phone number.
 - d. Point of contact.
 - e. Email address.
- C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.
 - 1. Film training session(s) in segments not to exceed 15 minutes.
 - a. Produce segments to present a single significant piece of equipment per segment.
 - b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
 - c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.

- D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.
 - 1. Furnish additional portable lighting as required.

- E. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017900

SECTION 018113.15 - SUSTAINABLE DESIGN REQUIREMENTS - LEED v4 BD+C

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes general requirements and procedures for compliance with certain prerequisites and credits needed for Project to obtain minimum "LEED Version 4.0 for New Construction" (LEED v4.0 NC) **Silver** certification based on USGBC's LEED v4 BD+C.
1. Specific requirements for LEED are also included in other Sections.
 2. Some LEED prerequisites and credits needed to obtain LEED certification depend on product selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
 3. A copy of the LEED Project checklist (credit scorecard) is attached at the end of this Section for information only.
 - a. Some LEED prerequisites and credits needed to obtain the indicated LEED certification depend on aspects of Project that are not part of the Work of the Contract.
 4. Definitions included in the "LEED Version 4.0 for Building Design and Construction" (LEED v4.0 BD+C) Reference Guide and online amendments apply to this Section.
- B. Note: The pursuit of LEED certification and its procedures and requirements identified in this Section apply to building B1500 new construction only, including submittals. Sustainable design requirements indicated in the individual Sections apply to all new construction and alterations, though submittals are not required for building B1800.
- C. Related Requirements:
1. Section 013233, "Photographic Documentation."
 2. Section 013300, "Submittal Procedures."
 3. Section 017419, "Construction Waste Management and Disposal."
 4. Section 017823, "Operation and Maintenance Data."
 5. Section 018113.71 "CALGreen Non-Residential Mandatory Measures."
 6. Divisions 02 through 33 Sections for Sustainable Design requirements specific to the work of each of these Sections. Requirements may or may not include reference to LEED.
- D. In an effort to keep LEED sustainability requirements consistent for entire Project, rather than by individual Increment, review and address issues as applicable to each Increment. Project closeout shall accumulate all data and submittals required to achieve certification.
- E. Coordinate requirements of this Section with requirements for CALGreen environmental requirements indicated in Section 018113.71. Notify Architect of any discrepancies or conflicts.

1.2 DEFINITIONS

- A. **Bio-Based Materials:** Materials that meet the Sustainable Agriculture Network's Sustainable Agriculture Standard. Bio-based raw materials shall be tested using ASTM D 6866 and be legally harvested, as defined by the exporting and receiving country.
- B. **CDPH Standard Method v1.1:** California Department of Public Health (CDPH) Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, v. 1.1-2010, for the emissions testing and requirements of products and materials.
- C. **Chain-of-Custody (COC):** A procedure that tracks a product from the point of harvest or extraction to its end use, including all successive stage of processing, transformation, manufacturing, a distribution.

- D. Chain-of-Custody Certificates: Certificates signed by manufacturers and fabricators certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001.
- E. Composite Wood and Agrifiber: Products made of wood particles and/or plant material pressed and bonded with adhesive or resin such as particleboard, medium density fiberboard (MDF), plywood, wheatboard, strawboard, panel substrates, and door cores.
- F. Corporate Sustainability Report: A third-party verified report that outlines the environmental impacts of extraction operations and activities associated with the manufacturer's product and the product's supply chain.
- G. Environmental Product Declaration (EPD): An independently verified report based on life-cycle assessment studies that have been conducted according to a set of common rules for each product category and peer-reviewed.
 - 1. Product-Specific Declaration: A product with a publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that has at least a cradle to gate scope.
 - 2. Industry-Wide (Generic) EPD: Provide products with third-party certification (Type III), including external verification, in which the manufacturer is explicitly recognized as a participant by the program operator. EPD must conform to ISO 14025, 14040, 14044, and EN 15804 or ISO 21930 and have at least a cradle to gate scope.
 - 3. Product-Specific Type III EPD: A product with a third-party certification, including external verification, in which the manufacturer is explicated recognized by the program operator. EPD must conform to ISO 14025, 14040, 14044, and EN 15804 or ISO 21930 and have at least a cradle to gate scope.
- H. Extended Producer Responsibility (EPR): Measures undertaken by the maker of a product to accept its own and sometimes other manufacturers' products as postconsumer waste at the end of the products' useful life.
- I. Health Product Declaration Open Standard (HPD): A standard format for reporting product content and associated health information for building products and materials.
- J. Indoor Air Quality (IAQ) Management Plan: Plan developed by the Contractor to provide a healthy indoor environment for workers and building occupants during construction. Plan must meet or exceed the recommendations of the Sheet Metal and Air Conditioning Contractors National Association (SMACNA) "IAQ Guidelines for Occupied Buildings Under Construction, 2nd edition, 2007, ANSI/SMACNA 008-2008, Chapter 3."
- K. Leadership Extraction Practices: Products that meet at least one of the responsible extraction criteria, which include: extended producer responsibility; bio-based materials; FSC wood products; materials reuse; recycled content; and other USGBC approved programs.
- L. Material Cost: The dollar value of materials being provided to the site, after Contractor mark-ups, including transportation costs, taxes, fees, and shop labor, but excluding field equipment and field labor costs.
- M. Materials Reuse: Reuse includes salvaged, refurbished, or reused products.
- N. Multi-Attribute Optimization: Third party certified products that demonstrate impact reduction below industry average in at least three of the following six categories: global warming potential; stratospheric ozone depletion; acidification; eutrophication; tropospheric ozone creation; nonrenewable resource depletion.
- O. Recycled Content: Recycled content is the sum of postconsumer recycled content plus one-half the preconsumer recycled content, based on cost.

1. "Postconsumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.
 2. "Preconsumer" material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials, such as rework, regrind, or scrap, generated in a process and capable of being reclaimed within the same process that generated it.
- P. Regional Materials: Materials that are extracted, harvested, recovered, and manufactured within a radius of 100 miles from the Project site.
- Q. Volatile Organic Compounds (VOC) Emissions Test: Refer to CDPH Standard Method v1.1 definition.

1.3 ADMINISTRATIVE REQUIREMENTS

- A. Work of this project includes completed building and application for LEED certification. Work is not complete until District has accepted USGBC's final review of LEED certification.
1. Provide documentation required by LEED and LEED review.
- B. Provide materials and procedures necessary to obtain LEED prerequisites and credits required in this Section. Other Sections may specify requirements that contribute to LEED prerequisites and credits. Refer to other sections for additional materials and procedures necessary to obtain LEED prerequisites and credits.
- C. Respond to questions and requests for additional information from Architect and the USGBC regarding LEED credits until the USGBC has made its determination on the project's LEED certification application.
- D. LEED Online Submittals: Upload LEED documentation submittal data directly to USGBC project "LEED Online" website. Complete online forms at least monthly and as necessary to document LEED credits for submittals required in this Section.
- E. LEED Conference: Schedule and conduct a conference at a time convenient to District and Architect within 30 days prior to commencement of the work. Advise Architect, District's Commissioning Authority of scheduled meeting dates.
1. Attendees: Authorized representatives of District, District's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 2. Agenda: LEED goals for the project, Contractor's action plans, and discussion of targeted LEED Prerequisites and Credits.
 3. Minutes: Record and distribute minutes to attendees and other entities with responsibilities for obtaining LEED Credits.

1.4 ACTION SUBMITTALS

- A. General: Submit additional LEED submittals required by other Specification Sections.
1. Submit each LEED submittal simultaneously with applicable product submittal.
- B. LEED Documentation Submittals:
1. General, LEED v4/v4.1 Product Sustainable Attribute Form: Project submittals must be accompanied by a completed LEED v4/v4.1 Product Sustainable Attribute Form. Submittal packages must also include highlighted documentation supporting the sustainability claims made on the LEED v4/v4.1 Product Sustainable Attribute Form.
 - a. Provide location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material.

2. EAp3, Building-Level Energy Metering: Product data for meters, sensors, and data collection system used to provide continuous metering of building energy-consumption performance.
3. MRp2/MRc5, Construction and Demolition Waste Management: Comply with submittal requirements of Section 017419 "Construction Waste Management and Disposal."
4. MRc2, Building Product Disclosure and Optimization: Environmental Product Declarations complying with LEED requirements.
5. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials: *Option 1*, Raw Material Source and Extraction Reporting.
 - a. Corporate sustainability reports for products that comply with LEED requirements for raw material and source extraction reporting.
6. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials: *Option 2*, Leadership Extraction Practices.
 - a. Extended Producer Responsibility: Product data and certification letter from product manufacturers, indicating participation in an extended producer responsibility program and statement of costs.
 - b. Bio-Based Materials: Product data and certification for bio-based materials, indicating that they comply with requirements. Include statement of costs.
 - c. Certified Wood: Product data and chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each certified wood product.
 - d. Materials Reuse: Receipts for salvaged and refurbished materials used for Project, indicating sources and costs.
 - e. Recycled Content: Product data and certification letter from product manufacturers, indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement of costs.
7. MRc4, Building Product Disclosure and Optimization, Material Ingredients: *Option 1*, Material Ingredient Reporting.
 - a. Material ingredient reports for products that comply with LEED requirements for material ingredient reporting, including but not limited to the following:
 - 1) Manufacturer Inventory.
 - 2) Health Product Declaration.
 - 3) Cradle to Cradle certifications.
 - 4) Declare product labels.
 - 5) ANSI/BIFMA e3 Furniture Sustainability Standard.
8. MRc4, Building Product Disclosure and Optimization, Material Ingredients: *Option 2*, Material Ingredient Optimization.
 - a. Documentation for products that comply with LEED requirements for material ingredient optimization, including but not limited to the following:
 - 1) GreenScreen Benchmarks.
 - 2) Cradle to Cradle certifications.
 - 3) REACH optimizations.
9. EQc3, Construction Indoor Air Quality Management:
 - a. Construction indoor-air-quality (IAQ) management plan. (See Paragraph 3.3.A)
 - b. Product data for temporary filtration media.
 - c. Product data for filtration media used during occupancy.
 - d. Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the IAQ management measures, such as protection of ducts and on-site stored or installed absorptive materials.
10. EQc2, Low-Emitting Materials: Product data, indicating VOC content and emissions testing documents showing compliance with requirements for low-emitting materials, for the following materials:
 - a. Paints and coatings.
 - b. Adhesives and sealants.

- c. Flooring.
- d. Products containing composite wood or agrifiber products or wood glues.
- e. Ceilings, walls, thermal, and acoustic insulation.
- f. Exterior applied materials.
- g. Furniture.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For LEED coordinator.
- B. Project Materials Cost Data: Provide statement indicating total cost and shop labor for materials used for Project. Costs exclude site labor, overhead, and profit. Include breakout of costs for the following categories of items:
 1. Wood construction materials.
 2. Furniture.
 3. Passive plumbing materials.
 4. Passive mechanical (HVAC) materials.
 5. Passive electrical materials.
 6. Earthwork and exterior improvements, hard costs.
- C. LEED Building Disclosure and Optimization (BPDO) Credit Action Plans: Provide preliminary submittals within 30 days of date established for the Notice to Proceed indicating how the following requirements will be met:
 1. General
 - a. The LEED-NC v4.1 credits can be used as the basis for all BPDO credits.
 - b. Use the LEED-NC v4.1 BPDO calculator to complete all BPDO Action Plans. A copy of the calculator is available at: <https://www.usgbc.org/resources/leed-v41-bpdo-calculator>.
 - c. These electronic forms shall be provided by the Architect at the beginning of the Construction Phase and reviewed in the Preconstruction Conference.
 2. MRc2 - Building Disclosure and Optimization - EPD; Option 1. List at least 20 different permanently installed products sourced from at least five different manufacturers that the Contractor intends to procure that meet the Life-Cycle Assessment or Environmental Product Declarations complying with the requirements listed in LEED v4.1 for Credit MRc2 Option 1
 3. MRc2 - Building Disclosure and Optimization - EPD; Option 2. List the products that the Contractor intends to procure representing at least 10% of the cost of the total value of permanently installed products in the project, or at least 5 permanently installed products sourced from at least three different manufacturers that meet the Life-Cycle Impact Reduction Action Plan requirements or the Life Cycle Impact Reductions in Embodied Carbon requirements listed in LEED v4.1 for Credit MRc2 Option 2.
 4. MRc3 - Building Disclosure and Optimization - Sourcing of Raw Materials; *Option 1*. List the products that the Contractor intends to procure representing at least 15% of the cost of the total value of permanently installed products in the project, sourced from at least three different manufacturers that meet at least one of the responsible sourcing and extraction criteria listed in LEED v4.1 for Credit MRc3.
 5. MRc3 - Building Disclosure and Optimization - Sourcing of Raw Materials; *Option 2*. List the products that the Contractor intends to procure representing at least 30% of the cost of the total value of permanently installed products in the project, sourced from at least five different manufacturers that meet at least one of the responsible sourcing and extraction criteria listed in LEED v4.1 for Credit MRc3.
 6. MRc4 - Building Disclosure and Optimization - Materials Ingredients; Option 1. List at least 20 different permanently installed products sourced from at least five different manufacturers that the Contractor intends to procure that use any of the programs listed in LEED v4.1 for Credit MRc4 Option 1 to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm)

7. MRc4 - Building Disclosure and Optimization - Materials Ingredients; Option 2. List the products that the Contractor intends to procure representing at least 10% of the cost of the total value of permanently installed products in the project, or at least 5 permanently installed products sourced from at least three different manufacturers for which the manufacturer documents material ingredient optimization using the paths listed in LEED v4.1 for Credit MRc4 Option 2.
- D. LEED Credit Action Plan: Provide preliminary submittals within 7 days of date established for the Notice to Proceed indicating how the following requirements will be met:
 1. MRp2/MRc5, Waste management plan, complying with Section 017419 "Construction Waste Management and Disposal."
 2. EQc3 - Construction IAQ Management Plan:
 - a. Document all control measures to be used during construction to comply with the SMACNA IAQ Guidelines for Occupied Buildings under Construction, 2nd edition, 2007, ANSI/SMACNA 008-2008, Chapter 3.
 - b. Describe proposed measures to protect absorptive materials stored on-site and installed from moisture damage.
 - c. Describe methods to prohibit the use of tobacco products inside the building and within 25 feet (8 meters) of the building entrance during construction.
- E. LEED Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with LEED action plans for the following:
- F. MRp2/MRc5, Waste reduction progress reports complying with Section 017419 "Construction Waste Management and Disposal."
- G. MRc2, Building product disclosure and optimization - environmental product declarations.
- H. MRc3, Building product disclosure and optimization - sourcing of raw materials.
- I. MRc4, Building product disclosure and optimization - material ingredients.
- J. EQc2, Low emitting materials.
 1. Low Emitting Materials Tracking Sheet monitoring the project's progress towards targeted LEED Indoor Environmental Quality Credits. Tracking Sheet to be presented at construction meetings.

1.6 QUALITY ASSURANCE

- A. LEED Coordinator: Engage an experienced LEED-Accredited Professional to coordinate LEED requirements. LEED coordinator may also serve as waste management coordinator.
- B. LEED Preconstruction Meeting: Architect to conduct meeting at project site as part of the Pre-Construction Conference to comply with requirements of this section.
 1. The General Contractor shall require all major subcontractors to attend meeting.
 2. Review methods and procedures related to managing the LEED construction process and to include, but are not limited to the following:
 - a. Understanding LEED process and terminology.
 - b. Understanding contractor responsibilities and LEED submittal process.
 - c. Maintaining proper meeting minutes, records, and tracking mechanisms related to LEED credit responsibilities.
 - d. Understanding LEED certification process and filling out LEED Online submittal forms.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Provide products and procedures necessary to obtain LEED credits required in this Section. Although other Sections may specify some requirements that contribute to LEED credits, the Contractor shall determine additional materials and procedures necessary to obtain LEED credits indicated. Contractor to determine a combination of credit options best suited for achieving credits required.
1. Exclusions: Special equipment, such as elevators, escalators, process equipment, and fire suppression systems, is excluded from the credit calculations. Also excluded are products purchased for temporary use on the project, like formwork for concrete.

2.2 BUILDING PRODUCT DISCLOSURE AND OPTIMIZATION

- A. MRc2, Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): *Option 1*.
1. Provide at least 20 permanently installed products (sourced from at least 5 different manufacturers) which meet one of the disclosure criteria:
 - a. Product-Specific Declaration: Valued as one quarter (1/4) of a product.
 - b. Industry-Wide (Generic) EPD: Valued as one half (1/2) of a product.
 - c. Product-Specific Type III EPD: Valued as one whole product.
 2. Products sourced within 100 miles of the project site are valued at twice their contributing cost or number of products.
 3. The following 20 products have been selected to comply with MRc2, *Option 1*. If the Contractor chooses not include any of these products in the Project, the Contractor shall propose an alternative product that complies with the credit requirements in its place:
 - a. To be selected by LEED coordinators.
- B. MRc2, Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): *Option 2*.
1. Provide products representing at least 10% of the cost of the total value of permanently installed products in the project, or at least 5 permanently installed products sourced from at least three different manufacturers that meet one of the disclosure criteria:
 - a. Life Cycle Impact Reduction Action Plan
 - b. Life Cycle Impact Reductions in Embodied Carbon
 - c. Products with environmental impact reductions demonstrated by third-party verified EPDs conforming to ISO 14025 and ISO 21930
 2. Products sourced within 100 miles of the project site are valued at twice their contributing cost or number of products.
 3. The following 5 products have been selected to comply with MRc2, *Option 2*. If the Contractor chooses not include any of these products in the Project, the Contractor shall propose an alternative product that complies with the credit requirements in its place:
 - a. To be selected by LEED coordinators.
- C. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials: *Option 1*, Responsible Sourcing of Raw Materials. Use products sourced from at least three different manufacturers that meet at least one of the responsible sourcing and extraction criteria below for at least 15%, by cost, of the total value of permanently installed building products in the project:
1. Extended producer responsibility program.
 2. Bio-based materials.
 3. Certified Wood: Wood-based materials include, but are not limited to, the following materials when made from wood, engineered wood products, or wood-based panel products:
 - a. Rough carpentry.

- b. Miscellaneous carpentry.
 - c. Heavy timber construction.
 - d. Wood decking.
 - e. Metal-plate-connected wood trusses.
 - f. Structural glued-laminated timber.
 - g. Finish carpentry.
 - h. Architectural woodwork.
 - i. Wood paneling.
 - j. Wood veneer wall covering.
 - k. Wood flooring.
 - l. Wood lockers.
 - m. Wood cabinets.
 - n. Furniture.
4. Recycled content.
- a. Exceptions: Do not include furniture, fire protection, operational plumbing, operational mechanical, and operational electrical components, and specialty items, such as elevators and equipment, in the calculation.
5. Products sourced within 100 miles of the project site are valued at twice their contributing cost.
- D. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials: *Option 2*, Responsible Sourcing of Raw Materials. Use products sourced from at least three different manufacturers that meet at least one of the responsible sourcing and extraction criteria listed in 2.2 C. above for at least 30%, by cost, of the total value of permanently installed building products in the project.
- E. MRc4, Building Product Disclosure and Optimization, Material Ingredients: *Option 1*, Material Ingredient Reporting.
- 1. Use at least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm), which meet one of the following disclosure criteria:
 - a. Manufacturer Inventory.
 - b. Health Product Declarations (HPDs).
 - c. Cradle to Cradle (C2C) certifications.
 - d. Declare product labels.
 - e. Living Building Challenge
 - f. ANSI/BIFMA e3 Furniture Sustainability Standard.
 - g. Product Lens Certification
 - h. Facts - NSF/ANSI 336: Sustainability Assessment for Commercial Furnishings Fabric
 - 2. Products sourced within 100 miles of the project site are valued at twice their contributing cost or number of products.
 - 3. The following 20 products have been selected to comply with MRc4, *Option 1*. If the Contractor chooses not include any of these products in the Project, the Contractor shall propose an alternative product that complies with the credit requirements in its place:
 - a. To be selected by LEED coordinators.
- F. MRc4, Building Product Disclosure and Optimization, Material Ingredients: *Option 2*, Material Ingredient Optimization.
- 1. Use products representing at least 10% of the cost of the total value of permanently installed products in the project, or at least 10 permanently installed products sourced from at least three different manufacturers that document their material ingredient optimization using the paths below, which meet one of the following disclosure criteria:
 - a. Material Ingredient Screening and Optimization Action Plan
 - b. Advanced Inventory & Assessment
 - c. Material Ingredient Optimization
 - d. GreenScreen benchmarks.
 - e. Declare Labels designated as Red List Free

- f. Cradle to Cradle version 3 or later certifications.
 - g. REACH optimizations.
2. Products sourced within 100 miles of the project site are valued at twice their contributing cost or number of products.
 3. The following 10 products have been selected to comply with MRc4, *Option 2*. If the Contractor chooses not include any of these products in the Project, the Contractor shall propose an alternative product that complies with the credit requirements in its place:
 - a. To be selected by LEED coordinators.

2.3 LOW-EMITTING MATERIALS

- A. EQc2, Low-Emitting Materials, *General Emissions Requirements*: Products must demonstrate they have been tested and determined compliant in accordance with California Department of Public Health, (CDHP), Standard Method v1.1-2010, using the applicable exposure scenario. Manufacturer's documentation demonstrating compliance must state the range of total VOCs (tVOC) after 14 days measured as specified in the CDPH Standard Method v1.1 as follows:
1. 0.5mg/m3 or less,
 2. between 0.5 and 5.0 mg/m3 or,
 3. 0.50 mg/m3 or more.
- B. EQc2, Low-Emitting Materials, *Paints and Coatings*: For field applications that are inside the weatherproofing system, use paints and coatings that comply with the limits for VOC content when calculated according to the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, or the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective June 3, 2011.

Product Type:	Allowable VOC Content (g/L):
Bond Breaker	350
Clear wood finishes - Varnish	275
Clear wood finishes - Sanding Sealer	275
Clear wood finishes - Lacquer	275
Colorant - Architectural Coatings, excluding IM coatings	50
Colorant - Solvent Based IM	600
Colorant - Waterborne IM	50
Concrete - Curing compounds	100
Concrete - Curing compounds for roadways & bridges	350
Concrete surface retarder	50
Driveway Sealer	50
Dry-fog coatings	50
Faux finishing coatings - Clear topcoat	100
Faux finishing coatings - Decorative Coatings	350
Faux finishing coatings - Glazes	350
Faux finishing coatings - Japan	350
Faux finishing coatings - Trowel applied coatings	50
Fire-proof coatings	150
Flats	50
Floor coatings	50
Form release compounds	100
Graphic arts (sign) coatings	150
Industrial maintenance coatings	100
Industrial maintenance coatings - High temperature IM coatings	420
Industrial maintenance coatings - Non-sacrificial anti-graffiti coatings	100

Industrial maintenance coatings - Zinc rich IM primers	100
Magnesite cement coatings	450
Mastic coatings	100
Metallic pigmented coatings	150
Multi-color coatings	250
Non-flat coatings	50
Pre-treatment wash primers	420
Primers, sealers and undercoaters	100
Reactive penetrating sealers	350
Recycled coatings	250
Roof coatings	50
Roof coatings, aluminum	100
Roof primers, bituminous	350
Rust preventative coatings	100
Stone consolidant	450
Sacrificial anti-graffiti coatings	50
Shellac- Clear	730
Shellac - Pigmented	550
Specialty primers	100
Stains	100
Stains, interior	250
Swimming pool coatings - repair	340
Swimming pool coatings - other	340
Traffic Coatings	100
Waterproofing sealers	100
Waterproofing concrete/masonry sealers	100
Wood preservatives	350
Low solids coatings	120

C. EQc2, Low-Emitting Materials, *Paints and Coatings*: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

D. EQc2, Low-Emitting Materials, *Adhesives and Sealants*: For field applications that are inside the weatherproofing system, use adhesives and sealants that comply with the limits for VOC content when calculated according to South Coast Air Quality Management District (SCAQMD) Rule #1168, requirements in effect on July 1, 2005, and rule amendment date January 7, 2005:

Architectural Applications:	Allowable VOC Content (g/L):
Indoor carpet adhesives	50
Carpet pad adhesives	50
Outdoor carpet adhesives	150
Wood flooring adhesives	100
Rubber floor adhesives	60
Subfloor adhesives	50
Ceramic tile adhesives	65
VCT and asphalt tile adhesives	50
Dry wall and panel adhesives	50
Cove base adhesives	50
Multipurpose construction adhesives	70
Structural glazing adhesives	100
Single ply roof membrane adhesives	250
Specialty Applications:	

PVC welding	510
CPVC welding	490
ABS welding	325
Plastic cement welding	250
Adhesive primer for plastic	550
Computer diskette manufacturing	350
Contact adhesive	80
Special purpose contact adhesive	250
Tire retread	100
Adhesive primer for traffic marking tape	150
Structural wood member adhesive	140
Sheet applied rubber lining operations specialty	850
Top and Trim adhesive	250
Substrate Specific Applications:	
Metal to metal substrate specific adhesives	30
Plastic foam substrate specific adhesives	50
Porous material (except wood) substrate specific adhesives	50
Wood substrate specific adhesives	30
Fiberglass substrate specific adhesives	80
Sealants:	
Architectural sealant	250
Marine deck sealant	760
Nonmember roof sealant	300
Roadway sealant	250
Single-ply roof membrane sealant	450
Other sealant	420
Sealant Primers:	
Architectural non-porous sealant primer	250
Architectural porous sealant primer	775
Modified bituminous sealant primer	500
Marine deck sealant primer	760
Other sealant primer	750
Other	
Other adhesives, adhesive bonding primers, adhesive primers or any other primers	250

1. Exception: The provisions of SCAQMD Rule 1168 do not apply to adhesives and sealants subject to state or federal consumer product VOC regulations.
- E. EQc2, Low-Emitting Materials, *Adhesives and Sealants*: For field applications that are inside the weatherproofing system, 90 percent of adhesives and sealants shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. EQc2, Low-Emitting Materials, *Flooring*: Flooring shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- G. EQc2, Low-Emitting Materials, *Composite Wood*: Composite wood, agrifiber products, and adhesives shall be made using ultra-low-emitting formaldehyde (ULEF) resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure (ATCM) to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde. Alternately, EN 717-1:2014 is acceptable as well.

- H. EQc2, Low-Emitting Materials, *Ceilings, Walls, Thermal, and Acoustic Insulation*: Ceilings, walls, and thermal insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- I. EQc2, Low-Emitting Materials, *Exterior Applied Materials*: At least 90 percent of exterior applied materials, measured by volume, shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 1. The following materials are prohibited and do not count toward total percentage compliance:
 - a. Hot-mopped asphalt for roofing.
 - b. Coal tar sealants for parking lots and other paved surfaces.
- J. EQc2, Low-Emitting Materials, *Furniture*: At least 90 percent of furniture, measured by cost, shall be tested in accordance with ANSI/BIFMA Standard Method M7.1-2011 (R-2016); comply with ANSI/BIFMA e3-2014 Furniture Sustainability Standard, Sections 7.6.1 (half credit) and/or 7.6.2 (full credit), using either the concentration modeling approach or the emissions factor approach; and model the test results using the open plan, private office, or seating scenario in ANSI/BIFMA M7.1, as appropriate.
- K. Additional Low-Emitting Requirements:
 - 1. If the applicable regulation requires subtraction of exempt compounds, any content of intentionally added exempt compounds larger than 1% weight by mass (total exempt compounds) must be disclosed.
 - 2. If a product cannot reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, part 1; ASTM D6886-03; or ISO 11890-2.
 - 3. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealants.

2.4 INDOOR WATER USE REDUCTION

- A. WEp2, Indoor Water Use Reduction, Appliances: Provide ENERGY STAR or performance equivalent appliances.
- B. WEp2/WEc2, Indoor Water Use Reduction, Plumbing Fixtures: Do not exceed water flow requirements indicated in Division 22 - PLUMBING.

PART 3 - EXECUTION

3.1 NONSMOKING BUILDING

- A. EQp2, Environmental Tobacco Smoke Control: Smoking is not permitted within the building or within 25 feet (8 m) of entrances, operable windows, or outdoor-air intakes.

3.2 CONSTRUCTION WASTE MANAGEMENT

- A. MRp2/MRc5, Construction and Demolition Waste Management: Comply with Section 017419 "Construction Waste Management and Disposal."

3.3 CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT

- A. EQc3, Construction Indoor Air Quality Management Plan:
 - 1. Meet or exceed all applicable recommended control measures of the Sheet Metal and Air Conditioning National Contractors Association (SMACNA) IAQ Guidelines for Occupied Buildings under Construction, 2nd edition, 2007, ANSI/SMACNA 008-2008, Chapter 3.

- a. If District authorizes use of permanent heating, cooling, and ventilating systems during construction period as specified in Division 01 Section "Temporary Utilities," install filter media having a MERV 8 according to ASHRAE 52.2-2007 at each return-air inlet for the air-handling system used during construction.
 - b. Replace all air filters immediately prior to occupancy.
2. Protect absorptive materials stored on-site and installed from moisture damage.
 3. Prohibit the use of tobacco products inside the building and within 25 feet (8 meters) of the building entrance during construction
- B. EQc4 - Indoor Air Quality Assessment
- C. Flush-Out:
1. After construction ends, prior to occupancy and with all interior finishes installed, perform a building flush-out by supplying a total volume of 14,000 cu. ft. (4 300 000 L) of outdoor air per sq. ft. (sq. m) of floor area while maintaining an internal temperature of at least 60 deg F (16 deg C) and a relative humidity no higher than 60 percent.
 2. If occupancy is desired prior to flush-out completion, the space may be occupied following delivery of a minimum of 3500 cu. ft. (1 070 000 L) of outdoor air per sq. ft. (sq. m) of floor area to the space. Once a space is occupied, it shall be ventilated at a minimum rate of 0.30 cfm per sq. ft. (1.52 L/s per sq. m) of outside air or the design minimum outside-air rate, whichever is greater. During each day of the flush-out period, ventilation shall begin a minimum of three hours prior to occupancy and continue during occupancy. These conditions shall be maintained until a total of 14,000 cu. ft./sq. ft. (4 300 000 L/sq. m) of outside air has been delivered to the space.
- D. Air-Quality Testing: District will engage testing agency to perform the following:
1. Conduct baseline IAQ testing, after construction ends and prior to occupancy, using testing protocols listed in Section 018113.71 "CALGreen Non-Residential Mandatory Measures" and as additionally detailed in the USGBC's "LEED Reference Guide for Building Design and Construction."
 2. Demonstrate that the contaminant maximum concentrations listed in Section 018113.71 "CALGreen Non-Residential Mandatory Measures" are not exceeded. In addition, include the following:
 - a. Target Chemicals in California Department of Public Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers," Table 4-1 (except formaldehyde): Allowable concentrations in California Department of Public Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers," Table 4-1.
 3. For each sampling point where the maximum concentration limits are exceeded, take corrective action until requirements have been met.
 4. Air-sample testing shall be conducted as follows:
 - a. All measurements shall be conducted prior to occupancy but during normal occupied hours, and with building ventilation system starting at the normal daily start time and operated at the minimum outside-air flow rate for the occupied mode throughout the duration of the air testing.
 - b. Building shall have all interior finishes installed, including, but not limited to, millwork, doors, paint, carpet, and acoustic tiles. Nonfixed furnishings, such as workstations and partitions, are encouraged, but not required, to be in place for the testing.
 - c. Number of sampling locations varies depending on the size of building and number of ventilation systems. For each portion of building served by a separate ventilation system, the number of sampling points shall not be less than one per 5000 sq. ft. (465 sq. m).
 - d. Air samples shall be collected between 3 and 6 feet (900 and 1800 mm) from the floor to represent the breathing zone of occupants, and over a minimum four-hour period.

SECTION 018113.71 - CALGREEN NON-RESIDENTIAL MANDATORY MEASURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: General requirements and procedures for compliance with and certification from 24 CCR 11 (hereafter, "CALGreen").
 - 1. Some CALGreen requirements depend on product selections and may not be specifically identified as CALGreen requirements. Compliance with CALGreen requirements may be used as one criterion to evaluate substitution requests and comparable product requests.
 - 2. Copies of CALGreen project checklists can be obtained from the CALGreen website. (www.dgs.ca.gov/BSC/CALGreen). The checklists are for Mandatory Measures, with additional available for the voluntary CALGreen Tier 1 and Tier 2 levels of certification.
 - a. Some CALGreen requirements depend on Architect's design and other aspects of Project that are not part of the Work of the Contract.

1.2 DEFINITIONS

- A. Environmental Product Declaration (EPD): An independently verified report based on life-cycle assessment studies that have been conducted according to a set of common rules for each product category and peer-reviewed.
 - 1. Product-Specific Type III EPD: A product with a third-party certification, including external verification, in which the manufacturer is explicitly recognized by the program operator. EPD shall conform to ISO 14025, 14040, 14044, and EN 15804 or ISO 21930, and shall have at least a cradle to gate scope.
- B. Composite Wood Products: Hardwood plywood, particleboard, and medium-density fiberboard. Composite wood products do not include hardboard, structural plywood.
- C. Global Warming Potential (GWP): The radioactive forcing impact of one mass-based unit of a given greenhouse gas relative to an equivalent unit of carbon dioxide over a given period of time. Carbon dioxide is the reference compound with a GWP of one.
- D. Global Warming Potential Value (GWP Value): The 100-year GWP value published by the Inter-governmental Panel on Climate Change (IPCC) in either its Second Assessment Report (SAR) (IPCC, 1995); or its Fourth Assessment A-3 Report (AR4) (IPCC, 2007). The SAR GWP values are found in column "SAR (100-yr)" of Table 2.14; the AR4 GWP values are found in column "100 yr" of Table 2.14.
- E. Recycled Content: Component of a material made of recycled materials. Recycled material can be derived from two sources: pre-consumer, also known as "post-industrial," or "post-consumer." "Post-consumer recycled material" refers to items, such as aluminum cans, that have been in the consumer market. Post-industrial material is waste generated from the original manufacturing process that is used again.
- F. VOCs: Volatile organic compounds.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project Site. Review CALGreen requirements and action plans for compliance with requirements. Also, reference Section 013119 "Project Meetings" for further information.

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Respond to questions and requests from Architect about CALGreen requirements that depend on product selection or product qualities. Document responses as informational submittals.
- B. Submit documentation to enforcing agency for credits that are the responsibility of Contractor, that depend on product selection or product qualities, or that depend on Contractor's procedures until enforcing agency has made its determination on Project's CALGreen certification application.
 - 1. Document correspondence with review team, as assigned by the enforcing agency, as informational submittals.
- C. Environmental Management System: Document the following:
 - 1. Environmental policy.
 - 2. Regulatory compliance and training.
 - 3. Environmental risk assessment that shows sensitive environmental areas and ranks potential risks that may arise from the construction.
 - 4. Environmental risk management strategies.
 - 5. Environmental management roles, responsibilities, and reporting structure for the construction phase.
 - 6. Site and work instructions for site personnel, outlining environmental procedures during construction.
 - 7. Environmental inspection checklists.
 - 8. Records of compliance.

1.5 ACTION SUBMITTALS

- A. General: Submit additional sustainable design submittals required by other Specification Sections.
- B. Sustainable design submittals are in addition to other submittals.
 - 1. If submitted item is identical to that submitted to comply with other requirements, include an additional copy with other submittal as a record copy of compliance with indicated CALGreen requirements instead of separate sustainable design submittal. Mark additional copy "Sustainable Design Submittal."
- C. Sustainable Design Documentation Submittals:
 - 1. Stormwater pollution prevention plan.
 - 2. Product data for irrigation system components, including, but not limited to, the following:
 - a. Sprinkler Heads: Indicate degree of head rotation and spray characteristics/pattern.
 - b. Controllers and sensors.
 - 3. Product data and schedules for plumbing fixtures and fittings. Include rated capacities and WaterSense certification where applicable.
 - 4. Product data for residential appliances, indicating that products are Energy Star rated.
 - 5. Environmental management system documents.
 - 6. Lighting controls.
 - 7. Environmental product declarations.
 - 8. Third-party certifications based on multiple-attribute standards.
 - 9. Third-party-certified life-cycle product assessments.
 - 10. Product data, manufacturer's certifications, chain-of-custody certification, or other documentation acceptable to authorities having jurisdiction; for products containing composite wood, agrifiber products, or wood glues, indicate compliance with California Air Resource Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Missions from Composite Wood."
 - 11. Construction waste and recycling plan complying with Section 017419 "Construction Waste Management."

12. Product data and laboratory test reports for adhesives and sealants indicating VOC content and compliance with requirements for low-emitting materials.
13. Certificates for carpet and undercarpet adhesives indicating compliance with Carpet and Rug Institute's Green Label Plus testing program.
14. Product data and laboratory test reports for paints and coatings indicating VOC content and compliance with requirements for low-emitting materials.
15. Laboratory test reports for hard flooring, insulation, acoustical ceilings, and wall coverings, indicating compliance with requirements for low-emitting materials, as defined in "Low-Emitting Materials" Article.
16. IAQ testing report from testing and inspecting agency indicating results of IAQ testing and documentation that show compliance with IAQ testing procedures and requirements.
17. Type III Environmental Product Declarations for products required to comply, including: Ready-mixed concrete, hot rolled steel sections, hollow structural sections, steel plate, concrete reinforcing steel, flat glass, and mineral wool board insulation.

1.6 INFORMATIONAL SUBMITTALS

- A. Project Materials Cost Data: Submit statement indicating total cost for materials used for the Work. Costs exclude labor, overhead, and profit. Include breakout of costs for the following categories of items:
 1. Plumbing.
 2. Mechanical.
 3. Electrical.
 4. Specialty items, such as elevators and equipment.
 5. Wood-based construction materials.
- B. Sustainable Design Action Plans: Submit preliminary submittals within 30 days of date established for the Notice of Award indicating how the following requirements will be met:
 1. CALGreen checklist for mandatory measures.
 2. CALGreen Tier 1 or Tier 2 checklist as required.
 3. List of products with environmental product declarations.
 4. List of products complying with requirements for multiple-attribute standards.
 5. List of products complying with requirements for life-cycle product assessments.
 6. Environmental policy.
 7. Construction Waste and Recycling Plan complying with Section 017419 "Construction Waste Management."
 8. Construction IAQ management plan.
- C. Sustainable Design Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with sustainable design action plans.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Provide products and procedures necessary to comply with CALGreen requirements referenced in the Evaluations. Although other Sections may specify some requirements that contribute to referenced CALGreen requirements, determine additional materials and procedures necessary to comply with CALGreen requirements indicated.

2.2 LOW-EMITTING MATERIALS

- A. Adhesives and Sealants:
 1. For field applications inside the building, adhesives and sealants shall comply with the following VOC content limits:
 - a. Wood Glues: 30 g/L.

- b. Metal-to-Metal Adhesives: 30 g/L.
 - c. Adhesives for Porous Materials (except Wood): 50 g/L.
 - d. Subfloor Adhesives: 50 g/L.
 - e. Plastic Foam Adhesives: 50 g/L.
 - f. Carpet Adhesives: 50 g/L.
 - g. Carpet Pad Adhesives: 50 g/L.
 - h. VCT and Asphalt Tile Adhesives: 50 g/L.
 - i. Cove Base Adhesives: 50 g/L.
 - j. Gypsum Board and Panel Adhesives: 50 g/L.
 - k. Rubber Floor Adhesives: 60 g/L.
 - l. Ceramic Tile Adhesives: 65 g/L.
 - m. Multipurpose Construction Adhesives: 70 g/L.
 - n. Fiberglass Adhesives: 80 g/L.
 - o. Contact Adhesive: 80 g/L.
 - p. Structural Glazing Adhesives: 100 g/L.
 - q. Wood Flooring Adhesive: 100 g/L.
 - r. Single-Ply Roof Membrane Adhesive: 250 g/L.
 - s. Special-Purpose Contact Adhesive (Contact Adhesive That Is Used to Bond Melamine Covered Board, Metal, Unsupported Vinyl, Rubber, or Wood Veneer 1/16 Inch or Less in Thickness to Any Surface): 250 g/L.
 - t. Plastic Cement Welding Compounds: 250 g/L.
 - u. ABS Welding Compounds: 325 g/L.
 - v. CPVC Welding Compounds: 490 g/L.
 - w. PVC Welding Compounds: 510 g/L.
 - x. Adhesive Primer for Plastic: 550 g/L.
 - y. Architectural Sealants: 250 g/L.
 - z. Nonmembrane Roof Sealants: 300 g/L.
 - aa. Single-Ply Roof Membrane Sealants: 450 g/L.
 - bb. Other Sealants: 420 g/L.
2. For field applications inside the building, adhesives and sealants must comply with the requirements of SCAQMD Rule 1168 or local code when tested in accordance with the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Carpet, cushion, and undercarpet adhesives will comply with CRI's Green Label Plus testing program.
- C. Paints: For field applications inside the building, wall paints must comply with local code requirements when tested in accordance with the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. Resilient Flooring: Flooring must be certified by the Resilient Floor Covering Institute and/or be compliant when tested in accordance with the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Flooring must also comply with the Collaborative for High Performance Schools (CHPS) requirements.
- E. Thermal Insulation: Provide insulation complying with CALGreen Tier 1 or 2 requirements.
- F. Ceiling and Wall Panels: Acoustical ceiling and wall-cladding products must comply with the VOC emissions limits defined in the CHPS criteria and be listed in the CHPS Pre-Approved Products database or have a Greenguard Certification Program.

2.3 LOW-CARBON MATERIALS

- A. The following products shall achieve a GWP below the maximum acceptable value indicated according to CALGreen Table 5.409.3 - Product GWP Limits.

PART 3 - BUY CLEAN CALIFORNIA MATERIALS PRODUCT CATEGORY	PART 4 - MAXIMUM ACCEPTABLE GWP VALUE (Unfabricated)	PART 6 - UNIT OF MEASUREMENT
	PART 5 - (GWP allowed)	
PART 7 - Hot-rolled structural steel sections	PART 8 - 1.77	PART 9 - MT CO2e/MT
PART 10 - Hollow structural sections	PART 11 - 3.00	PART 12 - MT CO2e/MT
PART 13 - Steel plate	PART 14 - 2.61	PART 15 - MT CO2e/MT
PART 16 - Concrete reinforcing steel	PART 17 - 1.56	PART 18 - MT CO2e/MT
PART 19 - Flat Glass	PART 20 - 2.50	PART 21 - MT CO2e/MT
PART 22 - Light-density mineral wool board insulation	PART 23 - 5.83	PART 24 - MT CO2e/MT
PART 25 - Heavy-density mineral wool board insulation	PART 26 - 14.28	PART 27 - MT CO2e/MT
PART 28 - CONCRETE PRODUCT CATEGORY	PART 30 - MAXIMUM GWP ALLOWED VALUE (GWP allowed)	PART 31 - UNIT OF MEASUREMENT
PART 29 - (Concrete, Ready-Mixed)		
PART 32 - up to 2499 psi	PART 33 - 450	PART 34 - kg CO2/m3
PART 35 - 2500-3499 psi	PART 36 - 489	PART 37 - kg CO2/m3
PART 38 - 3500-4499 psi	PART 39 - 566	PART 40 - kg CO2/m3

PART 41 - 4500-5499 psi	PART 42 - 661	PART 43 - kg CO2/m3
PART 44 - 5500-6499 psi	PART 45 - 701	PART 46 - kg CO2/m3
PART 47 - 6500 psi and greater	PART 48 - 799	PART 49 - kg CO2/m3
PART 50 - CONCRETE PRDOUCT CATEGORY	PART 52 - MAXIMUM GWP ALLOWED VALUE (GWP allowed)	PART 53 - UNIT OF MEASUREMENT
PART 51 - (Lighweight Concrete, Ready-Mixed)		
PART 54 - up to 2499 psi	PART 55 - 875	PART 56 - kg CO2/m3
PART 57 - 2500-3499 psi	PART 58 - 956	PART 59 - kg CO2/m3
PART 60 - 3500-4499 psi	PART 61 - 1039	PART 62 - kg CO2/m3

PART 63 - EXECUTION

63.1 CONSTRUCTION WASTE MANAGEMENT

- A. CALGreen requires use of a construction waste management plan outlining how waste will be divided on the construction site, as well as how often it will be hauled to a landfill or recycling center and by whom.
- B. CALGreen includes a sample plan outlining all specific requirements of the plan.
- C. Comply with Section 017419 "Construction Waste Management."

63.2 COMMISSIONING

- A. CALGreen requires commissioning of the building mechanical and electrical systems to ensure proper installation and optimized performance as the building starts to be occupied. It also requires a systematic quality assurance process that spans the entire design and construction process and includes verifying and documenting that building systems and components are planned, designed, installed, tested, operated, and maintained to meet Owner's project requirements.

63.3 INDOOR-AIR-QUALITY ASSESSMENT

- A. Air-Quality Testing:

1. Conduct baseline IAQ testing, after substantial completion of construction and prior to occupancy, in accordance with the CALGreen *Section A5.504.2.1: IAQ testing (2022)*.
2. Verify compliance with standards and limits in the CALGreen *Section A5.504.2.1: IAQ testing (2022)*.
 - a. Carbon monoxide maximum is 9 ppm, not to exceed outdoor levels by 2 ppm.
 - b. Formaldehyde maximum is 27 ppb.
 - c. Particulates maximum is 50 micrograms per cubic meter.
 - d. 4-Phenylcycohexene maximum is 6.5 micrograms per cubic meter.
 - e. Total VOC maximum is 300 micrograms per cubic meter.
3. For each sampling point where the maximum concentration limits are exceeded, take corrective action until air samples indicate compliance.
4. For each sampling point where airborne mold and mildew indoor species distribution varies by more than 10 percent from exterior sampling specification, identify source of mold and mildew and remediate with corrective action, then retest until compliant results are attained.
5. If noncompliant test results occur, provide a written report describing source(s) of noncompliant condition(s) and corrective action(s) implemented.

END OF SECTION 018113.71

SECTION 019113 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.
- B. Owner's Project Requirements (OPR) and Basis of Design Document (BOD) are included by reference for information only.

1.2 SUMMARY

- A. Section Includes:
 - 1. General requirements for coordinating and scheduling commissioning activities.
 - 2. Commissioning meetings.
 - 3. Commissioning reports.
 - 4. Use of commissioning process test equipment, instrumentation, and tools.
 - 5. Construction checklists, including, but not limited to, installation checks, startup, performance tests, and performance test demonstration.
 - 6. Commissioning tests and commissioning test demonstration.
 - 7. Adjusting, verifying, and documenting identified systems and assemblies.

As applied to the commissioning requirements for mechanical (including building automation system), electrical, plumbing (MEPCx), renewable energy, and irrigation controls.
- B. Commissioning is a systematic process of verifying that the building systems perform interactively according to the construction documents and the Owner's operational needs. The commissioning process shall encompass and coordinate the system documentation, equipment startup, control system calibration, testing and balancing, performance testing, and training. Commissioning during the construction and post-occupancy phases is intended to achieve the following specific objectives according to the contract documents:
 - 1. Verify that the applicable equipment and systems are installed in accordance with the contract documents and according to the manufacturer's recommendations.
 - 2. Verify and document proper integrated performance of equipment and systems.
 - 3. Verify that Operations & Maintenance documentation is complete.
 - 4. Verify that all components requiring servicing can be accessed, serviced and removed without disturbing nearby components including ducts, piping, cabling or wiring.
 - 5. Verify that the Owner's operating personnel are adequately trained to enable them to operate, monitor, adjust, maintain, and repair building systems in an effective and energy-efficient manner.
 - 6. Document the successful achievement of the commissioning objectives listed above.
- C. Various sections of the project specifications require equipment startup, testing, and adjusting services. Requirements for startup, testing, and adjusting services specified in the technical sections of these specifications are intended to be provided in coordination with the commissioning services and are not intended to duplicate services. The Contractor shall coordinate the work required by individual specification sections with the commissioning services requirements specified herein.
- D. The commissioning process does not take away from or reduce the responsibility of the Contractor to provide a finished and fully functioning product.
- E. Related Requirements:
 - 1. SECTION 01 11 00: SUMMARY OF WORK
 - 2. SECTION 01 31 00: PROJECT COORDINATION
 - 3. SECTION 01 31 19: PROJECT MEETINGS
 - 4. SECTION 01 32 00: PROGRESS SCHEDULE AND REPORTS
 - 5. SECTION 01 33 00: SUBMITTAL PROCEDURES
 - 6. SECTION 01 45 00: QUALITY CONTROL
 - 7. SECTION 01 70 00: CONTRACT CLOSEOUT
 - 8. SECTION 01 78 00: PROJECT RECORD DOCUMENTS
 - 9. SECTION 01 78 23: OPERATION AND MAINTENANCE DATA

10. SECTION 01 79 00: DEMONSTRATION AND TRAINING
11. SECTION 01 81 13.15: SUSTAINABLE DESIGN REQUIREMENTS – LEED V4 BD+C
12. SECTION 01 81 13.71: CALGREEN NON-RESIDENTIAL MANDATORY MEASURES
13. DIVISION 22: PLUMBING – COMMISSIONING REQUIREMENTS APPLY TO THE SYSTEM(S) SHOWN IN SECTION 3.8 COMMISSIONED SYSTEMS, OF THIS DOCUMENT.
14. DIVISION 23: HEATING VENTILATING AND AIR CONDITIONING – COMMISSIONING REQUIREMENTS APPLY TO THE SYSTEM(S) SHOWN IN SECTION 3.8 COMMISSIONED SYSTEMS, OF THIS DOCUMENT.
15. DIVISION 26: ELECTRICAL – COMMISSIONING REQUIREMENTS APPLY TO THE SYSTEM(S) SHOWN IN SECTION 3.8 COMMISSIONED SYSTEMS, OF THIS DOCUMENT.
16. SECTION 32 84 00: PLANTING IRRIGATION

1.3 DEFINITIONS

- A. Acceptance Criteria: Threshold of acceptable work quality or performance specified for a commissioning activity, including, but not limited to, construction checklists, performance tests, performance test demonstrations, commissioning tests, and commissioning test demonstrations.
- B. Acceptance Phase: Phase of construction after startup and initial checkout when functional performance tests, O&M documentation review and training occurs.
- C. Approval: Acceptance that a piece of equipment or system has been properly installed and is functioning in the tested modes according to the Contract Documents.
- D. Architect/Engineer (A/E): The prime consultant (architect) and sub-consultants who comprise the design team. As it pertains to commissioning, the A/E is the design professional responsible for the design of the portion of the project being commissioned.
- E. Basis of Design (BoD) document: A document that records concepts, calculations, decisions, and product selections used to meet the OPR and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.
- F. Building Automation System (BAS): The central building control system and energy management system. Also referred to as a Controls System.
- G. Building Management System (BMS): In general practice, this is just a different name for the BAS.
- H. Commissioning (Cx): - A quality-focused process for enhancing the delivery of a project. The process focuses upon verifying and documenting that the facility and all of its systems and assemblies are planned, designed, installed, tested, operated and maintained to meet the Owner's Project Requirements.
- I. Commissioning Activity Schedule: A commissioning schedule designed to provide team members with a descriptive overview of commissioning activities as they relate to parallel construction activities regardless of changes to the construction schedule. (See Exhibit B this specification and Cx Plan)
- J. Commissioning Authority (CxA): An entity identified by the Owner who leads, plans, schedules, and coordinates the commissioning team to implement the Commissioning Process. The CxA reports directly to the Owner without assuming oversight responsibilities.
- K. Commissioning Coordinator (CxC): A person or entity employed by the Contractor to manage, schedule and coordinate the commissioning process.
- L. Commissioning Plan (Cx Plan): A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the Commissioning Process.
- M. Construction Manager (CM): Owner's on-site representative in day-to-day activities, including supervision and management of construction activities.

- N. Commissioning Team: The commissioning team is composed of key members from the Owner, the design team, the construction team, and critical equipment installers.
- O. Contract Documents: They include a wide range of documents that will vary from project to project and with the Owner's needs and regulations, laws, and countries, construction management process, subcontractor agreements or requirements, requirements and procedures for submittals, changes, and other construction requirements, timeline for completion, and other Construction Documents.
- P. Contractor (C) or General Contractor (GC): The person or entity under contract with the Owner pursuant to the Construction Contract to serve as the General Contractor for the construction work.
- Q. Control System: A component of environmental, HVAC, security and fire systems for reporting, monitoring and issuing of commands.
- R. Data Logging: Monitoring flows, currents, status, pressures, etc. of equipment using stand-alone data loggers separate from the control system.
- S. DDC: Acronym for Direct Digital Controls. This is the most typical controls platform for BAS' / BMS'.
- T. Deferred Functional Tests: Functional Tests that are performed later, after substantial completion, equipment, seasonal requirements, design, or other site conditions that disallow tests from being performed.
- U. Deficiency or Commissioning Issue: A condition identified by the Commissioning Agent or other member of the Commissioning Team that adversely affects the commissionability, operability, maintainability, or functionality of a system, equipment, or component. A condition that is in conflict with the Contract Documents and/or performance requirements of the installed systems and components.
- V. Factory Testing: Testing of equipment on-site or at the factory, by factory personnel with District's representative present.
- W. Facilities Manager (FM): The Owner representative responsible for the operation and maintenance of the physical facilities and grounds.
- X. Functional Performance Test (FPT): Test of the dynamic function and operation of equipment and systems using, simulations, manual (direct observation) and/or monitoring methods. Systems are tested under various modes. The systems are run through all the control system's sequences of operation and components are verified to be responding as intended per the specified sequence of operations. FPTs are performed after pre-functional checklists and startup is complete and are performed by the contractor and witnessed by the CxA.
- Y. Installation Verification: Observations or inspections that confirm the system or component has been installed in accordance with the contract documents and to industry accepted best practices.
- Z. Integrated System Testing: Integrated Systems Testing procedures entail testing of multiple integrated system's performance to verify proper functional interface between systems. Typical Integrated Systems Testing includes verifying that building systems respond properly to loss of utility, transfer to emergency power sources, re-transfer from emergency power source to normal utility source; interface between HVAC controls and Fire Alarm systems for equipment shutdown, interface between Fire Alarm system and elevator control systems for elevator recall and shutdown; interface between Fire Alarm System and Security Access Control Systems to control access to spaces during fire alarm conditions; and other similar tests as determined for each specific project.
- AA. Master Issues Log: A formal and ongoing record of problems or concerns, and their resolution, that have been raised by members of the commissioning team during the course of the commissioning process. Maintained by the CxA.
- BB. Monitoring: The recording of equipment operation parameters (flow, current, status, pressure, etc.) using data loggers or the trending capabilities of control systems.
- CC. Owner's Project Requirements (OPR): A collection of documents that details the functional requirements of Project and expectations of how it will be used and operated. This document includes Project and design goals, measurable performance criteria, budgets, schedules, success criteria, and supporting information.
- DD. Owner: Project Owner or designated representative.
- EE. Owner-Contracted Tests: Tests paid for by the Owner outside the Contract and for which the CxA does not oversee. These tests will not be repeated during functional tests if properly documented.

- FF. Overwritten Value: Writing over a sensor value in the control system to see the response of a system (e.g., changing the outside air temperature value from 50°F to 75°F to verify economizer operation). See also "Simulated Signal" in 3.3-E-1-C.
- GG. Phased Commissioning: Commissioning that is completed in phases (by floors, for example) due to the size of the structure or other scheduling issues, in order minimize the total construction time.
- HH. Pre-functional Checklists (PFC): Checklists prepared by the CxA, in conjunction with the Subs, and provided to the contractor to document the complete installation of equipment or systems. These checklists are essentially elementary component tests to verify proper installation of equipment and are primarily static inspections and procedures to prepare the equipment or system for initial operation (e.g., belt tension, oil levels OK, labels affixed, gages in place, sensors calibrated, amp readings, etc.) Pre-functional checklists are completed by the contractors prior to or along with the manufacturer's start-up procedure and checklist.
- II. Pre-Functional Test (PFT): An inspection or test that is done before functional testing. PFT's include installation verification and system and component start up tests.
- JJ. Quality Assurance: The application of planned, and systematic methods to verify that quality control procedures are being effectively implemented. This is a set of processes and procedures that ensure a construction project meets quality and performance standards, regulations, and client expectations.
- KK. Quality Control: The process to establish consistency and conformance in project / program work that includes the continuous review, certification, inspection, and testing of project / program components including persons, systems, materials, documents, techniques, and workmanship to determine whether such components conform to the plans, specifications, applicable standards, and project / program requirements.
- LL. Sampling: Functionally testing only a fraction of the total number of identical or near identical pieces of equipment.
- MM. Seasonal Performance Tests: Functional Tests that are deferred until the system(s) will experience conditions closer to their design conditions.
- NN. Site Observation Visit: On-site inspections and observations made by the Commissioning Agent for the purpose of verifying component, equipment, and system installation, to observe contractor testing, equipment start-up procedures, or other purposes.
- OO. Start-up: The initial starting or activating of dynamic equipment or the initial energization and programming of control systems.
- PP. Systems Manual: A system-focused composite document that includes summary information required for the owners / operators to maintain and operate the system(s).
- QQ. Systems, Subsystems, and Equipment: Where these terms are used together or separately, they shall mean "as-built" systems, subsystems, and equipment.
- RR. Test, Adjust, Balance (TAB): A systematic process or service applied to heating, ventilating, and air-conditioning (HVAC) systems and other environmental systems to achieve and document air and hydronic flow rates. The standards and procedures for providing these services are referred to as "Testing, Adjusting, and Balancing" and are described in the Procedural Standards for the Testing, Adjusting and Balancing of Environmental Systems, published by NEBB or AABC.
- SS. Test Procedures: Written details developed by the CxA, and included in the FPTs, that details the expectations for tests conducted on components, equipment, assemblies, systems, and interfaces among systems.
- TT. Trends / Trending: Recordings of control point value history or monitoring value history over time. Trends are automatically recorded by the building automation system or other electronic data gathering equipment. Trend data gathered over a period of time is often used to analyze and verify proper performance of equipment, systems, or sequence of operations.
- UU. Training Plan: A written document that details the expectations, schedule and deliverables of commissioning process activities related to training of project operating and maintenance personnel, users and occupants.

- VV. Trending: The monitoring by a building management system or other electronic data gathering equipment and analyzing of the data gathered over a period of time to verify proper equipment or systems sequence of operations.
- WW. Warranty Phase Commissioning: Warranty Phase Commissioning efforts are executed approximately 10 months. after a project has been completed and accepted by the Owner is This Commissioning phase may include verification of system performance, measurement and verification tasks and assistance in identifying warranty issues and enforcing warranty provisions of the construction contract. See the Warranty section of this document for additional information.
- XX. Warranty Visit: A commissioning meeting and site review where all outstanding warranty issues and deferred testing is reviewed and discussed.

1.4 COMPENSATION

- A. If the Commissioning Authority is required to perform additional services or incur additional expenses due to actions of the Contractor as listed below the Contractor agrees to compensate the Owner for such additional services and expenses.
 - 1. Failure to provide timely notice of commissioning activities schedule changes.
 - 2. Failure to meet acceptance criteria for test demonstrations.
 - 3. Additional work required by the CxA to coordinate and correct commissioning issues.
 - 4. Additional work required to coordinate and repeat tests when equipment and systems fail initial acceptance criteria testing.
 - 5. See 3.11 Exhibit A: Commissioning Readiness Letter (CxRL).
- B. Contractor shall compensate Owner for such additional services and expenses at the rate of \$250.00 per labor hour, plus travel and per diem allowances for meals and lodging according to current U.S. General Services Administration (GSA) Per Diem Rates for the project area for the applicable fiscal year and month(s).

1.5 COMMISSIONING TEAM INTERACTION & PROCESS

- A. A project team will be created to coordinate the commissioning effort. This team will coordinate and communicate with the rest of the project team, attend meetings, and solve problems. This team includes representatives from the contractor, subcontractors, and owner.
- B. The prime contractor shall in addition to their representative also appoint a representative from each subcontractor involved in commissioned systems including mechanical, electrical, controls, test adjust balance, and plumbing systems.
- C. With these fundamental practices in mind, the commissioning process described herein has been developed to recognize that, in the execution of the Commissioning Process, the Commissioning Agent must develop effective methods to communicate with every member of the construction team involved in delivering commissioned systems while simultaneously respecting the exclusive contract authority of the Construction Project Manager (CM). Thus, the procedures outlined in this specification must be executed within the following limitations:
 - 1. No communications (verbal or written) from the Commissioning Agent shall be deemed to constitute direction that modifies the terms of any contract between the Owner and the Contractor.
 - 2. Commissioning Issues identified by the Commissioning Agent will be delivered to the Construction Manager and copied to the designated Commissioning Representatives for the Contractor and subcontractors on the Commissioning Team for information only in order to expedite the communication process. These issues must be understood as the professional opinion of the Commissioning Agent and as suggestions for resolution.
 - 3. In the event that any Commissioning Issues and suggested resolutions are deemed by the Construction Manager to require either an official interpretation of the construction documents or require a modification of the contract documents, the Construction Manager will issue an official directive to this effect.
 - 4. All parties to the Commissioning Process shall be individually responsible for alerting the Construction Manager of any issues that they deem to constitute a potential contract change prior to acting on these issues.

5. Authority for resolution or modification of design and construction issues rests solely with the Construction Manager, with appropriate technical guidance from the Architect/Engineer and/or Commissioning Agent.

1.6 OWNER'S RESPONSIBILITIES

- A. Participate in resolution of issues that may occur as a result of the commissioning process.
- B. Assign operation and maintenance personnel and schedule them to participate in commissioning team activities including, but not limited to, the following:
 1. Coordination meetings.
 2. Training in operation and maintenance of systems, subsystems, and equipment.
 3. Testing meetings.
 4. Demonstration of operation of systems, subsystems, and equipment.
 5. Provide feedback to CxA for the project warranty phase testing and review, as well as access to the site and controls system during the warranty test.

1.7 COMMISSIONING COORDINATION RESPONSIBILITIES

- A. Contractor's and Subcontractor's Responsibilities
 1. Provide utility services required for the commissioning process.
 2. Contractor is responsible for construction means, methods, job safety, or management function related to commissioning on the job site.
 3. Contractor shall assign representatives with expertise and authority to act on behalf of the Contractor and schedule them to participate in and perform commissioning team activities including, but not limited to, the following:
 - a. Participate in construction-phase commissioning meetings including controls coordination meeting to review and resolve any issues with the sequence of operations.
 - b. Participate in maintenance orientation and inspection.
 - c. Participate in operation and maintenance training sessions.
 - d. Certify that Work is complete and systems are operational according to the Contract Documents, including calibration of instrumentation and controls.
 - e. Perform quality control of all work and certify it is complete prior to request for inspection.
 - f. Evaluate performance deficiencies identified in test reports and, in collaboration with entity responsible for system and equipment installation, recommend corrective action.
 4. Contractor shall integrate all commissioning activities into Contractor's master construction schedule.
 5. Contractor shall provide a means to effectively commission the BMS system including the following at minimum:
 - a. Schedule the controls contractor that was an integral part of programming the building BMS to run the tests
 - b. Provide a table with chairs
 - c. Provide a 17" 1080p monitor with 10' cables for connection to the controls contractor's laptop.
 6. Subcontractors shall assign representatives with expertise and authority to act on behalf of subcontractors and schedule them to participate in and perform commissioning team activities including, but not limited to, the following:
 - a. Participate in construction-phase coordination meetings.
 - b. Participate in maintenance orientation and inspection.
 - c. Complete pre-functional checklists for all equipment. Submit completed forms with start-up reports immediately after start up.
 - d. Schedule and perform duct air leakage testing as specified in the technical specification sections. Make testing available for CxA to witness, and provide testing reports to CxA.
 - e. Provide flushing plans, disinfection reports and water treatment reports to the CxA for review.
 - f. Participate in pre-TAB meeting and jobsite inspections to verify TAB readiness.
 - g. Provide draft completed TAB report to CxA for review. CxA will identify up to 20% of TAB report for TAB contractor to demonstrate compliance to the completed TAB report.

- h. Participate in procedures meeting for testing.
 - i. Perform point-to-point, calibration and checkout of the building automation system and provide completed report to the CxA for review.
 - j. Participate in final review at acceptance meeting.
 - k. Provide schedule for operation and maintenance data submittals, equipment startup, and testing to CxA for incorporation into the commissioning plan. Update schedule on a weekly basis throughout the construction period.
 - l. Provide information to the CxA for developing construction-phase commissioning plan.
 - m. Participate in training sessions for operation and maintenance personnel.
 - n. Verify that all systems function correctly by testing each mode of operation, alarm and system function.
 - o. Gather and submit operation and maintenance data for systems, subsystems, and equipment to the CxA, as specified.
 - p. Perform quality control of all work and certify it is complete prior to request for inspection.
 - q. Complete and sign Commissioning Readiness Letter (CxRL) and provide to CxA (See EXHIBIT A of this specification section).
 - r. Provide technicians who are familiar with the construction and operation of installed systems and who shall develop specific test procedures and participate in testing of installed systems, subsystems, and equipment.
 - s. Perform seasonal testing, at the direction of the CxA, to prove functional performance of the HVAC and controls in the opposite season.
- B. Architect and Design Engineer Responsibilities
- 1. Responsible for developing the construction contract documents and clarifying the design intent during the construction phase of the project.
 - 2. Performs construction observation.
 - 3. Contracted directly to OWNER.
- C. CxA's Responsibilities
- 1. Organize and lead the commissioning team.
 - 2. Prepare a Commissioning Plan. Collaborate with design team, owner, contractor and subcontractors to develop test and inspection procedures. Identify commissioning team member responsibilities, by name, firm, and trade specialty, for performance of each commissioning task.
 - 3. Work with the Contractor to schedule commissioning activities. The Contractor shall integrate all commissioning activities into the master construction schedule. All parties will address scheduling issues in a timely manner in order to expedite the commissioning process.
 - 4. Review and comment on submittals for compliance with the approved project documents and identify any potential conflicts.
 - 5. Conduct commissioning team meetings for the purpose of coordination, communication, and conflict resolution; discuss progress of the commissioning processes. The CxA shall prepare and distribute minutes to commissioning team members and attendees within five (5) workdays of the commissioning meeting.
 - 6. At the beginning of the construction phase, conduct an initial construction-phase coordination meeting for the purpose of reviewing the commissioning activities and establishing tentative schedules for permanent power; operation and maintenance data submittals; operation and maintenance training sessions; TAB Work; and Project completion.
 - 7. Periodically observe and inspect construction and report progress and deficiencies. In addition to compliance with the Contract Documents, inspect systems and equipment installation for adequate accessibility for maintenance and component replacement or repair.
 - 8. Prepare Project-specific pre-functional checklists and functional test procedures checklists..
 - 9. Compile test data, inspection reports, and certificates and include them in the systems manual and commissioning report.
 - 10. Review and comment on operation and maintenance documentation for compliance with the Contract Documents. Operation and maintenance documentation requirements are specified in Division 01 Section "Operation and Maintenance Data."
 - 11. Review Contractor's operation and maintenance training program. Operation and maintenance training is specified in Division 01 Section "Demonstration and Training."
 - 12. Prepare commissioning status reports.
 - 13. Assemble the final commissioning documentation, including the Commissioning Report including applicable Project Record Documents.

1.8 COMMISSIONING DOCUMENTATION

- A. Commissioning Plan: A document, prepared by CxA, that outlines the process, schedule, allocation of resources, and documentation requirements of the commissioning effort, and shall include, but is not limited to the following:
1. Description of the organization, layout, and content of commissioning documentation to be provided along with identification of responsible parties.
 2. Identification of systems and equipment to be commissioned.
 3. Description of the level of commissioning for each system
 4. Description of schedules for testing procedures along with identification of parties involved in performing and verifying tests.
 5. Identification of items that must be completed before the next operation can proceed.
 6. Description of responsibilities of commissioning team members.
 7. Description of observations to be made.
 8. Description of requirements for operation and maintenance training, including required training materials.
 9. Provide a schedule for commissioning activities with specific dates coordinated with overall construction schedule.
 10. Define the process for completing pre-functional and startup checklists for systems, subsystems, and list of specific equipment requiring these checklists.
 11. Include Step-by-Step procedures for Functional Testing of systems, subsystems, and equipment with descriptions for methods of verifying relevant data, recording the results obtained, and listing parties involved in performing and verifying tests.
- B. Pre-Functional Checklists: CxA shall develop pre-functional checklists for all equipment to be commissioned. Pre-Functional Checklists shall be completed and signed by the Contractor, verifying that systems, subsystems, equipment, and associated controls are ready for testing. The Commissioning Agent may spot check Pre-Functional Checklists to verify accuracy and readiness for testing. Inaccurate or incomplete Pre-Functional Checklists shall be returned to the Contractor for correction and resubmission.
- C. Site Visit Reports: CxA shall record test data, observations, and measurements on site visit forms. Updated Issues Log, photographs and other means appropriate for the application shall be included with Report.
- D. Start-Up Reports: Contractor/Manufacturer created forms that document that factory start-up procedures have been followed for all equipment and systems to be commissioned. Provided by sub-contractors.
- E. Functional Performance Testing: CxA shall develop functional performance test procedures for all equipment and systems to be commissioned. Site Visit Reports: CxA shall record test data, observations, and measurements on site visit forms. Photographs and other means appropriate for the application shall be included with data.
- F. Test and Inspection Reports: CxA shall compile test and inspection reports and test and inspection certificates and include them in Systems Manual and commissioning report.
- G. Commissioning Schedule: CxA shall review and provide input to the master project and construction schedules for commissioning activities.
- H. Issues Log: CxA shall prepare and maintain an issues log that describes installation, and performance issues that are at variance with the Contract Documents. CxA will identify and track issues as they are encountered, documenting the status of unresolved and resolved issues.
1. Creating an Issues Log Entry:
 - a. Identify the issue with unique numeric or alphanumeric identifier by which the issue may be tracked.
 - b. Assign a descriptive title of the issue.
 - c. Identify issue date.
 - d. Identify test number of test being performed at the time of the observation, if applicable, for cross-reference.
 - e. Identify system, subsystem, and equipment to which the issue applies.
 - f. Identify location of system, subsystem, and equipment.
 - g. Include information that may be helpful in diagnosing or evaluating the issue.
 - h. Note recommended corrective action.

- i. Identify commissioning team member responsible for corrective action.
 - j. Identify expected date of correction.
 - k. Identify person documenting the issue.
 2. Documenting Issue Resolution:
 - a. Log date correction is completed or the issue is resolved.
 - b. Describe corrective action or resolution taken. Include description of diagnostic steps taken to determine root cause of the issue, if any.
 - c. Identify changes to the Contract Documents that may require action, if any.
 - d. State that correction was completed and system, subsystem, and equipment are ready for retest, if applicable.
 - e. Identify person(s) who corrected or resolved the issue.
 - f. Identify person(s) documenting the issue resolution.
- I. Commissioning Report: CxA shall document results of the commissioning process including performance of systems, subsystems, equipment and issues. The commissioning report shall indicate whether systems, subsystems, and equipment have been completed and are performing according to the OPR, BOD and Contract Documents. The commissioning report shall include, but is not limited to, the following:
 1. Discussion of performance of commissioned systems including any variance from OPR, BOD and the Contract Documents; record of conditions; and, if appropriate, recommendations for resolution. This report shall be used to evaluate systems, subsystems, and equipment and shall serve as a future reference document during OWNER occupancy and operation. It may also include a recommendation for accepting or rejecting systems, subsystems, and equipment.
 2. Commissioning Plan.
 3. Testing plans and reports.
 4. Issues log.
 5. Completed test checklists.
 6. Listing of off-season test(s) not performed and a schedule for their completion.
- J. Systems Manual: CxA shall gather required information and compile Systems Manual. Systems manual shall include, but is not limited to, the following:
 1. As-built system narratives, schematics, and list of installed equipment
 2. Operation and maintenance data

1.9 CXA SUBMITTALS

- A. Commissioning Plan: CxA shall submit a draft commissioning plan. Deliver one copy to Contractor and one to OWNER. Present submittal in sufficient detail to evaluate data collection and arrangement process. One copy, with review comments, will be returned to the CxA for preparation of the final commissioning plan.
- B. Pre-functional Checklists: CxA shall submit sample checklists and forms to Contractor and subcontractors for review, comment and approval. Contractor completed prefunctional checklists are required to be submitted for review and approved prior to proceeding with functional performance testing.
- C. Functional Test Plan: CxA shall submit draft Functional Test Plan and checklists for comment. The final Functional Test Plan will be submitted and used for functional testing.
- D. Site visit reports: CxA shall submit site visit reports as they are created.
- E. Final Commissioning Report: CxA shall submit the draft commissioning report. One copy, with review comments, will be returned to the CxA for preparation of final submittal. The final report submittal must address previous review comments.
- F. The CxA will provide appropriate contractors with a specific request for the type of submittal documentation the CxA requires facilitating the commissioning work. These requests will be integrated into the normal submittal process and protocol of the construction team. At minimum the request will include the manufacturer and model number, the manufacturer printed installation and detailed start-up procedures, sequences of operation, O&M data, performance data, any performance test procedures, control drawings and details. In addition, the factory checkout sheets or field technicians' reports shall be submitted for review

1.10 COORDINATION

- A. Scheduling: The Contractor shall work with the Commissioning Agent to incorporate the commissioning activities into the construction schedule. The Commissioning Agent will provide sufficient information (including, but not limited to, tasks, durations and predecessors) on commissioning activities to allow the Contractor to schedule commissioning activities. All parties shall address scheduling issues and make necessary notifications in a timely manner in order to expedite the project and the commissioning process. The Contractor shall update the Master Construction schedule as directed by the Owner.
- B. Coordinating Meetings: CxA shall conduct coordination meetings of the commissioning team as needed to review progress on the commissioning plan, to discuss scheduling conflicts, and to discuss upcoming commissioning process activities.
- C. Pretesting Meetings: CxA shall conduct pretest meetings with the commissioning team to review startup reports, coordinate controls sequence of operations, review pretest inspection results, review testing and balancing procedures, review testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested.
- D. Testing Coordination: CxA shall coordinate with the OWNER and Contractor to plan the sequence of testing activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
 - 1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- E. The Subcontractors shall provide sufficient notice to the CxA (2 weeks minimum) regarding their completion schedule for the pre-functional checklists and startup of all equipment and systems. The contractor will use the Commissioning Readiness Letter (CxRL) in EXHIBIT A to notify the CxA that the systems are ready.
- F. General
 - 1. Functional testing is conducted after pre-functional testing and startup has been satisfactorily completed.
 - 2. The BAS is sufficiently tested and approved by the CxA before it is used for TAB or to verify performance of other components or systems.
 - 3. The air and water balancing is complete and approved before functional testing of air-related or water-related equipment or systems.
 - 4. Testing proceeds from components to subsystems to systems.
 - 5. When the proper performance of all interacting, individual systems has been achieved, the interface or coordinated responses between systems is checked.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT AND DOCUMENTATION, INSTRUMENTATION AND TOOLS

- A. Test equipment and instrumentation required to perform the commissioning shall remain the property of Contractor unless otherwise indicated.
- B. Test equipment and instrumentation required to perform commissioning shall comply with the following criteria:
 - 1. Be manufactured for the purpose of testing and measuring tests for which they are being used and have an accuracy to test and measure system performance within the tolerances required to determine acceptable performance.
 - 2. Calibrated and certified.
 - a. Calibration performed and documented by a qualified calibration agency according to national standards applicable to the tools and instrumentation being calibrated. Calibration shall be current according to national standards or within test equipment and instrumentation manufacturer's recommended intervals, whichever is more frequent, but not less than within Six [6] months of initial use on Project. Calibration tags permanently affixed.

- b. Repair and recalibrate test equipment and instrumentation if dismantled, dropped, or damaged since last calibrated.
3. Maintain test equipment and instrumentation.
4. Use test equipment and instrumentation only for testing or monitoring Work for which they are designed.

PART 3 - EXECUTION

3.1 SUBMITTALS

- A. The CxA shall provide the Design Builder with a specific request for the type of submittal documentation required to facilitate the commissioning work. These requests shall be integrated into the submittal process and protocol of the project.
- B. The submittal shall be reviewed and approved by the Design Builder's design team prior to being submittal to the CxA.
- C. At minimum, the submittal request shall include:
 1. Equipment manufacturer and model number.
 2. Selection and operating data (Example: Flows, pressures, temperatures, fan curves, etc.).
 3. The manufacturer's printed installation and detailed start-up procedures.
 4. Full sequences of operation and control drawings.
 5. O&M data, performance data, performance test procedures, details, and results of owner-contracted tests.
 6. Installation and checkout materials that are shipped inside the equipment and the manufacturer field checkout sheet forms to be used by the factory or field technicians.
- D. The CxA shall review and approve submittals related to the commissioned equipment for conformance to the Owner Project Requirements, Design documents and as it relates to the commissioning process, the functional performance of the equipment, completeness and adequacy for developing test procedures.
- E. The CxA's review is intended to aid in the development of functional testing procedures and to verify compliance with equipment specifications. The Commissioning authority shall notify the Owner and the DBB of items missing or areas that are not in conformance with contract documents or Owner Project Requirements and which require resubmission.
- F. The CxA may request additional design narrative from the A/E and Controls Contractor, depending on the completeness of the basis of design documentation and sequences provided with the design document Specifications.
- G. These submittals to the CxA do not constitute compliance for O&M manual documentation. The O&M manuals are the responsibility of the Design Bid Builder, though the CxA will review and approve them.

3.2 PRE-FUNCTIONAL CHECKLISTS AND FACTORY START UP REPORTS

- A. The following procedures apply to all equipment to be commissioned.
- B. Pre-functional Checklists are developed by the CxA and completed by the appropriate installing contractors for all major equipment and systems being commissioned before functional testing can begin. The checklist captures equipment nameplate and characteristics data, confirming the as-built status of the equipment or system. These checklists also ensure that the systems are complete and operational, so that the functional performance testing can be scheduled. The Contractor and vendors shall execute factory startup and provide the CxA with a copy of the signed and dated completed start-up checklists which will be submitted with the Pre-Functional checklists.
- C. Startup and Initial Checkout Plan: The Contractor shall develop detailed startup plans for all equipment. The primary role of the Contractor in this process is to ensure that there is written documentation that each of the manufacturer recommended procedures have been followed and completed. Parties responsible for startup shall be identified in the Startup Plan and in the checklist forms.
 1. The full startup plan shall at a minimum consist of the following items:
 - a. The Pre-Functional Checklists.

- b. The manufacturer's standard written startup procedures copied from the installation manuals with check boxes by each procedure and a signature block added by hand at the end.
 - c. The manufacturer's normally used field checkout sheets.
 - D. The Commissioning Agent will review/approve the full start-up plan.
 - E. Execution of Pre-functional Checklists and Startup.
 - 1. Pre-Functional checklists will be provided to the project site by the CxA.
 - 2. The contractor shall maintain a master copy of signed checklists.
 - 3. The installing contractors shall update the checklists as work is completed. Only individuals that have direct knowledge and witnessed that a line-item task on the pre-functional checklist was actually performed shall initial or check that item off.
 - 4. The CxA will periodically review the checklists for completeness and report on progress at the Cx meetings.
 - F. BAS Startup Testing, Adjusting, and Calibration
 - 1. Work and/or systems installed under this Division shall be fully functioning prior to Demonstration and Acceptance Phase. Contractor shall start, test, adjust, and calibrate all work and/or systems under this Contract, as described below:
 - a. Inspect the installation of all devices. Review the manufacturer's installation instructions and validate that the device is installed in accordance.
 - b. Verify proper electrical voltages and amperages, and verify that all circuits are free from faults.
 - c. Verify integrity/safety of all electrical connections.
 - d. Coordinate with TAB subcontractor to fine tune control settings that are determined from balancing and testing procedures. Record the following control settings as obtained from TAB contractor, and note any TAB deficiencies in the BAS, Pre-functional checklists and initiate an associated Action Item:
 - 1) Optimum duct static pressure setpoints for VAV air handling units.
 - 2) Minimum outside air damper settings for air handling units.
 - 3) Optimum differential pressure setpoints for variable speed pumping systems.
 - 4) Calibration parameters for flow control devices such as VAV boxes and flow measuring stations.
 - 5) BAS contractor shall provide access to the front end Building Automation System as a minimum to the TAB and CxA to facilitate calibration. Connection for any given device shall local to it (i.e.: at the VAV box or at the thermostat). Shall be made at front end and shall allow querying and editing of parameters required for proper calibration and start up.
 - e. Test, calibrate, and set all digital and analog sensing, and actuating devices. Calibrate each instrumentation device by making a comparison between the BAS display and the reading at the device, using an instrument traceable to the National Bureau of Standards, which shall be at least twice as accurate as the device to be calibrated (e.g., if field device is +/- 0.5% accurate, test equipment shall be +/-0.25% accurate over same range). Record the measured value and displayed value for each device in the BAS Pre-functional Report.
 - f. Check each digital control point by making a comparison between the control command at the controller and the status of the controlled device. Check each digital input point by making a comparison of the state of the sensing device and the operator interface display. Record the results for each device in the BAS Pre-functional checklists.
 - g. Verify proper sequences by using the approved checklists to record results and submit with BAS Pre-functional checklists. Verify proper sequence and operation of all specified functions. There is inherent duplication between the functional performance testing of the Testing Contractor, and the thorough checking testing of the sequences by the BAS. Generally, the sequence checkouts indicated as the responsibility of the Testing Contractor under functional testing, must first be tested by the BAS under prefunctional testing.
 - h. Verify proper systems operation under emergency power. Cooperate and coordinate with Testing Contractor and CxA for comprehensive building power outage tests.
 - i. Verify all safety devices trip at appropriate conditions. Adjust setpoints accordingly.
 - j. Verify that all alarm thresholds for all analog devices are entered. Request direction from Owner as to alarm threshold parameters.

- k. Tune all control loops to obtain the fastest stable response without hunting, offset or overshoot. Record tuning parameters and response test results for each control loop in the BAS Prefunctional Report. Except from a startup, maximum allowable variance from set point for controlled variables under normal load fluctuations shall be as follows. Within 2 minutes of any upset (for which the system has the capability to respond to) in the control loop, tolerances shall be maintained (exceptions noted):
 - 1) Duct air temperature: $\pm 1^{\circ}\text{F}$.
 - 2) Space Temperature: $\pm 2^{\circ}\text{F}$
 - 3) Hot water temperature: $\pm 2^{\circ}\text{F}$.
 - 4) Duct pressure: $\pm 0.25''$ w.g.
 - 5) Water pressure: ± 1 psig
 - 6) Air flow control: $\pm 5\%$ of setpoint velocity. For min OA flow loops being reset from CO₂, response to upset max time is one hour
 - 7) Space Pressurization (on active control systems): $\pm 0.02''$ w.g. with no door or window movements
- G. For interface and DDC control panels:
 1. Ensure devices are properly installed with adequate clearance for maintenance and clearly labeled in accordance with the record drawings
 2. Ensure terminations are safe, secure and labeled in accordance with the record drawings
 3. Check power supplies for proper voltage ranges and loading.
 4. Ensure wiring and tubing are run in a neat and workman-like manner, either bound or enclosed in trough.
 5. Check for adequate signal strength on communication networks.
 6. Check for stand-alone performance of controllers by disconnecting the controller from the LAN. Verify the event is enunciated at operator interfaces. Verify that the controlling LAN reconfigures as specified in the event of a LAN disconnection.
 7. Ensure that controller memory and control network through-put are adequate to support the extensive trending requirements. Reconfigure the system to provide a reliable and robust system as necessary.
 8. Ensure all outputs and devices fail to their proper positions/states.
 9. Ensure buffered and/ or volatile information is held through power outage.
 10. With all system and communications operating normally, sample and record update/enunciation times for critical alarms fed from the panel to the operator interface.
 11. Check for adequate grounding of all DDC panels and devices.
- H. Meters
 1. All meters (Electric, Gas, Water) calibration will be verified in the field after installation.
 2. All Meters will be verified by the contractor to be reporting correctly; including – correct units, intervals, and trending back to the DDC controls system operator workstation graphics.
- I. For Operator Interfaces:
 1. Verify all elements on the graphics are functional and properly bound to physical devices and/or virtual points and that hot links or page jumps are functional and logical.
 2. Output all specified system reports for review and approval.
 3. Verify the alarm printing and logging is functional and per requirements
 4. Verify trend archiving to disk and provide a sample to the CxA for review.
 5. Verify paging/dial out alarm enunciation is functional.
 6. Verify functionality of remote operator interfaces and that a robust connection can be established consistently.
 7. Verify that required third party software applications required with the bid are installed and functional.
 8. Verify proper interface with fire alarm system.
- J. Submit Start-Up Test Report. Report shall be completed, submitted and approved prior to functional testing.
- K. Deficiencies, Non-Conformance and Approval in Checklists and Startup.
 1. The Contractor shall clearly list any outstanding items of the initial start-up and pre-functional procedures that were not completed successfully, at the bottom of the procedures form or on an

- attached sheet. The procedures form and any outstanding deficiencies are provided to the CxA within two days of test completion.
2. The CxA reviews the report and reports to the OWNER. The CxA shall work with the Contractor and vendors to correct and retest deficiencies or uncompleted items.

3.3 FUNCTIONAL PERFORMANCE TESTING

A. Common Elements for All Systems

1. Have the required submitted documentation convenient to testing area. Validate that all required documentation has been submitted and is per the contract requirements (very cursory review). CxA shall review the content of the documentation and validate that it is per contract documents.
2. CxA shall review the startup documentation at the start of functional performance testing. Review the startup tests and checklist documentation. CxA shall validate that startup is acceptably executed and complete. CxA shall ensure that any items indicated as outstanding in the checklists is entered as an Action Item and enter one if it is not. The checklists and start up tests/measurements shall be spot checked at the beginning of FPT to ensure accuracy. CxA shall complete a test that indicates he has reviewed the prefunctional checklists and finds them acceptable and note any outstanding items.
3. CxA shall check for and as applicable direct Contractor to demonstrate that access is sufficient to perform required maintenance.
4. CxA shall validate that all prerequisite work is complete and confirm via a test record that the CxA feels it is.
5. Specifically check labeling and ensure conformance to contract requirements.
6. Check proof indication, alarming on failure and restart/acknowledgement as applicable.
7. CxA shall observe operating conditions encountered at the start of FPT. CxA shall examine for normal functionality and record parameters as a test.
8. All dynamic systems powered by electricity shall be tested to simulate a power outage to ensure proper sequencing. Those on emergency power or uninterruptible power shall be tested on all sources.
9. CxA shall inspect the installation and compare it to contract requirements. Record the inspection as a test.
10. Capacities and adjusted and balanced conditions as applicable will generally be checked.
11. Verify all sequence modes and sequences of operation. CxA must initiate all modes and may not refer to or rely on a prefunctional test done by the BAS. Some examples of generic modes that apply to most systems include:
 - a. Off Mode
 - b. Failed Mode: Proof, safeties, power outage etc. See below for stress testing.
 - c. Start Sequence in various modes
 - d. Stop sequences in various modes
12. All adjusted, balanced, controlled systems shall be assessed to determine the optimal setting for the system as applicable. The optimal settings should be determined to establish reliable, efficient, safe and stable operation. CxA is responsible for placing systems in optimal condition for occupancy and not simply relying on initial design estimated settings. For adjustable setpoints, the team will document the conditions at the end of FPTs. The contractors will use RFIs / ACDs to confirm any deviations from the design.
13. Dynamic Graphics: The graphic for all components, systems, and areas sampled and required to be represented by a graphic shall be checked for adequacy and accuracy. Furthermore, when setpoints are required to be adjustable, verify that they can be adjusted directly from the graphic screen.
14. All interfaces between two systems or equipment of different manufacturers must be checked for accuracy and functionality.
15. "Stress Testing": CxA shall analyze systems to identify possible conditions where functionality may be compromised. CxA shall design non-destructive tests that will demonstrate either the automated response to the conditions or so that team can identify the best method for responding or fixing the condition. All tests and findings shall be documented.

- #### B. Objectives and Scope.
- The objective of functional performance testing is to demonstrate that each system is operating according to the Contract Documents. Each system will be tested to verify that the system response is as designed. HVAC systems will be checked for conformance to the design sequences of operation and stable control, lighting control will be checked in each type of lighting area,

- security system cameras will be verified functional and able to see the correct areas. Proper system responses to such conditions as power failure, out of limit condition, equipment failure, etc. shall also be tested.
- C. Early duct air leakage tests shall be performed as specified to ensure green and building code compliance. Make testing available for CxA to witness, and provide testing reports to CxA. Point-to-point testing will be performed by controls contractor on all applicable systems, with results given to CxA prior to functional performance testing.
- D. Development of Test Procedures: The test procedures are written by the CxA based upon the final operational sequences from available project documentation. The CxA shall develop specific test procedures and forms to verify and document proper operation of each system. Prior to execution, the CxA shall provide a copy of the test procedures to the Contractor who shall review the tests for feasibility, safety, equipment and warranty protection. The test procedure checklists developed by the CxA shall include the following information:
1. System and equipment or component name(s).
 2. Equipment location and ID number.
 3. Date.
 4. Project name.
 5. Participating parties.
 6. Reference to the specification section describing the test requirements, if applicable.
 7. A copy of the specific sequence of operations.
 8. Prerequisites for the test.
 9. Special cautions, alarm limits, etc.
 10. Specific step-by-step procedures to execute the test.
 11. Acceptance criteria of proper performance with a Yes / No/NA check box.
 12. A section for comments.
- E. Test Methods.
1. Systems Functional Performance Testing shall be achieved by manual testing (i.e., persons manipulate the equipment and observe performance) and/or by monitoring the performance and analyzing the results using the control system's trend log capabilities or by standalone data loggers. The Contractor and Commissioning Agent shall determine which method is most appropriate for tests that do not have a method specified.
 - a. Simulated Conditions: Simulating conditions (not by an overwritten value) shall be allowed, although timing the testing to experience actual conditions is encouraged wherever practical.
 - b. Overwritten Values: Overwriting sensor values to simulate a condition, such as overwriting the outside air temperature reading in a control system to be something other than it really is, shall be allowed, but shall be used with caution and avoided when possible. Such testing methods often can only test a part of a system, as the interactions and responses of other systems will be erroneous or not applicable. Simulating a condition is preferable. e.g., for the above case, by heating the outside air sensor with a hair blower rather than overwriting the value or by altering the appropriate setpoint to see the desired response. Before simulating conditions or overwriting values, sensors, transducers and devices shall have been calibrated.
 - c. Simulated Signals: Using a signal generator which creates a simulated signal to test and calibrate transducers and DDC constants is generally recommended over using the sensor to act as the signal generator via simulated conditions or overwritten values.
 - d. Altering Setpoints: Rather than overwriting sensor values, and when simulating conditions is difficult, altering setpoints to test a sequence is acceptable. . For example, to see the Air Conditioning compressor lockout initiate at an outside air temperature below 54 F (12 C), when the outside air temperature is above 54 F (12 C), temporarily change the lockout setpoint to be 4 F (2 C) above the current outside air temperature.
 - e. Indirect Indicators: Relying on indirect indicators for responses or performance shall be allowed only after visually and directly verifying and documenting, over the range of the tested parameters, that the indirect readings through the control system represent actual conditions and responses. Much of this verification shall be completed during systems startup and initial checkout

2. Functional testing is performed by the contractors with the method and degree of testing as defined in this specification for each system. Each function and test shall be performed under conditions that simulate actual conditions as close as is practically possible. The Contractor executing the test shall provide all necessary materials, system modifications, etc. to produce the necessary flows, pressures, temperatures, etc. necessary to execute the test according to the specified conditions. At completion of the test, the Contractor shall return all affected building equipment and systems to their pre-test condition.
3. Multiple identical pieces of equipment may be functionally tested using a sampling strategy. The sampling strategy will be defined in these specifications with the commissioned systems list.

- F. Coordination and Scheduling: See the *COORDINATION* section for coordination and scheduling details.
- G. Problem Solving: The CxA will recommend solutions to problems found; however, the burden of responsibility to solve, correct and retest problems is with the Contractor and Owner's consultants.

3.4 OPERATION AND MAINTENANCE TRAINING REQUIREMENTS

- A. Before the operation and maintenance training, CxA shall review training preparation for compliance with project documents.
- B. Training is required per contract specifications. At a minimum, training is required for Mechanical systems, Lighting, and Controls systems.
- C. The CxA requires submission of training records including attendance lists to verify appropriate people received the training.

3.5 GENERAL WARRANTY REQUIREMENTS

- A. Coordinate MEP Contractor Call-back and Warranty Enforcement.
 1. Perform review of commissioned systems:
 - a. Timed at approximately 2 months prior to the expiration of the project warranty period.
 - b. Project warranties have a typical duration of 12 months. Verify for this project.
 - c. The Warranty Period walk through inspection for the commissioned systems would then be typically scheduled at 10 months and should include representatives from the Owner, A/E, Facilities Management, CM, GC, subcontractors and manufacturers.

3.6 MEP Cx WARRANTY AND SEASONAL TESTING REQUIREMENTS

- A. The Warranty Phase of a project can incorporate one or both of these two complimentary activities:
 1. Seasonal Testing: Seasonal variation in operations or control strategies may require additional testing during peak cooling and heating seasons to verify systems performance. If the project finishes in the summer, testing of the heating systems may not be effective or conclusive, and can be postponed to colder weather if seasonal testing is included in the scope. The CxA coordinates this activity. Tests are executed and deficiencies corrected by the appropriate subcontractors, witnessed by Owner's staff and the CxA.
 2. Warranty Testing: The CxA will perform an evaluation of the systems in the Cx scope to provide additional experienced review of operation prior to the expiration the warranty. The CxA will request input from the Owner's operations staff and occupants about the performance of the building systems, as well as perform targeted evaluation of systems and controls. Additionally, open items on the Master Issues Log are often reviewed for completion, or significant issues observed during previous phases are evaluated to ensure they are still in a corrected state. A warranty walk review typically is performed onsite. However, videoconference and BMS remote review by the CxA may be arranged in place of the onsite warranty walk.
- B. These two activities often have overlapping scope and intent and will be performed during the same site evaluation(s), where possible.
- C. The warranty period typically begins at the project's Substantial Completion or shortly thereafter.

3.7 COSTS OF COMMISSIONING WORK

- A. The cost to the Contractor and Subcontractors to comply with the specified requirements and to support the work of the CxA shall be included in the Contractor's and Subcontractor's bid price.
- B. It is the Contractor's responsibility to QC and pre-test all building equipment and systems. The CxA shall confirm function of each system. If a device, piece of equipment, sequence, or system fails a test, corrections shall be made immediately and retested.
- C. If at any point in the Commissioning Functional Testing Process, should an issue or failure arise that requires significant time to correct or cannot be corrected immediately during the testing process, that results in a delay or prevents the CxA from completion of the functional testing, incurred costs shall be reimbursed by the Contractor. The associated costs of re-testing are defined in Exhibit A - Commissioning Readiness Letter (CxRL).

3.8 COMMISSIONED SYSTEMS (To be revised with updated Mechanical drawings)

System	Equipment	Level Note
HVAC	Pumps	5
	Heat Exchangers	5
	Energy Recovery Units	5
	Outside Air Ventilation Systems / Dedicated Outside Air System (DOAS)	5
	Supply Fans	3
	Split Systems	3
	Fan Coil Units	3
	Air Cooled Condensing Units (Split and FCU)	3
	Variable Frequency Drives	3
	Exhaust Fans	3
	VAV Air Terminal Units	3
	CAV Air Terminal Units	3
	Test Adjust Balance Report Values	3
Building Management System	Sequences of Operation, Monitored Points, and Alarms	5
	Metering/Monitoring Devices and Equipment	5
	Software Commissioning, GUI Presentation Commissioning, System Access Performance Criteria, Software Tools/Source Code Commissioning, Instrument Data Sheets, Middleware Commissioning, Internet Protocol Commissioning	5
Electrical System	Lighting Systems & Controls (Interior & Exterior & Emergency Functions)	3
	Switchgear & Distribution Panels	2
Plumbing System	Domestic Water Heaters	5
	Industrial Water Heaters	5
	Thermostatic Mixing Valves	5
	HW Circulation Pump	5
Irrigation	Irrigation Controls	5

Testing Levels Defined:

Level 1 - The CxA will request and review equipment installation documentation, periodically observe and review the installation of building systems to verify that the operation meets the Owners Project Requirements.

Level 2 - The CxA will perform Level 1 activities and will witness Contractor performance testing of the system. Contractor shall test systems at the discretion of the CxA to prove operational requirements are met. The test sections shall be chosen at random by the CxA to ensure uniformity of system. Testing failures may result in Level 3 testing.

Level 3 - The CxA will perform Level 2 activities and will witness contractor performance testing of the system. Contractor shall test up to 20% of the system to prove operational requirements are met. The test sections shall be chosen at random by the CxA to ensure uniformity of the system. Failure of any test section shall require retesting of that section and an additional test section equivalent in scope. Coordination will be required to avoid impact to the construction schedule.

Level 4 - The CxA will perform Level 2 activities and will witness contractor performance testing of the system. Contractor shall test up to 50% of the system to prove operational requirements are met. The test sections shall be chosen at random by the CxA to ensure uniformity of the system. Failure of any test section shall require retesting of that section and an additional test section equivalent in scope. Coordination will be required to avoid impact to the construction schedule.

Level 5 - The CxA will perform Level 2 activities and will witness contractor performance testing of the system. Contractor shall test up to 100% of the system to prove operational requirements are met. Failure of any test section shall require retesting of that section. Coordination will be required to avoid impact to the construction schedule.

* Testing percentages may vary based on testing success rate.

3.9 METHODS OF TESTING

A. HVAC Systems

1. CxA may witness specified duct air leakage testing during rough-in. Contractor to forward all duct air leakage reports to CxA for review.
2. CxA will visit the site during rough-in of ductwork, piping and equipment to verify proper maintenance clearances and access are being maintained.
3. The CxA may witness contractor and/or factory start-up of equipment.
4. The TAB contractor shall re-measure up to 20% of the TAB report values for the CxA to observe and to verify balance values are within allowable design tolerances.
5. Stand-alone controls will be tested independent of item B below.
6. Contractor will demonstrate to the CxA that the operation of each system through all modes, alarms, and operating parameters meet the contract documents.

B. Building Management System

1. After receipt of the controls contractor's calibration and point to point reports by the CxA, the controls contractor will re-measure some of the points for the CxA to verify that the calibration and communication is correct. The points to be verified will be selected by the CxA.
2. Controls contractor shall provide an as-built shop drawing to the CxA for use in executing FPT.
3. All of the user graphics interfaces and displayed operating points will be demonstrated for the CxA by the controls contractor.
4. Controls contractor shall manipulate the system to demonstrate that it performs all of the specified modes of operation.
5. Points selected by the CxA will be trended for 1-2 weeks by the controls contractor to verify control operation and response. System needs to be in auto without alarms.

C. Electrical Systems

1. During the installation the CxA will perform the following for the electrical systems:
 - a. Periodically observe the installation of equipment.

- b. Review the completed Pre-functional Checklists (PFC).
 - c. Verify the PFC's by observing the completed work and comparing to the values listed in the PFC.
 - d. Review the factory authorized programming and checkout report of the lighting control panels and devices.
 - e. The contractor is to provide NETA (InterNational Electrical Testing Association) certified third party testing of the power distribution system and provide the CxA with a certified test report.
 - f. CxA will review contractor provided as-builts for proper identification and labeling of all equipment, piping and devices.
2. To test the performance of the lighting control system the CxA will perform the following tasks:
 - a. Witness the contractor testing each scene from each wall station.
 - b. Verify these scenes match the design intent from the contract documents.
 - c. Witness the contractor testing the integration to the other integrated systems such as audio visual and monitoring abilities from the BMS.
 - d. Verify this integration allows control and/or monitoring from the other systems.
 3. Upon completion of the emergency power system, factory start-up and contractor pretesting, the CxA will witness a contractor test to verify complete system power loss and verify proper power provision of critical systems. The test will not be scheduled until all other systems dependent on emergency power have been tested and approved.
- D. Plumbing
1. Domestic and industrial hot water will be tested by the CxA by measuring the hot water temperature at a percentage of the fixtures along with the time it takes to reach that temperature.
 2. Contractor shall demonstrate domestic hot water boilers, pumps and controls through all modes of operation and alarms.
 3. Contractor shall demonstrate to the CxA that the sanitary sewer and domestic booster pump operation through all modes and alarms meets approved sequence of operations.
 4. After contractor has adjusted all fixtures for proper flush and sink fixture metering, the CxA will test plumbing fixtures for proper operation.
 5. The contractor shall demonstrate the water management system to the CxA.
 6. The CxA will test the compressed air and vacuum systems for proper operation.
- E. Irrigation
1. The CxA will witness the contractor demonstration of the irrigation controller and coverage using the contractor's as-built drawings.

3.10 COST OF RE-TESTING AND COMMISSIONING READINESS LETTER (CxRL) – SYSTEMS FUNCTIONAL TESTING READINESS CERTIFICATION AND NOTIFICATION

- A. If CxA arrives onsite, on the scheduled date for functional testing (as indicated on the CxRL, see Exhibit A of this specification section) which cannot be completed due to systems readiness failure, systems technician no-show, or other circumstances not caused by CxA resulting in failed functional testing; it is understood that the CxA's client (listed on CxRL) will be invoiced for expenses incurred by CxA. The contractor also agrees to reimburse said client for incurred expenses. CxA expenses will be invoiced as noted in the CxRL.
- B. It is the Contractor's responsibility to QC and pre-test all building equipment and systems. The CxA shall confirm function of each system. If a device, piece of equipment, sequence, or system fails a test, corrections shall be made immediately and retested. Corrections that cannot be corrected immediately or that delay completion of CxA testing shall be reimbursed by the Contractor.

3.11 Exhibit A: Commissioning Readiness Letter (CxRL) - Systems Functional Testing Readiness Certification and Notification

Las Positas College / Building 1500/1800
 3000 Campus Hill Drive, Livermore, CA 94551

This letter shall serve as certification to 3QC that all applicable systems checked below have been fully tested to perform as specified in the Construction Documents, in accordance with 3QC's Functional Testing Checklists, and that all functional testing prerequisites as outlined in the Commissioning Specifications and Commissioning Plan have been completed and submitted to 3QC for review. 3QC is hereby officially notified to begin onsite functional testing of the following systems:

Systems Ready for Functional Testing by 3QC <i>(Completed by General Contractor or CM at Risk as systems become available and are ready for testing and meeting all criteria explained here within – Check only the systems that are ready at this time, use additional copies of this letter if needed as systems become ready.)</i>		
Check Applicable System	Systems	Date GC is Requesting for CxA on-site Functional Testing *
<input type="checkbox"/>	TAB Verification	
<input type="checkbox"/>	BMS, BAS, DDC or EMS	
<input type="checkbox"/>	HVAC Systems	
<input type="checkbox"/>	Plumbing Systems	
<input type="checkbox"/>	Lighting Control Systems	
<input type="checkbox"/>	Renewable Energy Systems	
<input type="checkbox"/>	Irrigation	

*** = Systems Technician Required** – The contractor certifies that a systems technician familiar with and capable of operating each system to be commissioned will be available onsite throughout functional testing by 3QC. For BMS, BAS, DDC or EMS systems this must be the commissioning technician/programmer.

Failed Functional Testing – If the CxA arrives onsite, on the date(s) indicated above, for functional testing of identified system(s) and cannot be tested due to systems readiness failure, systems technician no-show, or other circumstances not caused by 3QC resulting in failed functional testing; it is understood that 3QC's client (listed below) will be invoiced for travel and expenses incurred by 3QC. The Contractor agrees to reimburse project Owner for incurred expenses as described in Specification Section 019113, 1.4 COMPENSATION, B.

Signature of 3QC's Client or Representative	Print Name	Date

Signature of General Contractor or CM at Risk	Print Name	Date

3.12 Exhibit B: Commissioning Activity Schedule

Commissioning Activity Schedule							
GC Baseline Schedule Activity ID #	Commissioning (Cx) Construction Phase Activity		Building System		Parallel Construction Site Activity	Duration of Cx Activity	CxA Required Site Visit
			MEPCx				
1	Cx Kick-off Meeting		•		Contractor mobilized onsite	1 day	•
2	CxA provides a digital jobsite Cx Plan Binder with Pre-Functional Checklists to CM or Contractor		•		CM or GC to receive Cx Plan & PFC binder from CxA 1 month prior to MEP equipment startup	-	
3	CxA identifies submittals required for Cx		•		Contractor provides a submittal list for CxA review	-	
4	CxA reviews submittals		•		A/E reviews submittals	-	
5	CxA begins to receive O & M Manuals		•		Subcontractors send O & M Manuals to Contractor	TBD	
6	CxA performs site verification of mechanical equipment, and makes updates to Cx Equipment List & Cx Master Issues Log		•		Mechanical equipment set	1 day	•
7	CxA starts development of Cx Functional Test Checklists		•		Submittal reviews complete. <i>Note: Approved control submittal, with Sequences of Operation, is required to start MEP Cx Functional Test Checklists</i>	14 days	
8	CxA notified that permanent power is installed		•		Permanent power installed	-	
9	CxA receives copies of the field Duct Leakage Testing Reports		•		Duct leakage testing completed (if required)	-	
10	CxA conducts onsite functional testing procedures coordination meeting with CM, GC, MEP, communications, and security subcontractors		•		1 Month prior to Cx Functional Testing	1 day	•
11	CxA issues Functional Test Plan & Checklists to CM, GC, MEP, communications, and security subcontractors		•		1 Month prior to Cx Functional Testing	-	
12	CxA reviews start up reports and may witness startup of HVAC equipment.		•		GC sends completed startup reports	TBD	
13	CxA receives jobsite Pre-Functional Checklist Binder w/ completed, signed, and dated checklists		•		Completed Pre-Functional Checklists 2 Weeks prior to Cx Functional Testing	-	
14	Building LEED flush-out schedule received by CxA (if applicable)		•		CM or GC coordinates LEED flush-out schedule prior to Cx functional testing activities	-	

Commissioning Activity Schedule							
GC Baseline Schedule Activity ID #	Commissioning (Cx) Construction Phase Activity		Building System		Parallel Construction Site Activity	Duration of Cx Activity	CxA Required Site Visit
			MEPCx				
15	CxA receives field TAB Report reviewed and approved by Engineer of Record		•		1 Week prior to Cx Functional Testing	-	
16	CxA notified that Controls System is complete, and receives controls point to point testing report.		•		Equipment and systems to be under command of the Building Management System (BMS) and controls graphics complete. Point to Point controls testing complete.	-	
17	CxA receives completed/signed Commissioning Readiness Letter (CxRL) indicating Commissioned Systems are ready for Cx Functional Testing		•		1 Week prior to Cx Functional Testing	-	
18	CxA starts Functional Performance Tests (FPTs) on TAB, BMS, HVAC, domestic hot water, lighting controls, PV, and Irrigation Control Systems.		•		FPTs are scheduled after CxA receives the following functional testing prerequisites: a. Pre-functional checklist completed and signed b. EOR Approved TAB report c. Equipment and systems to be under command of the Building Management System (BMS) and controls graphics complete d. Signed CxRL that commissioned systems are completed and ready for Cx functional testing	5 total days of items 19 thru 25	
19	CxA verification of the TAB report air and water balance values		•		TAB, Controls, and Mechanical subcontractors meet CxA onsite to verify TAB report	1 day	•
20	CxA FPTs of BMS		•		Controls subcontractor meets CxA onsite to perform Functional Testing of BMS after BMS point-to-point and QC checkout is completed	1/2 day	•
21	CxA FPTs of HVAC		•		Controls and Mechanical subcontractors meet CxA onsite to perform functional testing of HVAC systems	2 days	•
22	CxA FPTs of Domestic Water and Domestic Hot Water		•		Plumbing subcontractor meets CxA onsite to perform functional testing of domestic cold and hot water	1/2 day	•

Commissioning Activity Schedule							
GC Baseline Schedule Activity ID #	Commissioning (Cx) Construction Phase Activity		Building System		Parallel Construction Site Activity	Duration of Cx Activity	CxA Required Site Visit
			MEPCx				
23	CxA FPTs of Lighting Controls		•		Lighting Control and Electrical subcontractors meet CxA onsite to perform functional testing of lighting controls	1/2 day	•
24	CxA FPTs of Irrigation Controls		•		Irrigation subcontractor meets CxA onsite to perform functional testing of irrigation controls and systems	1/2 day	•
25	CxA FPTs of Photovoltaic (PV) Solar Panels		•		PV and Electrical subcontractors meet CxA onsite to perform functional testing of irrigation controls and systems	1/2 day	•
26	CxA receives building systems owner training plan, including agendas, attendee lists, and training schedule. Provide 30 days prior to first training.		•		Systems training completed after Cx functional testing completed	-	
27	CxA confirms that Cx issues are resolved. (Preferably all issues are resolved.)		•		CM receives responses addressing and closing out Cx issues	14 days	
28	Cx Report		•		Cx systems testing completed	21 days	
29	Cx Systems Manual		•		Cx systems O & M Manuals sent to CxA	14 days	
30	Cx Warranty Review		•		10 months from date of owner's occupancy	1 day	•

SCHEDULE NOTES:

The following sequential priorities are required to be followed:

1. Equipment is not “temporarily” started (for heating or cooling), until pre-start checklist items and all manufacturer’s pre-start procedures are completed, dirt, dust and other environmental and building integrity issues have been addressed.
2. Functional performance testing does not begin until Pre-Functional, start-up and TAB is completed for a given system.
3. The controls systems and equipment under its control is not functionally tested until all points have been calibrated and Pre-Functional Checklists are completed.

END OF SECTION

SECTION 024100 - GENERAL DEMOLITION PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Demolition and removal of buildings and site improvements.
2. Demolition and removal of selected portions of building or structure.
3. Removing below-grade construction.
4. Disconnecting, capping or sealing, and removing site utilities.
5. Protection of existing conditions.

B. Related Requirements:

1. Section 013516 "Alteration Project Procedures" for description of Work governing the demolition Work of this Section.
2. Section 015639 "Temporary Tree and Plant Protection" for site protection requirements during demolition and construction.
3. Section 015000 "Temporary Facilities" for temporary construction aids, equipment, site access, barriers, and other requirements for use of Site during demolition and construction.
4. Section 017419 "Construction Waste Management and Disposal" for requirements for demolition waste disposal and recycling.
5. Section 018113.5 "Sustainable Design Requirements - LEED v4 BD+C" for requirements to achieve LEED certification.
6. Section 018113.71 "CALGreen Non-Residential Mandatory Measures" for CALGreen environmental requirements relative to sitework.
7. Section 311000 "Site Preparation and Demolition" for site clearing and removal of above- and below-grade site improvements not part of building demolition.
8. Section 312000 "Earthwork and Grading" for additional information affecting site preparation and demolition.

1.2 DEFINITIONS

- A. General: Definitions included in Section 013516 "Alteration Project Procedures" apply to the Work of this Section.

1.3 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.

1.4 PREINSTALLATION MEETINGS

- A. Predemolition Conference: Conduct conference at Project site subsequent to Preliminary Conference for Alterations Work specified in Section 013516 "Alteration Project Procedures."
1. Inspect and discuss condition of construction to be demolished.
 2. Inspect and discuss condition of construction to be selectively demolished.
 3. Review structural load limitations of existing structures.
 4. Review and finalize building and site demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 5. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
 6. Review procedures for noise control and dust control.
 7. Review and finalize procedures for protection of adjacent buildings, existing trees and vegetation to remain, paths of access and egress to and from adjacent buildings. Review areas where existing construction is to remain and requires protection.
 8. Review items to be salvaged and returned to Owner, if any.

9. Review items to be removed and reused, if any.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified refrigerant recovery technician.
- B. Engineering Survey: Submit engineering survey of condition of building to be demolished and adjacent buildings receiving selective demolition.
- C. Proposed Protection Measures: Refer to Section 013516 "Alteration Project Procedures."
- D. Demolition Schedules: Submit granular detailed schedules of dates and durations of the following demolition activities.
1. Schedule of Building Demolition Activities: Indicate the following:
 - a. Detailed sequence of demolition work, with starting and ending dates for each activity.
 - b. Temporary interruption of utility services.
 - c. Shutoff and capping or re-routing of utility services.
 2. Schedule of Site and Selective Demolition Activities: Indicate the following:
 - a. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure District's building manager's and other tenants' on-site operations are uninterrupted.
 - b. Interruption of utility services. Indicate how long utility services will be interrupted.
 - c. Coordination for shutoff, capping, and continuation of utility services.
 - d. Use of elevator and stairs.
 - e. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.
 3. Add high-level general dates and durations to Alteration Work Schedule required by Section 013516 "Alteration Project Procedures."
- E. Predemolition Photographs: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by demolition operations. Comply with Section 013233 "Photographic Documentation." Submit before the Work begins.
- F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.6 QUALITY ASSURANCE

- A. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.
- B. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- C. Standards: Comply with ANSI/ASSE A10.6 and NFPA 241.
- D. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

1.7 FIELD CONDITIONS

- A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.
- B. Architect and District assumes no responsibility for buildings and structures to be demolished.

1. Conditions existing at time of inspection for bidding purpose will be maintained by District as far as practical.
- C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.
- D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.
 1. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and District. Hazardous materials will be removed by District under a separate contract.
- E. On-site storage or sale of removed items or materials is not permitted.
- F. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.
 1. Maintain fire-protection facilities in service during selective demolition operations.

1.8 COORDINATION

- A. Arrange demolition schedule so as not to interfere with District's on-site operations or operations of adjacent occupied buildings.

1.9 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

1.10 STORAGE AND HANDLING OF SALVAGED MATERIALS

- A. Existing Materials to Remain: Protect construction indicated to remain against damage and soiling from construction work. Where permitted by Architect, items may be dismantled and taken to a suitable, protected storage location during construction work and reinstalled in their original locations after alteration and other construction work in the vicinity is complete.
- B. Storage: Catalog and store items within a weathertight enclosure where they are protected from moisture, weather, condensation, and freezing temperatures.
 1. Identify each item for reinstallation with a nonpermanent mark to document its original location. Indicate original locations on plans, elevations, sections, or photographs by annotating the identifying marks.
 2. Secure stored materials to protect from theft.
 3. Control humidity so that it does not exceed 85 percent. Maintain temperatures 5 deg F (3 deg C) or more above the dew point

PART 2 - .PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ANSI/ASSE A10.6 and NFPA 241.

2.2 SOIL MATERIALS

- A. Satisfactory Soils: Comply with requirements in Section 312000 "Earthwork and Grading."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting demolition operations.
- B. Review Project Record Documents of existing construction provided by District. District does not guarantee that existing conditions are same as those indicated in Project Record Documents.
- C. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.
- D. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations. Comply with Section 013233 "Photographic Documentation."
- E. Engage a professional engineer to perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during demolition operations.
 - 1. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.
- F. Inventory and record the condition of items to be removed and salvaged, if any.
- G. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.
- H. When unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure the nature and extent of conflict. Promptly submit a written report to Architect.

3.2 PREPARATION

- A. Refrigerant: Remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction before starting demolition.
- B. Existing Utilities: Locate, identify, disconnect, and seal or cap off indicated utilities serving buildings and structures to be demolished. Refer to information below and as noted on Drawings.
- C. Site Access and Temporary Controls: Conduct demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Comply with requirements for access and protection specified in Section 015000 "Temporary Facilities."
- D. Temporary Facilities: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.

1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
 2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
 3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
 4. Cover and protect furniture, furnishings, and equipment that have not been removed.
 5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Section 015000 "Temporary Facilities."
- E. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.
1. Strengthen or add new supports when required during progress of demolition.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

- A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.
- B. Existing Utilities to be Disconnected: Locate, identify, disconnect, and seal or cap off utilities serving buildings and structures to be demolished. Refer to Section 311000 "Site Preparation and Demolition" for additional requirements for site demolition and clearing.
1. Arrange to shut off utilities with utility companies.
 2. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
 3. Cut off pipe and conduit to depth below grade as indicated. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
 4. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.

3.4 PROTECTION

- A. Existing Facilities: Protect existing vegetation, walkways, loading areas, building entries, equipment, utilities, and other improvements and facilities at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities. Maintain exits from existing buildings.
- B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
- C. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.
1. Strengthen or add new supports when required during progress of demolition.
- D. Existing Utilities to Remain: Maintain utility services to remain and protect from damage during demolition operations.
1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by District and authorities having jurisdiction.
 2. Provide temporary services during interruptions to existing utilities, as acceptable to District and authorities having jurisdiction.

- a. Provide at least 72 hours notice to occupants of affected buildings if shutdown of service is required during changeover.
- E. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Section 015000 "Temporary Facilities."
1. Protect adjacent buildings and facilities from damage due to demolition activities.
 2. Protect existing site improvements, appurtenances, and landscaping to remain.
 3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.
 4. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 5. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
 6. Protect walls, windows, roofs, and other adjacent exterior construction that are to remain and that are exposed to building demolition operations.
 7. Erect and maintain dustproof partitions and temporary enclosures to limit dust, noise, and dirt migration to occupied portions of adjacent buildings.
- F. Traffic Controls: Comply with requirements of authorities having jurisdiction.
1. Protect existing site improvements to remain, including curbs, pavement, and utilities.
 2. Maintain access for fire-fighting equipment and access to fire hydrants.
- G. Temporary Erosion and Sedimentation Control:
1. Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, according to requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.
 - a. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant-protection zones.
 - b. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
 - c. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project.
 - d. Remove erosion and sedimentation controls, and restore and stabilize areas disturbed during removal.
- H. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
- I. Tree and Plant Protection:
1. Comply with requirements specified in Section 015639 "Temporary Tree and Plant Protection."
 2. Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
- J. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
 2. Remove snow and ice as required to minimize accumulations.

- K. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals, so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using materials approved by authorities having jurisdiction.
- L. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.
- M. Maintenance: Maintain protection measures in good operating condition until removal.
 - 1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- N. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.
- O. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION, GENERAL

- A. General: Demolish indicated buildings and site improvements completely. Use methods required to complete the Work within limitations of governing regulations and as follows:
 - 1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
 - 2. Maintain fire watch during and for at least two (2) hours after flame cutting operations.
 - 3. Maintain adequate ventilation when using cutting torches.
 - 4. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
- B. Engineering Surveys: During demolition, perform surveys to detect hazards that may result from building demolition activities.
- C. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from District and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
 - 2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.
- D. Explosives: Use of explosives is not permitted.

3.6 SELECTIVE DEMOLITION, GENERAL

- A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.
3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain fire watch and portable fire-suppression devices during flame-cutting operations.
5. Maintain adequate ventilation when using cutting torches.
6. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
7. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
8. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
9. Dispose of demolished items and materials promptly. Comply with requirements in Section 017419 "Construction Waste Management and Disposal."

3.7 DEMOLITION BY MECHANICAL MEANS

- A. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.
- B. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
 1. Remove structural framing members and lower to ground by method suitable to minimize ground impact and dust generation.
- C. Below-Grade Construction: Demolish foundation walls and other below-grade construction.
 1. Remove below-grade construction, including basements, foundation walls, and footings, completely.
- D. Existing Utilities: Demolish and remove existing utilities and below-grade utility structures. Cap existing utilities at edge of Project site.
 1. Piping: Disconnect piping at unions, flanges, valves, or fittings.
 2. Wiring Ducts: Disassemble into unit lengths and remove plug-in and disconnecting devices.
- E. Elevator Systems: Demolish and remove elevator system, including pit, cylinder, plunger, well assembly, steel well casing and liner, oil supply lines, and tanks as occurs.

3.8 DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

- A. Concrete: Demolish in small sections. Using power-driven saw, cut concrete to a depth of at least 3/4 inch at junctures with construction to remain. Dislodge concrete from reinforcement at perimeter of areas being demolished, cut reinforcement, and then remove remainder of concrete. Neatly trim openings to dimensions indicated.
- B. Masonry: Demolish in small sections. Cut masonry at junctures with construction to remain, using power-driven saw, then remove masonry between saw cuts.

- C. Resilient Floor Coverings: Remove floor coverings and adhesive according to recommendations in RFCI's "Recommended Work Practices for the Removal of Resilient Floor Coverings." Do not use methods requiring solvent-based adhesive strippers.
- D. Roofing: Remove no more existing roofing than what can be covered in one day by new roofing and so that building interior remains watertight and weathertight.
 - 1. Remove existing roof membrane, flashings, copings, and roof accessories.
 - 2. Remove existing roofing system down to substrate.

3.9 SITE RESTORATION

- A. Below-Grade Areas: Completely fill below-grade areas and voids resulting from building demolition operations with satisfactory soil materials according to backfill requirements in Section 312000 "Earthwork and Grading."
- B. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.10 REPAIRS

- A. Promptly repair damage to adjacent buildings caused by demolition operations.

3.11 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove demolition waste materials from Project site and legally dispose of them in an EPA-approved landfill acceptable to authorities having jurisdiction. Comply with Section 017419 "Construction Waste Management and Disposal."
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
 - 3. Transport demolished materials off District's property and legally dispose of them.
- B. Do not burn demolished materials.

3.12 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.
 - 1. Clean roadways of debris caused by debris transport.

END OF SECTION

SECTION 031000 - CONCRETE FORMING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:
 - 1. Formwork for cast-in-place concrete and shotcrete.
 - 2. Installation of cast-in anchors, sleeves and similar items furnished under other Sections.
- B. Related Sections include the following:
 - 1. Section 033000 – Cast-in-Place Concrete.
 - 2. Section 033300 – Architectural Concrete for additional requirements for formwork for cast-in-place architectural concrete.
 - 3. Section 053100 – Steel Decking for leave-in-place formwork for deck-slabs.
 - 4. Formwork for site concrete, including paving, curbs, and steps and walls is furnished under Division 32, "Exterior Improvements," Sections.

1.3 REFERENCES

- A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.
- B. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section. Use applicable year of adoption or revision as published in ACI 301.
- C. American Concrete Institute's:
 - 1. ACI 117 – Specifications for Tolerance for Concrete Construction, 2010.
 - 2. ACI 301 – Specifications for Structural Concrete for Buildings, 2020.
- D. Product Standards:
 - 1. PS1 – Construction and Industrial Plywood.

1.4 DEFINITIONS

- A. Shoring: A System of vertical or inclined supports for forms; may be wood or metal posts, scaffold-type frames or various patented members.
- B. Backshoring: Shores placed snugly under a stripped concrete slab or structural member after the original formwork and shores have been removed from a small area without allowing the slab to deflect or support its own weight or existing construction loads from above.
- C. Reshoring: Shores placed snugly under a stripped concrete slab or structural member after original formwork and shores have been removed from a large area, thus requiring the new slab or member to deflect and support its own weight and existing construction loads prior to the installation of reshores.

1.5 SUBMITTALS

- A. Submittal procedures and administrative provisions are established by Division 01 Section "Submittal Procedures".
- B. Product data for:
 - 1. Formwork. Include all formwork elements and products, including but not limited to form work facing materials and ties.
 - 2. Form release agent used with each type of form facing material.
 - 3. Formwork layout drawings and calculations.
 - a. Show location and detail of formwork ties, construction and control joints not indicated on Contract Documents. Indicate waterstops where occur.
 - b. Show support and tie details.
- C. Shoring, formwork removal and reshoring plan: For suspended slab construction, submit proposed plan for shoring, formwork removal, backshoring, and reshoring, including methods of shoring and sequence and methods of backshoring and reshoring. Include calculations stamped and signed by an engineer licensed in the State of California demonstrating the adequacy of the shoring, backshoring, and reshoring.
- D. Samples: Only as requested by Owner's Representative.

1.6 QUALITY ASSURANCE

- A. Referenced Standard: Comply with provisions of ACI 301, except where more stringent requirements are shown or specified in this Section.
- B. Mockups: Provide formwork as necessary for mockups and test panels.

PART 2 – PRODUCTS

2.1 FORM MATERIALS

- A. General: Comply with ACI 301, Section 2.
- B. Plywood Form-facing Material: PS1, exterior-type plywood manufactured for concrete forming; edge sealed. Acceptable products: Type B-B Plyform, MDOConcrete Form or HDOConcrete Form.
 - 1. Provide only HDOConcrete Form where surface finish SF-3.0 is specified, except as approved by Owners Representative.
 - 2. Mill coating shall be per form release agents specified in this article.
- C. Forms for Cylindrical Columns: Metal, plastic or spiral wound fiber tubes.
- D. Chamfer and Rustication Strips: Softwood strips or PVC, fabricated to produce uniform smooth lines. Strips shall not be ripped from plywood or other engineered wood products. At exposed conditions, provide in longest lengths practical.
- E. Form Release Agents: Commercial formulation compounds, that will not bond with or stain concrete surfaces and will not impair bonding of paint or other coatings intended for use. Compliant with maximum allowable VOC emissions of state and local governing authorities.
 - 1. Use water-based compounds specifically formulated for use on overlay plywood, fiberglass or steel where surfaces remain exposed to view in completed construction.
 - 2. Acceptable products, use for form material noted by manufacturer:
 - a. Duogard II by W.R. Meadows.
 - b. Bio-Nox by Nox-Crete.

- c. Nox-Crete Form Coating E by Nox-Crete.
 - d. Nox -Crete Form Coating EB by Nox-Crete.
 - e. Approved equal.
- F. Form Ties: Snap-off metal ties of fixed length with plastic cone, designed to prevent spalling of concrete upon removal. Provide units that will leave no metal within 1-inch of concrete surface, except as otherwise designated.
- 1. Factory-fabricated, tapered removable ties for forming, will be acceptable at Contractor's option.
- G. Leave-in-place Stakes: Leave-in-place solid PVC or HDPE stakes, intended to serve as a permanent plug in vapor barrier, as necessary for screed stakes and to support formwork for slab on ground construction over vapor retarder. VaporStake™ by VaporStake, LLC or approved equal.
- H. EPS Foam for Forming: Provide load-bearing foam, except as otherwise designated or approved by Owner's Representative.
- 1. Load-Bearing: ASTM C578, Type XIV (40 psi) expanded polystyrene foam (EPS) or extruded polystyrene foam (EPSX) with equal compressive strength and stiffness. Acceptable products: Insulfoam XIV by Insulfoam or approved equal.
 - 2. Void Form: ASTM C578; Type IX (25 psi) expanded polystyrene foam (EPS). Material is intended for use where foam serves only as void form for concrete placement and is not required for support of load in completed work. Acceptable products: Insulfoam IX by Insulfoam or approved equal.
- I. Leave-in-place Carton Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete.
- J. Leave-in-place Ribbed Expanded Metal Forms: Expanded mesh between solid Vribs, ASTM A525 galvanized steel. Same as Stay-Form by Amico or approved equal.
- K. Expansion Joint Filler:
- 1. Fiber-Type: Preformed asphalt impregnated fiber, ASTM D1751, 3/8 inch thick where not otherwise designated.
 - 2. Foam-Type: Closed cell foam. ASTM D5249, Type 2, and ASTM D1752, Sections 5.1 to 5.4 at 10% minimum to 25% maximum compression, 3/8 inch thick where not otherwise designated. Ceramar by W.R. Meadows or approved equal.
- L. Expansion Joint Sealant: Conform to Division 07 Section "Joint Sealants". Sealant used at floors shall be traffic grade, except where joint abuts a wall, column or other vertical surface.

PART 3 – EXECUTION

3.1 CONSTRUCTION OF FORMWORK

- A. Provide, erect, support, brace and maintain formwork and shoring to safely support loads caused by concrete placement and other loads that might be applied, until such loads can be supported by hardened concrete in the completed structure.
- 1. Contractor is responsible for design and engineering of formwork, including shoring, backshoring, and reshoring.
- B. Construct forms to sizes, shapes, lines and dimensions shown and to obtain accurate alignment, level and plumb work in finished structure. Finished work shall conform to tolerances of ACI 117, including tolerances of offsets at panel edges specified below.
- 1. Surface tolerance for finish SF-1.0 is Class D.
 - 2. Surface tolerance for finish SF-2.0 is Class B, unless otherwise indicated.
 - 3. Surface tolerance for finish SF-2.0 is Class C, where SF-2.0 finish surface is not exposed to view in completed construction (pits, surfaces to receive waterproofing, etc.).

4. Surface tolerance for finish SF-3.0 is Class A.
- C. Select form facing materials to obtain required finishes. Solidly butt and back joints to prevent leakage of cement paste.
 1. Provide plywood form-facing for finish SF-2.0, except as otherwise approved by Owners Representative.
 2. Provide HDO overlay plywood form-facing for finish SF-3.0, except as otherwise approved by Owners Representative.
- D. Refer to Specification Section 033000 Table 2 "Finishes for Formed Surfaces" for formed surface finish.
- E. Provide shores and struts with positive means of vertical adjustment. Adjust forms to line prior to concrete placement and only as necessary during concrete placement; do not make adjustments following initial set of concrete.
 1. To maintain specified elevation tolerances, camber formwork to compensate for anticipated deflections during concrete placement, including deflection of lower level floors that support shoring.
- F. Make provisions in formwork for removal of debris from formed spaces. Locate temporary openings in inconspicuous locations at bottom of forms. Close ports with tight fitting panels, flush with inside face of forms.
- G. Chamfer external corners of beams, columns and walls. Provide 3/4-inch chamfer where not otherwise designated.
- H. Plywood Forms at Exposed-to-view Surfaces:
 1. Keep number of panel joints to practical minimum.
 2. Ensure vertical joints are plumb and horizontal joints are level.
 3. Align form ties vertically and horizontally.
- I. Form Release Agent: Apply a coating of form release agent immediately prior to installation of reinforcing steel and embedded items. Do not allow release agent to puddle on forms or concrete.
- J. Provision for Other Trades: Provide openings in formwork and sleeves to accommodate work of other trades. Determine size and location of openings and recesses from trades requiring them. Obtain approval of Owner's Representative for openings not shown on structural drawings.
- K. Earth Forms: Footing forms may be omitted and foundation concrete may be placed directly into neatly and accurately cut excavations, provided the excavation walls are stable.
 1. Earth forms are constructed under Division 31 Section "Structural Excavation and Fill".
 2. Form footings to minimum extent shown on Drawings, but not less than 6 inches below finish grade at surfaces exposed to view. Leave-in place formwork shall not be acceptable in this zone.
- L. Leave-in-Place Formwork: Provide only as designated on Drawings, except as approved by Owner's Representative.
- M. Slab on Grade over Vapor Retarder: Avoid use of stakes through vapor retarder. Stakes will not be permitted where vapor barrier cannot be repaired after removal of stake.
 1. Plastic stakes specifically designed for leave-in-place use by vapor retarder manufacturer will be permitted.

3.2 JOINTS

- A. Expansion Joints:
 1. Provide expansion joints and isolation joints where designated on Contract Documents.

2. Place joint filler in straight line with edge held back to specified dimension from finish surface and secured to formwork or previously placed construction.
3. Use fiber filler at building exterior, except where joints are to be sealed.
4. Use foam type joint filler at all interior joints and at sealed joints at building exterior. Hold edge back as required for sealant application in accordance with sealant manufacturer's recommendations.

B. Construction Joints:

1. Provide where shown on drawings or as approved by the Owner's Representative.
2. Provide 1½ inch deep key indentations at formed joints in beams, walls, and slabs that are 8 inches or more in thickness. Make key 1/3 of member thickness at widest portion of kerfed form.
 - a. Roughen joint to ¼ inch amplitude to expose firmly embedded aggregate prior to second concrete placement.
3. At Leave-in-place Ribbed Expanded Metal Forms, clean leakage, laitance, and all other material from form face to expose clean metal prior to second concrete placement.
4. Provide rustication strips at exposed to view surfaces. Where no reveal remains in completed construction, install ¾ inch x 1-1/2 inch kerfed strip centered on joint and remove strip prior to making second pour.

3.3 EMBEDDED ITEMS

- A. Accurately place and securely support anchorage devices and other embedded items required for other work that is attached to cast in place concrete.
1. Use setting templates, drawings, and instructions provided by supplier of items.
 2. Temporarily fill voids with readily removable material to prevent entry of concrete.
 3. Use only stainless steel fasteners for securing built in items to formwork, where end of fastener is exposed to view or weather in completed construction. Cut back and grind fasteners flush with concrete surface.
- B. Anchor rods (bolts) for steel columns shall be set to tolerances of Section 7.5.1 of AISC "Code of Standard Practice" (2010), which are more stringent than the requirements of ACI 117.
- C. Aluminum Items: Aluminum surfaces in contact with concrete shall be painted with a bituminous paint complying with SSPC Paint 12, "Cold Applied Asphaltic Mastic", 1/8-inch minimum thickness; or other approved coating system.

3.4 FORM REMOVAL

- A. Do not remove forms and shores until concrete has hardened and attained sufficient strength to permit safe removal and adequate support of inherent and imposed loads.
1. In multi-story buildings, provide reshoring, as necessary, to distribute weight of newly placed concrete and construction live loads over sufficient number of floors below. Sequence form removal, shoring and reshoring in accordance with submitted formwork removal and reshoring plan.
 2. Remove top forms on sloping concrete surfaces as soon as removal will not allow concrete to sag.
 3. Loosen formwork for wall openings as soon as loosening operations will not damage concrete.
- B. Carefully remove form facing material to avoid spalling concrete surfaces, in particular at corners and edges of exposed to view concrete. Prying against the face of concrete shall not be allowed.
- C. Where form facing material is removed in less than 3 days, immediately commence curing in accordance with provisions of Section 033000, "Cast-in-Place Concrete".
- D. Beams and One-way Slabs: Maintain forms and shores at underside until concrete achieves 75% of design strength, minimum 7 days. Maintain shores or backshores until concrete has achieved design strength, 21 days minimum. Install reshores, as necessary, where placement continues above.

- E. Two-way Slabs: Conform to submitted formwork removal and reshoring plan.
 - 1. Maintain forms and shores until concrete achieves 75% of design strength, minimum 7 days.
 - a. Form facing material and horizontal supports may be removed after 3 days where formwork system allows shores to remain in place undisturbed by removal of formwork.
 - 2. Maintain shores until concrete achieves design strength, minimum 21 days.
 - a. Shores may be removed after concrete achieves 75% of design strength, minimum 7 days, when replaced by a system of preshores and backshores that prevent slab deflection.
 - b. Maintain backshores until concrete achieves design compressive strength, 21 days minimum.
 - c. For post-tensioned slab construction, shores may be removed following tensioning operation.
 - 3. Where placement continues at additional levels above, provide a system of reshores. One level of shoring or backshoring and minimum 2 additional levels of reshoring shall be maintained until concrete achieves design strength, 21 days minimum.
 - a. For post-tensioned slab construction, reshoring may be removed following tensioning operation of upper most slab.

- F. Post-tensioned Concrete: Maintain forms and shores until post-tensioning operation is completed.
 - 1. Where placement continues at additional levels above, provide reshores. One level of shoring and minimum 2 additional levels of reshoring shall be maintained until post-tensioning operation is complete.

3.5 REUSE OF FORMS

- A. Reuse of forms shall be acceptable provided they are straight, clean, free from nails, dirt, hardened concrete, rust, and other injurious matter and edges and surfaces are in good condition. Reuse of formwork that would reduce quality of exposed-to-view concrete shall not be permitted.

END OF SECTION

SECTION 032000 - CONCRETE REINFORCEMENT

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:
1. Reinforcement for cast-in-place concrete and shotcrete.
 2. Accessories as required to support and secure reinforcement.
 3. Stud-rails for slab reinforcement.
- B. Related Sections:
1. Section 036100 – Grouted Dowels for installation of reinforcing bar dowels in hardened concrete.
 2. Section 051200 – Structural Steel Framing for reinforcement welded to structural steel.

1.3 REFERENCES

- A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.
- B. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section. Use applicable year of adoption or revision as published in ACI 318, Section 3.2, "Referenced standards", and as noted in this paragraph.
1. ASTM A82 – Standard Specification for Steel Wire, Plain, for Concrete Reinforcement.
 2. ASTM A970 – Standard Specification for Headed Steel Bars for Concrete Reinforcement
- C. American Concrete Institute's:
1. ACI 301 – Specifications for Structural Concrete for Buildings, 2020.

- J. ICC Evaluation Service (ICC-ES):
 - 1. ICCES "Evaluation Reports" and "Acceptance Criteria" indicating compliance of proprietary products for conformance with 2021 International Building Code.
- K. International Standards Organization (ISO)

1.4 DEFINITIONS

- A. Awarding Authority: The state authority under which a California state project is awarded. The University of California shall serve as the awarding authority for non-California state projects
- B. Product Category Rule: The set of rules, requirements, and guidelines accepted by the awarding authority used to develop on EPD for a product group.
- C. Environmental Product Declaration (EPD): A document that reports a product's global warming potential and that:
 - 1. Is developed according to the guidelines of the applicable Product Category Rule acceptable to the California State awarding authority. Reference Buy Clean California Act.
 - 2. Is independently verified in accordance with ISO 14025:2006 Environmental labels and declarations - Type III environmental declarations – Principles and procedures
- D. Manufacturer: An entity that produces the basic construction material that typically requires additional processing by a fabricator before use in a project.
 - 1. A steel mill that produces steel reinforcement is a manufacturer.
 - 2. A facility that bends, welds, cuts, or otherwise shapes reinforcement into shapes is a fabricator.
- E. Global Warming Potential (GWP): A measure of carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, and perfluorocarbons produced when manufacturing a product represented by an equivalent amount of CO₂, expressed as CO₂ eq.
- F. Product Category Rule (PCR): The set of rules, requirements and guidelines used to develop an EPD for a product group.

1.5 SUBMITTALS

- A. Submittal procedures and administrative provisions are established by Division 01 Section "Submittal Procedures".
- B. Test Reports: Furnish test reports, evidencing and certifying compliance with specified standards, to Testing Laboratory for record purposes.
 - 1. Reinforcing steel.
 - 2. Shear studs and stud-rail assemblies.
 - 3. Headed deformed bar.
- C. Product data for proprietary items, including bar couplers, headed bars, stud-rails, and welding electrodes.
 - 1. Furnish manufacturer's written installation instructions and Evaluation Reports indicating quality control and special inspection requirements to Testing Laboratory for their use.
- D. Welding Qualifications:
 - 1. Welding procedure specifications (WPS) and procedure qualification records (PQR).

2. Submit welder qualifications to Testing Laboratory for record purposes.
- E. Shop Drawings: Submit placing drawings prepared in accordance with ACI 315. Show size, shape and location of bars in structure. Show splice locations and lengths. Where details are not shown on Contract Documents, conform to standards of practice indicated in ACI 315.
- F. Environmental Product Declarations (EPDs) for all steel reinforcing.
 1. Provide manufacturer's single-facility EPD or company-wide EPD that reports for each facility location supplying material.
 - a. EPD must be valid at the time of material installation.
 - b. The following EPDs are not acceptable:
 - 1) Industrywide and/or industry-average product declarations.
 - 2) Fabricator's product declarations.
 - 3) Companywide declarations that do not report the GWP of its manufacturing facilities separately.
 2. Include at a minimum:
 - a. Product description
 - b. Product category rule under which the EPD was developed.
 - c. Body verifying that the EPD was developed according to ISO 14025 for the applicable PCR.
 - d. Expiration date
 - e. Manufacturer and manufacturer's location
 - f. Global warming potential measured in CO₂ eq.
 3. EPD must be valid at the time of material installation.

1.6 QUALITY ASSURANCE

- A. Codes and Standards: Comply with provisions of ACI 301 and CRSI's "Manual of Standard Practice", except where more stringent requirements are shown or specified.
- B. Material Quality Assurance:
 1. Reinforcing: Mill test reports including chemical analysis, tensile properties and bend test shall be examined for all reinforcing. Conform to one of the following:
 - a. Maintain positive identification of reinforcing by heat number. Provide certified mill test reports to Testing Laboratory.
 - b. Evidence that fabricator's quality assurance procedures ensure that certified mill test reports for each heat have been reviewed for compliance with requirements specified. Evidence shall be satisfactory to Testing Laboratory.
 - c. Where positive identification cannot be made and procedures are not deemed adequate to ensure compliance, Owner's Testing Laboratory will randomly sample and make one tensile and one bend test from each 2½ tons or fraction thereof of each size of reinforcement. Contractor will bear the cost of testing.
 2. Headed Deformed Bars:
 - a. Conform to quality assurance requirements of applicable ICC-ES or IAPMO-ES Evaluation Report.
 - b. Test in accordance with ASTM A970 for each bar size used in the work. Testing may be conducted by manufacturer's laboratory, subject to approval of Owner's Representative. Fabricator shall bear the cost of testing.
 - c. When number of headed bars of one size exceeds 200, tension test 1 additional specimen for each additional 200 heads or fraction thereof.

3. Mechanical Bar Couplers:
 - a. Conform to quality assurance requirements of applicable ICC-ES or IAPMO-ES Evaluation Report.
- C. Qualifications for Welding Work: Qualify welding procedures and welders in accordance with AWS D1.4.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Store reinforcement in a manner that will prevent excessive rusting or fouling with grease, oil, dirt, and other bond weakening materials.
- B. Store in a manner to maintain identification of bars after bundles are broken.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Reinforcement, headed bar reinforcement, and dowels shall meet the GWP limits included in Table 1 of the Buy Clean California Act Environmental Product Declaration (EPD) Compliance Guide, and of CGBC Table 5.409.3.
- B. Bar Reinforcement: ASTM A615, Grade 60, or ASTM A706 deformed bars, except as otherwise designated.
 1. ASTM A706 for bars to be welded.
 2. ASTM A706, Grade 60, where designated A706 without designating grade on Contract Documents.
 3. ASTM A706, Grade 80, where designated on Contract Documents.
- C. Headed Bar Reinforcement: Deformed bar reinforcement (#11 and smaller) with forged, welded, or mechanically attached heads conforming to the requirements of ASTM A970, including Annex A1 Requirements for Class HA Head Dimensions. Acceptable systems shall have an active ICC-ES or IAPMO-ES Evaluation Report evidencing compliance with specified criteria and establishing quality assurance and special inspection requirements. Subject to compliance with requirements, provide one of the following, or approved equal:

HRC 555 Headed Bar, by Headed Reinforcement Corp. (ICC ESR-2935).
Bartech Mechanical Anchor, by Dextra Manufacturing Co. (ICC ESR-2166).
Lenton Terminator D16 (taper threaded); by Erico (IAPMO ESR-0129).
- D. Welded Wire Fabric: ASTM A1064.
- E. Smooth Dowels: ASTM A615, Grade 40 or 60, smooth; sawcut or grind ends to remove offsets; shop paint with iron-oxide zinc-chromate primer with 2.0 mils dry film thickness or provide epoxy coated.
- F. Galvanized Reinforcing Bars: ASTM A767 hot-dip galvanized deformed bar reinforcement.
- G. Bar Couplers: Capable of producing Type 1 or Type 2 mechanical splice in accordance with Section 21.1.6 of ACI 318. Select coupler type considering conditions of installation and space limitations; maintain specified cover and reinforcement position acceptable to Owner's Representative. Acceptable coupler systems shall have an active ICC-ES or IAPMO-ES Evaluation Report evidencing compliance with the specified criteria and establishing quality assurance and special inspection requirements.
 1. Couplers may only be used on Grade 60 ($f_y = 60\text{KSI}$) reinforcement.
 2. Type 1 splices shall be acceptable, unless otherwise designated.
 3. Where spliced bars are designated to conform to ASTM A706 or where splices are designated as Type 2 on drawings, splices shall conform to Type 2.

4. Subject to compliance with requirements, provide one of the following mechanical splice systems:

Lenton, Erico Inc. (IAPMO ESR-0129)
Bartec, Dextra America, Inc. (ICC ESR-1705)
Taperlock, Dayton Superior (ICC ESR-2481)
HRC 500/510, Headed Reinforcement Corp (ICC ESR-2764)
Bar-Lock, Dayton Superior (ICC ESR-2495)
GripTwist, Bar Splice Products, Inc (IAPMO ER7960)

- H. Stud-rails: Welded assemblies of specialty headed shear studs and base rails conforming to ASTM A1044. Acceptable stud-rail systems shall have an active ICCES or IAPMOES Evaluation Report evidencing compliance with the specified criteria and establishing quality assurance and special inspection requirements.
- I. Welding Electrodes: AWS D1.4.
- J. Bar Supports: Conform to requirements of CRSI Manual.
1. Provide precast concrete supports, with base not less than 3 inches square, against ground or atop vapor retarder.
 2. Provide CRSI Class 1 plastic or plastic protected supports at surfaces exposed to view or weather in completed construction. Select support type to provide minimum surface contact.
 3. CRSI Class 2 wire supports and precast concrete supports shall be acceptable at surfaces not exposed to view in completed construction.
 4. CRSI Class 3 wire supports shall be acceptable where support is no closer than 1/2 inch to surface or where support is placed atop steel deck.
 5. Supports and tie wire for epoxy coated bars shall be plastic or polymer coated, and shall be of configuration approved by Owner's Representative.

2.2 FABRICATION

- A. Shop fabricate reinforcement to standard fabrication tolerances indicated in ACI 315.
- B. Column Bar Splices: Offset bend bars at 1:6 slope at splices, except at round columns that permit bars to be in the same circle.
- C. Spirals:
1. End Anchorage: Provide 1½ extra turns with 90-degree tie hook at each end of spiral unit.
 2. Splices: Provide designated lap splice and 90-deg tie hook at end of each spiral unit; no additional turns are required. Lap splice shall be minimum 48 bar diameters for deformed bars and 72 wire diameters for smooth wire.
- D. Headed Bars: Headed deformed bars will be allowed to be substituted for 90 deg hooked bars, subject to meeting the requirements specified herein and written approval of Owner's Representative.
1. Bars are designated to be ASTM A615, Grade 60 or ASTM A706, Grade 60.
 - a. Headed bars may be Grade 80 where ICC or IAPMO engineering reports permit their use for Grade 80 reinforcement.
 2. Clearance between headed bars shall be at least 4 bar diameters in accordance with ACI 318, Section 12.6.
 3. A minimum cover of 2 bar diameters, 1½ inches minimum, shall be provided to all faces of head.
 4. Headed bars shall not be substituted for stirrups and ties that serve to confine beam, coupling beam, and column reinforcing.
 5. Contractor shall pay the cost of any additional testing and inspection associated with use of headed bars at no additional cost to the Owner.
- E. Cage Preassembly: Pre-assembled of beam cages by machine fusion welding of holding wires to stirrups shall be acceptable, subject to the requirements below. Welding of holding wires to ties at columns and boundary elements for shear walls shall not be permitted.

1. Stirrup bars shall conform to ASTM A706.
2. Holding wires shall conform to ASTM A82 or A496.
3. Welding shall be performed by machine under a continuous controlled process.
4. Quality control tests shall be performed on fusion-welded specimens at no cost to Owner. Welding shall be performed using the same machines and processes as will be used for in-place reinforcement. A minimum of 3 specimens shall be sampled from the work of the project and tension tested. Tests will be acceptable if the specified minimum tension strength and the required elongation for ASTM A615, Grade 60 reinforcement is achieved. Sampling and testing shall be performed or witnessed by the Owner's Testing Laboratory.

2.3 SOURCE QUALITY CONTROL

- A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section "Quality Requirements".
- B. Testing Laboratory will:
 1. Review Quality Assurance procedures for maintaining identification of steel.
 2. Make one tensile and one bend test from each 10 tons or fraction thereof of each size of reinforcing steel in accordance with CBC Section 1910A.2.
 3. Review Quality Assurance procedures for fabrication of proprietary items, including headed bars, couplers, stud-rails. Perform special inspection as required by applicable Evaluation Report.
 4. Review equipment and Quality Assurance procedures for cage pre-assembly using welded holding wires. Perform or witness specified sampling and testing.

PART 3 – EXECUTION

3.1 PLACEMENT

- A. Place and maintain bars at locations shown on Drawings to the tolerances of ACI 117, including but not limited to the following:
 1. Clear distance to formed surfaces: Plus or minus 1/4 inch.
 2. Top bars in slabs 8 inches deep or less: Plus or minus 1/4 inch.
 3. Top bars in foundations, beams and slabs over 8 inches deep: Plus 1/2 inch and minus 1/2 inch.
- B. Maintain minimum coverage as indicated for concrete protection. Conform to requirements of ACI 301 where not indicated.
 1. Cover shall not be reduced at mechanical couplers and headed reinforcing.
- C. Place reinforcement with 1½ bar diameters minimum clear distance between bars, but not less than 1½ inches. Where specified clearance cannot be achieved, bundle bars.
 1. Conform to additional requirements for spacing of headed bars.
- D. Support and securely fasten bars with chairs, spacers and ties to prevent displacement by construction loads or placement of concrete beyond the tolerances specified. Conform to CRSI "Manual" as a minimum standard.
- E. Take precautions to protect vapor retarder beneath slab-on-ground from damage during installation of reinforcement.
- F. Lap Splices:
 1. Contact Splice: Lapped bars shall be placed in contact and securely tied. Lap shall be oriented to maintain bars in their designated layer, except where offset bent bars are used at splices. Stagger lap splices where necessary to maintain minimum 1 bar diameter and 1 inch clearance between bars at splice.

2. Noncontact Splice: Lapped bars shall be spaced apart a minimum of 1 bar diameter and 1 inch to permit the encasement of the entire surface of the bar in concrete. Bars shall not be spaced farther apart than one-fifth of the lap length and 6 inches maximum. Whenever practical, use noncontact splices, with 4 inch minimum clear spacing, for shotcrete construction.
 - a. Use only noncontact lap splices at shotcrete construction.
 3. Stagger splices of bundled bars so that splices do not overlap.
 4. Welded Wire Fabric: Overlap outermost cross wires of each piece one wire space plus 2 inches. Wire or clip together at maximum 3foot spacing. Stagger splices in one direction.
- G. Mechanical Splices: Make splices in accordance with applicable Evaluation Report. Maintain specified concrete cover at couplers. Stagger mechanical splices as necessary to maintain clearances.
- H. Welding:
1. Welding is not permitted unless specifically detailed on plans or approved by Owner's Representative.
 2. Conform to requirements of AWS D1.4 using qualified procedures.
 3. Welding shall not be done within two bar diameters of any bent portion of a bar which has been bent cold.
 4. Do not tack weld crossing bars for assembly of reinforcement, supports, or embedded items.
- I. Smooth Dowels: Install at locations shown and accurately positioned at right angles to joint being doweled. Dowels shall be rigidly supported during concrete placement and one end of dowel shall be coated with bond breaker.
- J. Reinforcement shall be free of mud, oil or other materials that may reduce bond at the time concrete is placed. Reinforcement with tightly adhered rust or mill scale will be accepted without cleaning; remove loose rust.
- K. Field Straightening: Bar reinforcement shall not be field bent after being embedded in hardened concrete. Reinforcement that is accidentally bent, up to a 1:2 bend (30 deg) and not severely kinked, will be permitted to be straightened subject to the approval of the Owner's Representative. #7 and smaller bars may be straightened cold. Larger bars shall be preheated prior to bending in accordance with the provisions of ACI 301.
- L. Epoxy-Coated Bar Reinforcement:
1. Carefully handle and install bars to minimize job site patching. Use plastic or epoxy-coated bar supports to protect coating from physical damage during placement.
 2. Do not place epoxy-coated bars in contact with uncoated metal surfaces.
 3. Protect coating from damage.
 4. Use coated bar tie wire. Do not cut coating on bars
 5. Wrap exposed reinforcing dowels to protect coating from abrasion and weather damage.
 6. Epoxy coated reinforcement shall not be field bent except as noted on Drawings.
 7. It is not expected that coated bars, when in final position, ready for concrete placement will be completely free of damaged areas. However, numerous nicks and scrapes which expose bare steel will not be allowed regardless of the state when they occur subsequent to the coating in plant. Refer to Section 3.2 for patching of minor coating damage.

3.2 FIELD QUALITY CONTROL

- A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section "Quality Requirements".
- B. Testing Laboratory will:
1. Special Inspect placement of reinforcement for conformance with the Contract Documents, as required by CBC Table 1705A.3. Exceptions 1 through 4 noted in CBC Section 1705.3 do not pply.

2. Special Inspect installation of mechanical couplers in accordance with requirements of applicable Evaluation Report.
3. Special Inspect welding as required by CBC Table 1705A.3.1 and AWS D1.4, for compliance with AWS D1.4; including checking materials, equipment, procedure and welder qualification as well as the welds. Inspector will use nondestructive testing or any other aid to visual inspection that he deems necessary to assure the adequacy of the weld.
4. Observe the straightening of bent reinforcing. Where warranted by severity of bend, Inspector will pull test reinforcing to specified yield strength after straightening.

END OF SECTION

SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
 - 1. Refer to Section 018113 for LEED requirements related to this Section.

1.2 SUMMARY

- A. This Section includes:
 - 1. Cast-in-place concrete, unless otherwise noted.
 - 2. Granular base and underslab vapor retarder assembly beneath building slab-on-ground.
 - 3. Preparation of existing concrete surfaces to receive new concrete.
 - 4. Construction joint waterstops.
 - 5. Grout for baseplates and bearing plates.
- B. Related Sections:
 - 1. Section 018113 – Sustainable Design Requirements.
 - 2. Section 031000 – Concrete Forming.
 - 3. Section 032000 – Concrete Reinforcing.
 - 4. Section 032500 – Post-tension Concrete.
 - 5. Section 033300 – Architectural Concrete: For additional requirements to achieve acceptable visual quality for Architectural Concrete elements.
 - 6. Section 033500 – Concrete Finishing: For finishing and curing of floor surfaces that do not receive a floor covering.
 - 7. Section 033700 – Shotcrete.
 - 8. Division 07 Section – Vapor Emission and Alkalinity Control for New Concrete, for curing compound for floor surfaces to receive glue-adhered floor finishes.
 - 9. Division 09 Section – Resilient Sheet Flooring: For finishing, curing, and treatment of floors surfaces to receive glue-adhered floor finishes.
 - 10. Division 31 Sections for concrete for earthwork and pile foundations.
 - 11. Division 32 Sections for concrete for paving and site work.

1.3 REFERENCES

- A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.
- B. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section. Use applicable year of adoption or revision as published in ACI 301.
- C. ACI: Standards of the American Concrete Institute (ACI) apply where designated in this section. Use applicable year of adoption or revision as published in ACI 301.

1.4 DEFINITIONS

- A. Shrinkage Controlled Concrete: Concrete with shrinkage less than 0.040% when tested in accordance with ASTM C157 (SEAONC modified).
- B. Supplementary Cementitious Material (SCM). Materials included in concrete mix in addition to or as a replacement for cement, and that contribute to concrete properties through hydraulic and/or pozzolanic reactions. Fly ash, ground granulated blast furnace slag, silica fume, and natural pozzolans.
- C. SCM: Supplementary Cementitious Material. Fly ash, ground granulated blast furnace slag, silica fume, metakaolin.
- D. Awarding Authority: The state authority under which a California state project is awarded. The University of California shall serve as the awarding authority for non-California state projects
- E. Product Category Rule: The set of rules, requirements, and guidelines accepted by the awarding authority used to develop an EPD for a product group.
- F. Environmental Product Declaration (EPD): A document that reports a product's global warming potential and that is independently verified in accordance with ISO 14025:2006 Environmental labels and declarations - Type III environmental declarations – Principles and procedures,
- G. Manufacturer: An entity that produces the basic construction material that typically requires additional processing by a fabricator before use in a project.
 1. A concrete ready-mix plant is a manufacturer.
- H. Global Warming Potential (GWP): A measure of carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, and perfluorocarbons produced when manufacturing a product represented by an equivalent amount of CO₂, expressed as CO₂ eq.
- I. Product Category Rule (PCR): The set of rules, requirements and guidelines used to develop an EPD for a product group

1.5 SUBMITTALS

- A. Submittal procedures and administrative provisions are established by Division 01 Section, "Submittal Procedures".
- B. Mix design for each concrete mixture, including:
 1. Mixture proportions.

- a. Note method of adjusting mix proportions to account for variation in unit weight of lightweight aggregates.
2. Mixture properties.
 - a. Include compressive strength, slump, entrained air, and fresh density.
 - b. For lightweight concrete, include equilibrium density (ASTM C567 quick method).
- C. Laboratory test reports for concrete mixes.
 1. Compression test data (field experience method) or results of testing (trial batch method) used to establish proportions for each mix.
 - a. Submit sufficient data to represent the range of materials intended for use in the work, in accordance with ACI 318, Section 26.4.4.
 2. Alkali-silica reactivity test data where results of aggregate testing are other than innocuous.
 3. Shrinkage test data or results of testing used to establish mix proportions for shrinkage-controlled concrete.
- D. Material certificates of compliance with specified standards.
 1. Portland cement.
 2. Supplementary cementitious materials, including fly ash and slag cement.
 3. Aggregates, including gradation.
- E. Product data for proprietary materials and items, including admixtures, synthetic fiber reinforcement, bonding agents, finish materials, curing materials, vapor retarder, waterstops, and nonshrink grout.
- F. LEED Submittals: Report information necessary for LEED Certification. Refer to Section 018113 for requirements.
 1. Product Data for Credit MR 5.1: For each material, including its source, cost, and the fraction by weight that is considered regional and that has been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.
 2. Product Data for Credit EQ 4.1: Product data and material safety data sheets (MSDS) for installation adhesives, paints, coatings applied on-site on the interior of the building and products used on the interior of the building including printed statement of chemical composition and VOC content of each product used.
- G. Submit ticket to Owner's Testing Laboratory for each batch of concrete delivered, bearing the following information.
 1. Mix identification.
 2. Date and time of batching.
 3. Types and weights of cementitious materials. Sources, sizes and weights of coarse and fine aggregates. Weight of water added at plant. Types and volume of liquid admixtures added at plant.
 4. Volume of water and liquid admixtures added subsequent to initial batching. Time and place of addition.
- H. Products and methods used to strip curing compounds from floors to which other concrete, mortar or plaster is bonded, and evidence of their successful use in similar applications.
- I. Samples as requested by Testing Laboratory or Owner's Representative.
- J. Environmental Product Declarations (EPDs) for all steel reinforcing.
 1. Provide manufacturer's single-facility EPD or company-wide EPD that reports for each facility location supplying material.
 - a. EPD must be valid at the time of material installation.
 - b. The following EPDs are not acceptable:

- 1) Industrywide and/or industry-average product declarations.
 - 2) Fabricator's product declarations.
 - 3) Companywide declarations that do not report the GWP of its manufacturing facilities separately.
2. Include at a minimum:
- a. Product description
 - b. Product category rule under which the EPD was developed.
 - c. Body verifying that the EPD was developed according to ISO 14025 for the applicable PCR.
 - d. Expiration date
 - e. Manufacturer and manufacturer's location
 - f. Global warming potential measured in CO₂ eq.
 - 1) EPD must be valid at the time of material installation
3. EPD must be valid at the time of material installation.

1.6 QUALITY ASSURANCE

- A. Comply with applicable provisions of following codes and specifications, except where more stringent requirements are shown or specified.
1. ACI 301: Specifications for Structural Concrete for Buildings.
 2. ACI 318: Building Code Requirements for Reinforced Concrete.
- B. Concrete batch plant shall comply with the requirements of ASTM C94, Section 10, as certified by the National Ready Mixed Concrete Association.
- C. Concrete Supplier's Testing Laboratory shall comply with the requirements of ASTM E329 and be under the direction of a professional engineer, licensed in the State of California.
- D. If the test results of aggregates for potential reactivity (ASTM C289) are other than innocuous, concrete mixtures shall be tested in accordance with ASTM C1567. Tests shall indicate an expansion of less than 0.10 percent at 16 days age.
- E. Preconstruction Conference: Contractor shall convene a preconstruction conference at the job site a minimum of two weeks prior to placing concrete slab-on-grade. Attendees shall include at a minimum; General Contractors superintendent and foreman, the concrete sub-contractor, a representative from the flooring sub-contractor, a representative from the concrete batch plant, the Special Inspector, a representative from the Testing Laboratory, the architect, and the structural engineer. Inform attendees a minimum of seven days prior to convening meeting. Attendance via web or phone conference is acceptable. Purpose of meeting is to:
1. Review slab-on-grade flatness and levelness requirements.
 2. Review formed and placed elevated slab flatness and levelness requirements.
 3. Review concrete fill on steel deck slab flatness requirements.
 4. Review schedule for making flatness and levelness measurements.
 5. Formed and placed elevated slabs must be measured prior to removing shoring.
 6. All concrete should be measured as soon after placement as practical.
 7. Review anticipated maximum steel beam wet dead load deflection, contractor's placement, leveling, and finishing methods, and anticipated average and maximum additional fill due to beam and deck deflection.
 8. Review formed and placed elevated concrete fill on steel deck slab concrete mix design for acceptability for receiving adhesive for flooring and/or carpets and/or overlays intended as preparation for receiving adhesive for flooring and/or carpeting.
 9. Review formed and placed elevated slab concrete fill on steel deck finish requirements and contractor's proposed methods for meeting slab finish requirements for:
 - a. Floors receiving adhesive for flooring and/or carpets, and/or
 - b. Overlays intended as preparation for receiving adhesives for flooring and/or carpeting.

PART 2 – PRODUCTS

2.1 CONCRETE MATERIALS

- A. Cementitious materials and aggregates shall have a proven history of successful use together, or submit evidence satisfactory to Owner's Representative that aggregate will not react harmfully in presence of alkalis in cement.
- B. Cementitious materials and aggregates for concrete for exposed surfaces of like elements shall be from same source throughout the work.
- C. Cementitious Materials: Combination of Portland cement and supplementary cementitious materials; subject to limitations specified herein.
1. Portland cement: ASTM C150, Type I, II or V, low alkali.
 2. Fly ash: ASTM C618, Class C or Class F; except the maximum loss on ignition shall not exceed 1.0%.
 3. Slag cement, same as ground granulated blast furnace slag: ASTM C989, Grade 100 or 120.
 4. Silica Fume: ASTM C1240.
 5. Metakaolin: ASTM C618.
- D. Coarse Aggregates:
1. ASTM C33.
 2. Cleanness value shall not be less than 75 when tested in accordance with California Test 227, "Evaluating Cleanness of Coarse Aggregate".
 3. Aggregate shall contain no thin or elongated pieces. The length of any piece shall not exceed 2½ times the average thickness.
 4. Aggregate for Shrinkage Controlled Concrete shall be from one of the following sources, or approved equal: Orca (as supplied by Cemex or Hanson), Sechelt (as supplied by Hanson), limestone (Hanson), granite (Granite Rock's Aromas), or Clayton (as supplied by Hanson or Cemex).
 5. Aggregate for Lightweight Concrete: ASTM C330, rotary kiln-expanded shale or clay having surface sealed by firing. 3/8 inch size. As manufactured by Trinity Expanded Concrete & Shale, Utelite Corporation, or approved equal.
- E. Fine Aggregates:
1. ASTM C33.
 2. Sand equivalent shall not be less than 75 when tested in accordance with California Test 217, "Sand Equivalent".
- F. Water: Combined water consisting of potable water and reclaimed water from mixer wash-out operations; subject to limitations specified herein.
1. Provide 100% potable water for Architectural Concrete, Shrinkage Controlled Concrete, post-tensioned concrete, and lightweight concrete.
 2. Combined water for other uses may contain maximum 25% reclaimed water meeting requirements of ASTM C1602.
- G. Admixtures: Where mix contains more than one admixture, all admixtures shall be supplied by one manufacturer. Manufacturer shall certify that admixtures are compatible such that desirable effects of each admixture will be realized. Acceptable Manufacturers: BASF Construction Chemicals, W.R. Grace and Co., or Euclid Chemical Co.
1. General: Admixtures containing more than 0.05% chloride ions are not permitted.
 2. Air-entraining: ASTM C260. Where entrained air is not specified in Contract Documents, total air shall not exceed 3% by volume.
 3. Water-reducing: ASTM C494, Type A.
 4. Set-retarding: ASTM C494, Type B or Type D. Provide in necessary dosage to achieve desired set time.

5. Set-accelerating: ASTM C494, Type C, non-chloride. Provide in necessary dosage to achieve desired set time.
 6. Mid-range Water-reducing: ASTM C494, Type A/F, polycarboxylate formulation designed to minimize shrinkage. Provide in manufacturer's recommended (mid-range) dosage where specified, or where otherwise requested by Contractor to increase slump to facilitate pumping and/ or placement.
 7. High-range Water-reducing (superplasticizer): ASTM C494, Type F, polycarboxylate formulation designed to minimize segregation and shrinkage. Where specified, provide in manufacturer's recommended (high-range) dosage.
 8. Viscosity-modifying (VMA): ASTM C494, Type S. Provide in manufacturer's recommended dosage to facilitate pumping, subject to approval of Owner's Representative.
 9. Shrinkage-reducing (SRA): ASTM C494, Type S. Acceptable products: Eclipse® Floor 200 by W.R. Grace, MasterLife® SRA 035 by MasterBuilders, or approved equal.
 - a. Provide at one and one-half gallons per cubic yard of fresh concrete. Dosage may be adjusted at recommendation of concrete batch plant with architect's approval.
 - b. Where floor is intended to be ground and polished, verify compatibility of admixture with hardener.
- H. Micro-synthetic Fibers: Synthetic fibers, manufactured from 100 percent virgin homopolymer polypropylene resins, designed for use as secondary reinforcing to reduce plastic shrinkage in concrete. Shall conform to ASTM C1116 for Type III fiber reinforced concrete and the requirements of ICC-ES AC32, Section 3.1.1 (plastic shrinkage reinforcement). Acceptable products: MasterFiber™ M100 by BASF, Fibermesh® 300 by Propex, Grace Fibers™ by W.R. Grace, or approved equal.
1. Incorporate at a dosage rate as recommended by manufacturer.
- I. Macro-synthetic Fibers: Synthetic fibers, manufactured from polypropylene/polyethelene resins, designed for use as shrinkage and temperature reinforcing for concrete. Shall conform to ASTM C1116 for Type III fiber reinforced concrete and the requirements of ICC-ES AC32, Sections 3.1.1 (plastic shrinkage reinforcement) and 3.1.2 (shrinkage and temperature reinforcing). Acceptable products: MasterFiber™ MAC 100 by BASF, Novomesh® 950 by Propex, STRUX® 90/40 by W.R. Grace, or approved equal.
1. Unless otherwise indicated, incorporate at a dosage rate of 2.0 pounds per cubic yard.

2.2 RELATED MATERIALS

- A. Granular Base: Broken stone or crushed or uncrushed gravel, angular, free of deleterious matter, silt, clay, and/or organic matter. Gradation conforming to the following: 100% passing the 3/4-inch sieve, less than 10% passing the No. 4 sieve, and less than 2% passing the No. 200 sieve.
- B. Underslab Vapor Retarder: ASTM E1745, Class A plastic sheeting, complying with Section 033053.03 "Miscellaneous Concrete Accessories."
- C. Waterstop: Hydrophilic strip waterstop designed to stop water infiltration through cast-in-place concrete construction. Compound shall expand to seal and fill voids in construction joints to prevent water infiltration under continuous immersion and wet/dry cycling.
1. Typical: 1-1/4" x 1/2" trapezoidal strip reinforced with a poly scrim. Use at construction joints in concrete sections thicker than 8 inches with two layers of reinforcing steel. Acceptable products: Waterstop RX 101T by CETCO, Swellstop No. 594 by Sika, or approved equal.
 2. Thin Section: 3/4" x 3/8" half circle. Use at construction joints in concrete sections less than 8 inches thick or with a single layer of reinforcing steel. Acceptable products: Waterstop RX 102 by CETCO, Swellstop No. 596 by Sika, or approved equal.
 3. Adhesive: As recommended by waterstop manufacturer. Acceptable products: CETSEAL by CETCO, Swellstop primer adhesive by Sika, or approved equal.
- D. Evaporation Reducer: Monomolecular film-forming compound to prevent rapid drying of fresh concrete. Subject to compliance with requirements provide one of the following, or equal.

Eucobar, by Euclid Chemical, Co.
MasterKure ER 50, by BASF Corp.

- E. Moisture-retaining Cover (for curing):
1. Fabric: Cellulose or polypropylene fabric adhered to an unperforated, opaque impervious coating providing UV protection, non-staining; conforming to ASTM C171. Acceptable Products: UltraCure NCFä by Sika Corporation, Transguard 4000® by Reef Industries, Inc., or equal.
- F. Curing Compounds:
1. Type CC-1: Dissipating resin curing compound conforming to ASTM C309, Type 1, Class B, with a VOC less than 100 g/L. Acceptable products: 1100- by WR Meadows, Kurez DR-100 by Euclid Chemical Co., or approved equal
 2. Type CC-2: ASTM C1315, Type 1, Class A, curing and sealing compound. Minimum 30% solids, waterbased-, non-yellowing acrylic copolymer, with a VOC less than 100g/L. Acceptable products: Dayton Superior Cure & Seal 1315 EF (no known equal), or approved equal.
 3. Type CC-3: Water-based, reactive penetrant specifically formulated for concrete curing. Shall meet or exceed the water retention requirements of ASTM C1315 (0.40 kg/m² in 72 hours). Shall leave no surface residue and be compatible with patching compounds, paints and other wall coatings. Acceptable products: Sinak WCEä, by Sinak (no known equal).
 4. Type CC-4: Compound for vapor emission control that also serves as a curing compound. Shall meet or exceed the water retention requirements of ASTM C309 (0.55 kg/m² in 72 hours). Refer to Division 07 Section Vapor Emission and Alkalinity Control for New Concrete” for requirements and acceptable products.
- G. Floor Leveling Compound: High strength, Portland cement-based, nonshrink, self-leveling product designed specifically for leveling of concrete floors to receive adhered floor coverings. Compound shall install in thickness from featheredge to 1 inch in a single application. Minimum 4,000 psi compressive strength. Acceptable products: Ardex K 15® Self Leveling Underlayment Concrete, Mapei Ultraplan 1 Plus by Mapei International, Uzin NC 150 by Uzin Utz North America, or approved equal.
1. Primer: Product of underlayment manufacturer recommended for substrate conditions.
 2. Aggregate: Where thickness exceeds 1-inch, add well-graded, washed aggregate, of gradation and amount as recommended by underlayment manufacturer.
- H. Nonshrink Grout: Premixed, nonmetallic, noncorrosive product, conforming to ASTM C1107. Minimum usable working time of 30 minutes at flowable consistency over temperature range of 50 deg F to 85 deg F. Acceptable products: Masterflow^o 555 by BASF, Five Star® Grout by Five Star Products, Inc., N.S. Grout by Euclid Chemical Company, or approved equal.

2.3 MIXES

- A. Concrete mixes shall meet the GWP limits included in CGBC Table 5.409.3. Weighted averages for all concrete mixes used in the project calculated in accordance with CGBC Exception Equation 5.409.3.1 may be used
- B. All concrete normal weight except where noted in drawings or other articles this specification.
- C. Lean Concrete: Not used. Refer to Section 312300, "Structural Excavation and Fill", for controlled low strength material (CLSM).
- D. Mix "A": High SCM mix for foundation elements including spread footings, grade beams, elevator pits, and sump pits.
1. Compressive strength: 4,000 psi at 56 days. (ASTM C39).
 2. Slump: 5 inches, plus or minus 1inch tolerance (ASTM C143).
 3. Cementitious material: One of the following blends, measured by weight:
 - a. 50% Portland cement and 50% fly ash; or
 - b. 40 to 50% Portland cement, 30 to 40% slag, and 15 to 20% fly ash.
 - c. Where fly ash is not commercially available, 50% to 60% Portland cement, 40% to 50% slag.

4. Aggregate: Size 57 (1 inch) or Size 67 (3/4-inch) coarse aggregate blended with pea gravel to achieve a well graded blend.
- E. Mix "A-EC": Alternate mix for foundation elements including spread footings, grade beams, elevator pits, and sump pits.
1. Compressive strength: 4,000 psi at 28 days. (ASTM C39).
 2. Slump: 6 inches, plus or minus 1-inch tolerance (ASTM C143).
 3. Cementitious material: Shall include a minimum of 25% fly ash or slag, or combination of the two, measured by weight.
 4. Aggregate: Size 57 (1-inch) or Size 67 (3/4-inch) coarse aggregate (3/4-inch) blended with pea gravel to achieve a well graded blend.
- F. Mix "B": For slab-on-ground, normal-weight fill over steel deck, curbs and equipment pads, stair pan fills.
1. Compressive strength: 4,000 psi at 28 days (ASTM C39).
 2. Slump: 6 inches, plus or minus 1-inch tolerance (ASTM C143).
 3. Cementitious material: Total cementitious material shall not be less than 550 lbs per cubic yard.
 - a. Contractor may include up to a total of 20% fly ash, ground granulated blast furnace slag, or a combination of the two, at their option. Contractor shall consult with concrete finishing sub-contractor to confirm the quantity of fly ash and ground granulated blast furnace slag included in the concrete mix.
 4. Aggregate: Size 57 (1-inch) coarse aggregate.
 - a. Coarse aggregate shall be from specified source for Shrinkage Controlled Concrete. Do not blend pea gravel with shrinkage controlled aggregates.
 5. Admixtures: Mid-range, water-reducing admixture at necessary dosage to provide adequate slump and workability at specified water content.
 6. Limit total water to minimum required for complete cementitious material hydration, anticipated at between 275 lbs per cubic yard and 285 lbs per cubic yard maximum.
 7. Limit water-to-cementitious material ratio to 0.45 by weight.
- G. Concrete required to satisfy CGBC Material Conservation and Resource Efficiency.
1. Concrete mix shall include supplementary cementitious materials and shall be proportioned to satisfy the following equation:
 - a. $F/25 + SL/50 + UF/12 > 1.0$, where F = class F fly ash, SL = ground granulated blast furnace slag or class C fly ash, and UF = silica fume or metakaolin.
- H. Patching Mortar: One part Portland cement to two parts sand. At exposed surfaces, substitute white cement as necessary to match color of surrounding concrete.
1. Intended for use for patching of form ties and bug holes. Not suitable for repairing large defects; provide pre-packaged repair mortar suitable for size, shape, and location (horizontal, vertical, or overhead surface) of defect and approved by Owner's Representative.

2.4 PROPORTIONING

- A. Contractor shall determine the mix proportions for concrete in conformance with these specifications.
- B. Proportion mixes in accordance with ACI 301, on the basis of field experience or trial batches.
1. When trial batch method is used, trial batches shall be proportioned by Contractor's Design Laboratory that conforms to specified quality assurance requirements.
 2. Conform to additional requirements of ACI 211.2 for lightweight concrete.
- C. Proposed mixes shall produce concrete to strengths specified with adequate workability and proper consistency to permit concrete to be conveyed by pumping and worked into forms and around reinforcement without excessive segregation or bleeding.

- D. The total chloride ion content, calculated on the basis of mix proportions, shall not exceed the limits specified in ACI 318 Table 19.3.2.1 when tested per ASTM C1218 at age between 28 and 42 days inclusive. The total chloride ion content shall not be allowed to exceed 0.30% for any use.
- E. Mix design adjustments may be requested by Contractor when job conditions or test results warrant. Revised mix design must be submitted to and accepted by Owner's Representative before using in work.
 - 1. Approved set-accelerating and set-retarding admixtures may be used to control set times when warranted by weather conditions, without resubmittal of mixes.
 - 2. Batching weight of lightweight aggregates shall be adjusted to maintain a constant volume of aggregate, without resubmittal of mixes.

2.5 CONCRETE MEASUREMENTS AND MIXING

- A. Materials for concrete shall be measured by weighing the aggregates and cement using equipment that is suitable, designed and constructed for this purpose. Each size of aggregate and the cement shall be weighed separately. The accuracy of all measuring devices shall be such that quantities be measured to within the following percentages of the desired amount: 1% for cement and water, 2% for aggregates, and 3% for admixtures. Mixing water and all admixtures shall be measured by volume.
- B. All concrete shall be machine mixed in accordance with ACI 318, Section 26.5. Deposit concrete into final position within 90 minutes of introduction of cement.
 - 1. Mixing time shall be reduced in hot weather in accordance with Hot Weather Concreting provisions of this Section.
 - 2. Mixing time shall be increased to accommodate project conditions, only with prior written approval of Owner's Representative and subject to use of set retarders, control of revolutions of mixing drum and monitoring of concrete temperature.
- C. After initial batching, additions shall be limited to water, high range water reducers and non-chloride accelerators, subject to the following:
 - 1. Additions shall be made only in the presence of Testing Laboratory, using suitable calibrated devices.
 - 2. Water additions shall not exceed water-to-cementitious ratio requirements and/or maximum water content requirements.
 - 3. Following addition of HRWR or accelerator admixtures, complete a minimum of 70 revolutions or 5 minutes of mixing to assure a consistent mixture.

2.6 SOURCE QUALITY CONTROL

- A. Inspection and Testing will be performed under provisions of Division 1.
 - 1. Testing Laboratory will review mix designs and certificates of compliance for materials Contractor proposes to use.
- B. Batch Plant Inspection:
 - 1. An approved special inspector from the Owner's Testing Laboratory shall review mix proportions with the licensed weighmaster at the start of each day's placement and observe the first batching.
 - 2. Licensed weighmaster to positively identify materials as to quantity and certify to each load by ticket.
 - 3. Tickets shall be transmitted to the inspector of record by a truck driver with load identified thereon. The inspector will not accept the load without a load ticket identifying the mix and will keep a daily record of placements, identifying each truck, its load and time of receipt and approximate location of deposit in the structure and will transmit a copy of the daily record to the enforcement agency.
 - 4. At the end of the project, weighmaster shall furnish an affidavit to the enforcement agency certifying that concrete furnished conforms in every particular to proportions established by mix designs.

PART 3 – EXECUTION

3.1 GENERAL

- A. Examine units of work to be cast and verify that:
 - 1. Construction of formwork is complete.
 - 2. Required reinforcement, inserts, and embedded items are in place and securely held.
 - 3. Concrete-receiving places are free of debris and excess water.
- B. Protect finished surfaces adjacent to concrete-receiving places.

3.2 CONSTRUCTION JOINT PREPARATION

- A. Horizontal Joints: Remove entire surface to expose clean aggregate solidly embedded in mortar matrix to full 1/4-inch amplitude. Do not leave laitance, loosened particles of aggregate or debris at surface.
 - 1. At Contractor's option, use chemical surface retarder as an aid to joint preparation.
- B. Vertical Joints: Remove formwork and coatings to expose clean and sound concrete. Joints that are formed and keyed in accordance with drawings need not be intentionally roughened.
- C. Waterstops: Provide at construction joints in below grade pits and where indicated on Drawings. Install waterstops in accordance with manufacturer's written instructions, using adhesive. Tightly butt ends of adjoining sections; do not overlap. Protect waterstop from wetting prior to concrete placement; replace waterstop that has partially hydrated.
 - 1. Place typical waterstop with 3 inches minimum cover to concrete surface exposed to water, and between layers of reinforcing.
 - 2. At thin sections, place waterstop with 2 inches minimum cover nearest to face of concrete exposed to water.

3.3 PREPARATION FOR SLAB-ON-GROUND CONSTRUCTION

- A. Place granular base to thickness specified on Drawings. Consolidate and smooth surface with a vibratory plate.
- B. Place underslab vapor retarder under all slabs on grade in accordance with Section 033053.03 "Miscellaneous Concrete Accessories," unless otherwise indicated.

3.4 PLACING

- A. Examine units of work to be cast and verify that:
 - 1. Construction of formwork is complete.
 - 2. Required reinforcement, inserts, and embedded items are in place and securely held.
 - 3. Concrete-receiving places are free of debris and excess water.
- B. Protect finished surfaces adjacent to concrete-receiving places.
- C. Notify Owner's Representative at least 24 hours before placing concrete.
- D. Placing Record: Record time and date of casting concrete in units of building; maintain record open to inspection by the Owner's Representative.
- E. Convey concrete as rapidly and directly as practicable to preserve quality and to prevent segregation.
 - 1. Concrete discharge shall be complete within 90 minutes after the introduction of mixing water to the cement and aggregates or, the introduction of the cement to the aggregates or, 300 revolutions of the mixing drum, whichever comes first.

- a. The 90-minute and 300 revolution limits may be waived when set retarding admixtures are included in the concrete mix and with the architect's approval. Concrete shall have retained sufficient slump at the time of placement to be properly placed and consolidated without the addition of water.
- F. Cold Weather Placement: When concrete is likely to be subjected to freezing temperatures within 24 hours or when placing concrete at air temperatures less than 40 deg F, the temperature of the concrete at the point of placement shall be at least 55 deg F for sections thinner than 12 inches and 50 deg F for sections thicker than 12 inches. Do not exceed this temperature by more than 20 deg F. Use only approved accelerating admixtures.
- G. Hot Weather Placement: When air temperature exceeds 80 deg F, take special precautions to prevent slump loss, rapid setting, and plastic shrinkage; including but not limited to:
 1. Cool ingredients before mixing to maintain concrete temperature at point of placement below 90 deg F.
 2. Cover reinforcing steel with water-soaked burlap, so that steel temperature will not exceed ambient air temperature.
 3. Convey and deposit concrete as rapidly as practicable, such that concrete temperature does not exceed 90 deg F at point of placement.
 4. Apply evaporation reducer immediately after screeding.
- H. Placing Concrete in Forms:
 1. In depositing concrete in columns or walls, place concrete in a manner that will prevent segregation and accumulation of hardened concrete on the forms or metal reinforcement above the level of the concrete.
 - a. Limit concrete free fall to four feet maximum.
 2. Deposit concrete in horizontal layers and in a manner to avoid inclined joints. Place each layer while preceding layer is still plastic to avoid cold joints.
 3. Keep forms and reinforcement clean above pour line.
 4. Do not use vibrators to transport concrete in forms.
- I. Consolidating:
 1. Use internal vibrators for thorough consolidation of all concrete.
 2. Use size and power recommended by ACI 309 for the element of work.
 3. Use consolidation techniques that minimize entrapped air; refer to ACI 309.
 4. Do not place vibrators against reinforcement or forms.
- J. Construction joints shall conform to typical details and be located where shown on Drawings or approved by the Owner's Representative. Horizontal joints in walls and columns shall be at the underside of slabs. Place beams, girders, brackets, column capitals, haunches, and drop panels at the same time as the slabs.
- K. Floor Slabs on Steel Framing:
 1. Deposit concrete working outward from beam centers to avoid overloading steel deck.
 2. Maintain specified concrete thickness over steel deck as a minimum. Increase thickness as required to compensate for deflection of steel deck.

3.5 FINISHING FOR NON-FORMED SURFACES

- A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces.
- B. Finish Schedule: Refer to Article 3.11, "Finish Schedule" for finish types and locations. Refer to Division 03 Section "Concrete Finishing" for specialty finishes of exposed to view concrete.

- C. Flatness/Levelness Tolerances: Measure floors for flatness (SOF_F) and levelness (SOF_L) according to the method of ASTM E1155, within 72 hours after slab finishing. Floors shall conform to tolerances of ACI 117 listed in Finish Schedule.
1. Exception: Tolerance for levelness does not apply to floors supported by steel framing; measure floor levelness for information only.
 2. Corrective action: Failure to achieve the specified tolerances will require remedial action, including grinding and/or application of leveling materials. The cost of remedial action will be borne by the Contractor.
- D. Slab Finishes:
1. Scratch Finish: Place, consolidate, strike off, and level concrete. Roughen surface with stiff brooms or rakes prior to final set.
 2. Float Finish: Place, consolidate, strike off and level concrete. Do not work further until concrete is ready for floating. Consolidate surface with a bladed power float with float shoes or a powered disk float, or by hand floating if area is small or inaccessible to power driven floats. Repeat float passes until surface conforms to specified tolerances and is left with a uniform, smooth, granular texture.
 3. Trowel Finish: After applying float finish, power-trowel the surface. Continue troweling passes until surface is planed to the specified tolerance and uniform in texture. Do not burnish floors intended to receive floor coverings. Hand trowel the surface smooth and free of trowel marks.
 4. Broom Finish: After applying float finish roughen surface by drawing a fiber bristle broom, not less than 24 inches wide, across surface perpendicular to main traffic route. Produce even texture from edge to edge, lapping adjacent strokes slightly to produce uniform pattern.
 - a. Obtain Owner's Representative's approval for texture of final finish before application.
 5. At lightweight concrete, take measure to prevent creating a densified surface layer.
 - a. Ensure bleed water has evaporated from concrete. Soft-trowel finish, do not hard trowel. Limit trowel passes to minimum possible.

3.6 FINISHES FOR FORMED SURFACES

- A. General: Perform subsequent finishing operations as soon as practical after stripping formwork, except as specifically noted.
- B. Finish Schedule: Refer to Article 3.11, "Finish Schedule" for finish types and locations. Refer to Division 03 Section "Concrete Finishing" for specialty finishes of exposed to view concrete.
- C. Surface Finish – 1.0 (Rough Formed):
1. No formwork facing material is specified.
 2. Patch voids larger than 1½ in. wide or 1/2 in. deep.
 3. Remove projections larger than 1 in.
 4. Tie holes need not be patched.
 5. Surface tolerance Class D as specified in ACI 117.
- D. Surface Finish – 2.0 (Smooth-formed):
1. Plywood formwork facing.
 2. Patch voids larger than 3/4 in. wide or 1/2 in. deep.
 3. Remove projections larger than 1/4 in.
 4. Patch tie holes.
 5. Surface tolerance Class B as specified in ACI 117; except Class C shall be acceptable where finish surface is not exposed (pits, surfaces to receive waterproofing, etc.) subject to leveling abrupt offsets as required to accept application of finish materials or waterproofing.
- E. Surface Finish – 3.0 (As-cast exposed-to-view): Concrete shall have uniform as-cast surface with minimal additional finishing being anticipated or required.
1. Patch voids larger than 3/4 in. wide or 1/2 in. deep, surface blemishes will not be filled.

2. Remove projections larger than 1/8 in. by grinding without marring surface.
 3. Fill tie holes and strike flush with adjacent surfaces, except as otherwise noted.
 4. Surface tolerance Class A as specified in ACI 117.
 5. Mockup of concrete surface appearance and texture required.
- F. Sandblasted Finish: After obtaining as-cast, exposed-to-view surface, light sandblast, sufficient to expose fine aggregate with occasional exposure of coarse aggregate, to produce uniform color and a degree of reveal of approximately 1/16 inch.
- G. Sacked Finish: After stripping formwork, thoroughly wet concrete surface, apply grout to fill surface blemishes. Remove all traces of grout from surface by rubbing with clean burlap. Continue curing.
1. Grout: Combine one part cement to one and one-half parts sand by volume, and a 50:50 mixture of acrylic bonding admixture and water to form the consistency of a thick paint. Blend standard Portland cement and white cement in amounts determined by trial patches so that final color of dry grout will match adjacent surfaces.
- H. At tops of walls and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces.

3.7 CURING AND PROTECTION

- A. General: Start initial curing as soon as free water has disappeared from concrete following finishing. Keep concrete continuously moist for 7 days minimum after placement.
1. Subject to approval of Owner's Representative, application of curing compound may be delayed when specialty compound for moisture vapor emission is used for curing, usually 4 to 24 hours. Slab shall be carefully monitored for moisture content at the surface and compound shall be applied prior to evaporation rate exceeding moisture emission rate.
- B. Curing Methods:
1. Curing compound: Apply specified curing compound as soon as final finishing operations are complete. Uniformly apply two coats of compound in a continuous operation with second coat at right angles to first. The total coverage for the two coats shall be 200 square feet maximum per gallon of undiluted compound unless otherwise recommended by the manufacturer's written instructions. The compound shall form a uniform, continuous, coherent film that will not check, crack, or peel. Immediately apply an additional coat of compound to areas where the film is defective. Recoat concrete surfaces subjected to rainfall within 3 hours after the curing compound application. Maintain compound on the concrete surface throughout the curing period and immediately repair any damage.
 - a. Use Type CC-1 compound, unless otherwise designated.
 - b. Use Type CC-2 curing and sealing compound for interior floors that remain exposed to view in completed construction. At Contractor's option, use CC-1 for initial curing; strip and apply CC-2 curing and sealing compound at a later date.
 - c. Use Type CC-3 penetrant-type compound for surfaces to receive paint, fluid applied waterproofing or other coatings.
 - d. Use Type CC-4 compound for floor areas scheduled to receive glue-adhered floor finishes. Refer to Division 07 Section "Vapor Emission and Alkalinity Control for New Concrete" for requirements.
 2. Moisture-retaining cover: As soon as concrete is sufficiently set to permit application without marring surface, unroll cover over the entire area, laid smooth without folds or bunches of material. Lay blanket in accordance with manufacturer's instructions, overlapping edges a minimum of 6 inches and extending ends 12 inches beyond area of concrete to be cured. Immediately repair holes or tears that occur within first 5 days using sheeting material and waterproof tape.
 - a. Curing paper is preferred cover for slabs to receive adhered floor finishes.
 - b. Laminated burlap is preferred cover for concrete with water to cementitious material ratio less than 0.42.

- c. Prewet laminated burlap sheeting as installation progresses.
 - d. Maintain cover in place for 7 days for normal weight concrete; cover may be removed in 5 days for lightweight concrete.
3. Moist curing: Continuous misting, sprinkling or ponding. Intermittent wetting is not acceptable.

SG – Please confirm the curing compounds we should specify as it relates to your finishes.

- C. Limitations: Accomplish curing by one of the specified methods, subject to the following limitations.
1. Moisture-retaining cover curing will be the only acceptable method(s) for floors that are scheduled to receive adhered floor finishes.
 2. Compound curing will only be permitted for surfaces to which other concrete, mortar or plaster is bonded if compound is stripped from concrete surface.
 3. Refer to Division 03 Section "Concrete Finishing" for curing of exposed to view slab surfaces scheduled to receive special floor finish.
- D. Cold Weather Requirements: Protect concrete from freezing during the first 7 days after placement.
- E. Hot Weather Requirements: When hot weather conditions will cause an evaporation rate exceeding 0.2 pounds of water per square foot per hour, as determined by Figure 2.1.5 of ACI 305, cure for initial 24 hours minimum by moisture retaining cover methods.

3.8 SAW CUT JOINTS

- A. Construct contraction joints in slabs-on-grade using saw cuts 1/8 inch wide by one inch deep, unless otherwise indicated.
- B. If joint pattern is not shown, provide joints to create approximately square panels not exceeding 30 feet in either direction and located to conform to bay spacing wherever possible (at column centerlines, half bay, etc.).
- C. Sawcut as soon as concrete will bear the weight of equipment and operator, usually 1 to 4 hours after finishing. Perform sawcut with early-entry dry-cut saw. Ensure that saw does not ride up over hard or large coarse aggregate. Change saw skid plates in accordance with manufacturer's recommendations as required to control raveling and spalling at joint edges.
- D. Perform all cuts cleanly and smoothly to a constant and equal depth in as continuous an operation as possible to avoid misalignment of joints. Use only experienced personnel and forms or templates as required to achieve consistent lines.

3.9 CLEANING, PATCHING AND DEFECTIVE WORK

- A. Cleaning: Remove curing compounds, form release agents and other materials employed in concrete work that prevent proper application of finishes, sealants, waterproofing materials, or other treatments. Use positive method, as recommended by manufacturer, to achieve complete removal.
1. For floors scheduled to receive glue-adhered floor finishes, chemically strip Type CC-1 curing compound 7 days minimum to 14 days maximum following placement.
- B. Repair of Formed Surfaces: Immediately after form removal, cut out honeycombs, rock pockets, and voids. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat surface of void with neat cement paste. Immediately fill and compact with patching mortar.
1. Use patching mortar for form ties and for minor repairs.
 2. Use pre-packaged, shrinkage-compensated structural repair mortar, acceptable to Owner's Representative, for larger repairs.
- C. Repair of Floor Slabs for Flatness and Levelness: Repair floors as necessary to achieve specified finish tolerances and as otherwise required for proper installation of building components.

1. After concrete has cured at least 28 days, correct high areas by grinding.
2. Correct low areas with underlayment installed according to manufacturer's written instructions, including but not limited to priming prepared surfaces, to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.

3.10 GROUTING BASEPLATES

- A. Prior to erection, clean and roughen concrete surface beneath baseplate; clean bottom surface of baseplate of bond-reducing materials. After columns have been positioned and plumbed, flow nonshrink grout solidly between bearing surfaces to ensure no voids remain. Comply with manufacturer's recommendations for mixing, placing, finishing and curing of grout.

3.11 FIELD QUALITY CONTROL

- A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section "Quality Requirements".
- B. Testing Laboratory will:
 1. Collect and review tickets for each batch of concrete delivered. Annotate water or admixtures added subsequent to batching.
 2. Special Inspect concrete construction, as required by CBC Table 1705A.3, for conformance with the Contract Documents.
 3. Compressive strength: Sample and test concrete for compressive strength at the frequency prescribed by ACI 318, Section 26.12.2 and CBC Section 1905A.1.15. A sample shall be the average of two 6 by 12 inch cylinders or three 4 by 8 inch cylinders. Cylinders shall be molded and cured in accordance with ASTM C31 and tested in accordance with ASTM C39 at 28 days.
 - a. On first day's placement of each concrete mix, mold two additional cylinders and test at 7 days. 7-day testing is not required thereafter.
 - b. Where design strength is specified at 56 days, perform testing at 56 days. On first day's placement of concrete mix, mold four additional cylinders; test 2 at 7 days and 2 at 28 days. 7-day and 28-day testing is not required thereafter.
 - c. For post-tensioned concrete, mold an additional cylinder for each sample for testing prior to stressing.
 - d. For lightweight concrete, take cylinders at point of placement.
 4. Slump: ASTM C143; one test at start of placement and every two hours thereafter.
 - a. For lightweight concrete, test at truck and point of placement to monitor slump loss.
 5. Temperature: ASTM C1064; one test every two hours during hot weather. Make additional tests when warranted by delays in delivery.
 6. Air content: ASTM C173; one test hourly at point of placement for mixes with more than 3% air.
 7. Wet density: ASTM C138; sample and test lightweight concrete at truck at start of each day's placement. Continue testing until mixes achieve target density.
 8. Equilibrium density: ASTM C567; sample lightweight concrete every 2 hours at point of placement. Oven dry samples and test for dry density in accordance with ASTM C567. Report calculated equilibrium density in accordance with ASTM C567 "quick method", based on oven dry density plus 3 pcf.
 9. Nonshrink grout:
 - a. Inspect mixing and placing of nonshrink grout.
 - b. Test for compressive strength in accordance with ASTM C109. Make one sample for each 2 hours of grout placement.
- C. The Contractor shall pay Testing Laboratory for investigating of low-strength compressive test results in accordance with ACI 318, Section 26.12.4, except where results of test cylinders are not representative of in-place concrete.

3.12 FINISH SCHEDULE

- A. The concrete finish types specified in "Table 1 - Finishes for Non-Formed Surfaces" and "Table 2 - Finishes for Formed Surfaces", which follow, shall be used except as otherwise designated on drawings.
 - 1. Exposed surfaces that are scheduled to receive paint, sealers or other thin finish coatings shall be considered "Exposed-to-View".
 - 2. Exposed-to-view Curbs and Stair Risers: Provide monolithic finish by stripping forms while concrete is green and steel-troweling surfaces to a dense, hard finish with corners intersections and terminations slightly rounded.
- B. Refer to Section 031000, "Concrete Forming", for formwork requirements for exposed-to-view surfaces.
- C. Refer to Division 03 Section "Concrete Finishes" for specialty finishes. In case of conflict, the requirements of "Concrete Finishes" shall take precedence over the requirements herein.

TABLE 1: FINISHES FOR NON-FORMED SURFACES			
Surface	Finish	Tolerances	Curing
Floor to receive carpet	Trowel / do not burnish	Moderately Flat SOF _F = 25 SOF _L = 20	Fabric moisture retaining cover or CC-4
Floor to receive resilient flooring	Trowel / do not burnish	Flat SOF _F = 35 SOF _L = 20	Fabric moisture retaining cover or CC-4
Floor to receive thin-set tile	Trowel Refer to Division 09 for subsequent preparation	Flat SOF _F = 35 SOF _L = 20	Moisture retaining cover or CC-3
Floor to receive epoxy terrazzo	Trowel / do not burnish	Very Flat SOF _F = 45 SOF _L = 25	Moisture retaining cover (paper)
To receive bonded topping or mortar bed	Scratch	---	Moisture retaining cover
Exposed concrete (utility)	Trowel	Conventional SOF _F = 20 SOF _L = 15	CC-2 cure/seal or CC-1 cure removed and sealed with CC-2
Polished concrete floor	Trowel	Very Flat SOF _F = 45 SOF _L = 20	Moisture retaining cover
Parking	Swirl	---	CC-2
Roof	Float	---	CC-1

Note: Tolerance SOF_L does not apply to steel frame floors.

TABLE 2: FINISHES FOR FORMED SURFACES		
Surface	Finish	Notes
Concealed, except as otherwise noted.	SF-1.0	CC-1 curing where required per Concrete Forming
To receive waterproofing or cement plaster	SF-2.0	CC-1 curing where required per Concrete Forming, removed
Pits (inside face)	SF-2.0	CC-1 curing where required per Concrete Forming
Exposed to view, building interior utility areas	SF-2.0	CC-1 curing where required per Concrete Forming
Exposed to view, building interior, public areas	SF-3.0	Refer also to requirements for Architectural Concrete
Exposed to view, building exterior	SF-3.0	Refer also to requirements for Architectural Concrete

END OF SECTION

SECTION 033053.03 - MISCELLANEOUS CONCRETE ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes miscellaneous cast-in-place concrete materials, including the following:
 - 1. Underslab vapor retarder and accessories.
- B. Related Requirements:
 - 1. Division 03 Sections for cast-in-place concrete, formwork and reinforcing.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product, including installation and repair instructions.

PART 2 - PRODUCTS

2.1 UNDERSLAB VAPOR RETARDERS

- A. Vapor Retarder: ASTM E1745, Class A plastic sheeting, with a water vapor permeance less than 0.01 perms; minimum 15 mil film thickness, minimum 45 lb/in tensile strength, and minimum 2200 grams puncture resistance.
 - 1. Acceptable products:
 - a. Moistop Ultra 15 by Henry Company (Fortifiber Corporation)
 - b. Stego Wrap 15 mil Class A by Stego Industries.
 - c. Or equal.
 - 2. Provide manufacturer's recommended seam tape, double sided tape, termination tack strips, mastic or liquid flashing, and preformed pipe and penetration boots for sealing of edges, seams, and penetrations.
 - 3. Patch Material: Vapor retarder material of similar or better permeance, puncture resistance, and tensile strength as recommended by vapor retarder manufacturer.
 - 4. Termination Bar: Provide non-corrosive metal termination bar for below-slab vapor retarder with anchors to secure vapor retarder terminations.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Level and compact base material according to ASTM E1643 and civil and structural engineering drawings and specifications.
- B. If a capillary break is required by the geotechnical report or is shown on Drawings, cover with at least 2 inches of fine-grained fill. For granular base course, use a minimum 4-inch layer of compactable granular fill, avoiding concrete sand.
- C. Avoid puncturing vapor retarder. Inspect the vapor retarder for any punctures or damage that could compromise its effectiveness. Repair punctures according to vapor retarder manufacturer's instructions.
- D. Place concrete over vapor retarder as soon as possible.

3.2 UNDERSLAB VAPOR RETARDER INSTALLATION

- A. Sheet Vapor Retarders: Place, protect, and repair vapor retarder according to ASTM E 1643, ASTM F710, ACI 302.2R, manufacturer's written instructions, and applicable recommendations of NRMCA CIP-29. Apply requirements of geotechnical report. Unless otherwise indicated, provide underslab vapor retarders under all concrete slabs on grade.
1. Place underslab vapor retarder with longest dimension parallel with direction of pour, lapping seams 6 inches and sealing with manufacturer's recommended adhesive or pressure sensitive tape.
 2. Clean laps and penetrations where dirt or other debris may impair adhesion of seam tape or mastic.
 3. Seal penetrations (pipes, conduits, columns, utilities) with manufacturer's recommended penetration boot, mastic or liquid flashing, adhesive/sealant, and seam tape.
 4. Seal around penetrations through vapor retarder to create a monolithic membrane between the surface of the slab and the subgrade.
 5. Where vapor retarder is interrupted at interior or edge footings, lap vapor retarder 2 inches minimum over footing.
 6. Avoid driving non-permanent stakes through the retarder and repair penetrations if needed. Use reinforcing bar supports designed to minimize puncturing. If a blotter layer is used, ensure it is dry before concrete placement and protect it from precipitation.
 7. Avoid tearing vapor retarder sheets with rebar reinforcement, dowels, anchors, and other devices and accessories.
- B. Vapor Retarder Termination: At all perimeter terminations, and elsewhere as shown, install per ASTM E 1643, manufacturer written instructions and the following requirements:
1. Lay vapor retarder loosely, to prevent concrete from pulling on termination.
 2. Turn vapor retarder up at foundation walls or forms, and other conditions that may impede installation, such as exposed reinforcement, dowels, waterstops, etc.
 3. Terminate edges of loosely laid vapor retarder at a height elevation consistent with the top of the slab.
 4. Secure vapor retarder in place by anchoring termination bar to vertical surface, with butyl tape between vapor retarder and substrate.
 5. Install expansion anchor in each predrilled hole.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: District will engage a qualified testing and inspecting agency to perform tests and inspections and prepare test reports.
- B. Installation Inspections: Engage underslab vapor retarder manufacturer's technical representative to inspect installation of system components to ensure compliance with manufacturer's written instructions and to ensure that a complete vapor retarder system and all related accessories are installed without deficiencies. Include review and inspection of materials to ensure correct products have been installed as indicated in approved Submittal.
- C. Do not place concrete until inspection agency has inspected and accepted vapor retarder installation, and damaged areas have been repaired.
- D. Underslab vapor retarder will be considered defective if it does not pass inspections.

3.4 PROTECTION

- A. Limit disturbance of vapor retarder and until concrete is placed. Avoid damaging the vapor retarder during construction. Prevent sharp crushed rock from being in direct contact and use a cushion or blotter layer if necessary.
- B. Be mindful of high foot traffic and extreme conditions. To greatest extent possible, do not allow construction personnel from walking on exposed vapor retarder sheets until concrete is placed.

3.5 REPAIRS

- A. Make repairs to vapor retarder and place slab in accordance with Division 03 Sections and as recommended by vapor retarder manufacturer's instructions.
 - 1. Repair vapor retarder damaged during placement of reinforcement or concrete with patch of vapor retarder material.

- B. Identify and repair any damage before concrete placement. Clean the damaged area. Seal small holes with tape. For larger damage, use a patch overlapping by 6 inches beyond edges of damaged area and seal the perimeter with tape. Ensure continuity with a patch for cut slabs.

END OF SECTION

SECTION 033300 - ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes cast-in-place architectural concrete including form facings, reinforcement accessories, concrete materials, concrete mixture design, placement procedures, and finishes.

1.2 DEFINITIONS

- A. Cast-in-Place Architectural Concrete: Formed concrete that is exposed to view on surfaces of completed structure or building and that requires special concrete materials, formwork, placement, or finishes to obtain specified architectural appearance.
- B. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.
- C. Design Reference Sample: Sample designated by Architect in the Contract Documents that reflects acceptable surface quality and appearance of cast-in-place architectural concrete.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place architectural concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Cast-in-place architectural concrete subcontractor.
 - 2. Review concrete finishes and finishing, curing procedures, construction joints, forms and form-removal limitations, reinforcement accessory installation, concrete repair procedures, and protection of cast-in-place architectural concrete.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
 - 1. Indicate amounts of mixing water to be withheld for later addition at Project site.
- C. Formwork Shop Drawings: Show formwork construction including form-facing joints, rustications, construction and contraction joints, form joint-sealant details, form tie locations and patterns, inserts and embedments, cutouts, cleanout panels, and other items that visually affect cast-in-place architectural concrete.
- D. Placement Schedule: Submit concrete placement schedule before start of placement operations. Include locations of all joints including construction joints.
- E. Samples: For each of the following materials:
 - 1. Form-facing panel.

2. Form ties.
3. Form liners.
4. Coarse- and fine-aggregate gradations.
5. Chamfers and rustications.

- F. Samples for Verification: Architectural concrete Samples, cast vertically, approximately 18 by 18 by 2 inches, of finishes, colors, and textures to match design reference sample. Include Sample sets showing the full range of variations expected in these characteristics.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For each of the following:
1. Cementitious materials.
 2. Admixtures.
 3. Form materials and form-release agents.
 4. Repair materials.
- B. Material Test Reports: For the following, by a qualified testing agency:
1. Aggregates. Include service record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Comply with Division 03 Section "Cast-in-Place Concrete."
- B. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
1. ACI 301, "Specification for Structural Concrete," Sections 1 through 5 and Section 6, "Architectural Concrete."
 2. ACI 303.1, "Specification for Cast-in-Place Architectural Concrete."
- C. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.
- D. Field Sample Panels: After approval of verification sample and before casting architectural concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of three sets of full-scale panels, cast vertically, approximately 48 by 48 by 6 inches minimum, to demonstrate the expected range of finish, color, and texture variations.
1. Locate panels as indicated or, if not indicated, as directed by Architect.
 2. Demonstrate methods of curing, aggregate exposure, sealers, and coatings, as applicable.
 3. In presence of Architect, damage part of an exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
 4. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
 5. Demolish and remove field sample panels when directed.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

- A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for formwork and other form-facing material requirements.

- B. Form-Facing Panels for As-Cast Finishes: Steel, glass-fiber-reinforced plastic, or other approved nonabsorptive panel materials that will provide continuous, true, and smooth architectural concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
- C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will provide surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.
- D. Form Liners: Units of face design, texture, arrangement, and configuration to match design reference sample. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent surface treatments of concrete.
- E. Rustication Strips: Metal, rigid plastic, or dressed wood with sides beveled and back kerfed; nonstaining; in longest practicable lengths.
- F. Chamfer Strips: Metal, rigid plastic, elastomeric rubber, or dressed wood, 3/4 by 3/4 inch, minimum; nonstaining; in longest practicable lengths.
- G. Form Joint Tape: Compressible foam tape; pressure sensitive; AAMA 800, "Specification 810.1, Expanded Cellular Glazing Tape"; minimum 1/4 inch thick.
- H. Form Joint Sealant: Elastomeric sealant complying with ASTM C 920, Type M or Type S, Grade NS, that adheres to form joint substrates.
- I. Sealer: Penetrating, clear, polyurethane wood form sealer formulated to reduce absorption of bleed water and prevent migration of set-retarding chemicals from wood.
- J. Form-Release Agent: Commercially formulated, colorless form-release agent that will not bond with, stain, or adversely affect architectural concrete surfaces and will not impair subsequent treatments of those surfaces.
 - 1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
- K. Form Ties: Factory-fabricated, glass-fiber-reinforced plastic, removable ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
 - 1. Provide in the structural design of the forms the location of ties within the joints such that patches of tie holes will be in recessed joints.
 - 2. Furnish ties with tapered tie cone spreaders that, when removed, will leave holes 3/4 inch (19 mm) in diameter on concrete surface.

2.2 STEEL REINFORCEMENT AND ACCESSORIES

- A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for steel reinforcement and other requirements for reinforcement accessories.
- B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire fabric in place; manufacture according to CRSI's "Manual of Standard Practice."
 - 1. Where legs of wire bar supports contact forms, use CRSI Class 1, gray, plastic-protected or CRSI Class 2, stainless-steel bar supports.

2.3 CONCRETE MATERIALS

- A. Cementitious Material: Use cementitious materials and aggregates, of the same type, brand, and source, throughout Project complying with Division 03 Section "Cast-in-Place Concrete."

- B. Water: Potable, complying with ASTM C 94/C 94M except free of wash water from mixer washout operations.

2.4 ADMIXTURES

- A. Air-Entraining Admixture: ASTM C 260.
- B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
 - 1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 - 2. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
- C. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.
 - 1. Color: As selected by Architect from manufacturer's full range.

2.5 CURING MATERIALS

- A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.
- B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- C. Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.
 - 1. For integrally colored concrete, curing compound shall be pigmented type approved by color pigment manufacturer.
 - 2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.

2.6 REPAIR MATERIALS

- A. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
- B. Epoxy Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements.
 - 1. Types I and II, non-load bearing or Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete according to service loadings.

2.7 CONCRETE MIXTURES, GENERAL

- A. Prepare design mixtures for each type and strength of cast-in-place architectural concrete proportioned on basis of laboratory trial mixture or field test data, or both, according to ACI 301.
 - 1. Use a qualified independent testing agency for preparing and reporting proposed design mixtures based on laboratory trial mixtures.
- B. Proportion concrete mixtures as follows:
 - 1. Compressive Strength (28 Days): 3500 psi (24.1 MPa).
 - 2. Maximum Water-Cementitious Materials Ratio: 0.46.
 - 3. Slump Limit: 8 inches (200 mm) for concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch.
 - 4. Air Content: 5-1/2 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.

5. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch (19-mm) nominal maximum aggregate size.
- C. Cementitious Materials: For cast-in-place architectural concrete exposed to deicers, limit percentage, by weight, of cementitious materials other than portland cement according to ACI 301 requirements. Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.
- D. Limit water-soluble, chloride-ion content in hardened concrete to 0.30 percent by weight of cement.
- E. Admixtures: Use admixtures according to manufacturer's written instructions.
- F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.8 CONCRETE MIXING

- A. Ready-Mixed Architectural Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M and furnish batch ticket information.
 1. Clean equipment used to mix and deliver cast-in-place architectural concrete to prevent contamination from other concrete.
 2. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK

- A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for formwork, embedded items, and shoring and reshoring.
- B. Limit deflection of form-facing panels to not exceed ACI 303.1 requirements.
- C. In addition to ACI 303.1 limits on form-facing panel deflection, limit cast-in-place architectural concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:
 1. Class A, 1/8 inch (3.2 mm).
- D. Fabricate forms to result in cast-in-place architectural concrete that complies with ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."
- E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-in-place surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical. Kerf wood rustications, keyways, reglets, recesses, and the like, for easy removal.
 1. Seal form joints and penetrations at form ties with form joint tape or form joint sealant to prevent cement paste leakage.
 2. Do not use rust-stained steel form-facing material.
- F. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
- G. Chamfer exterior corners and edges of cast-in-place architectural concrete where indicated.

- H. Coat contact surfaces of wood rustications and chamfer strips with sealer before placing reinforcement, anchoring devices, and embedded items.
- I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
- J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.
- K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.
- L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.
- M. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and attach securely to prevent deflection and maintain stability of liners during concreting. Prevent form liners from sagging and stretching in hot weather. Seal joints of form liners and form liner accessories to prevent mortar leaks. Coat form liner with form-release agent.

3.2 REINFORCEMENT AND INSERTS

- A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for fabricating and installing steel reinforcement. Securely fasten steel reinforcement and wire ties against shifting during concrete placement.
- B. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

3.3 REMOVING AND REUSING FORMS

- A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.
 - 1. Schedule form removal to maintain surface appearance that matches approved field sample panels.
 - 2. Cut off and grind glass-fiber-reinforced plastic form ties flush with surface of concrete.
- B. Clean and repair surfaces of forms to be reused in the Work. Do not use split, frayed, delaminated, or otherwise damaged form-facing material. Apply new form-release agent.
- C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for cast-in-place architectural concrete surfaces.

3.4 JOINTS

- A. Construction Joints: Install construction joints true to line with faces perpendicular to surface plane of cast-in-place architectural concrete so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
 - 1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated.
 - 2. Form keyed joints as indicated. Align construction joint within rustications attached to form-facing material.
 - 3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.

4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
 6. Use bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- B. Contraction Joints: Form weakened-plane contraction joints true to line with faces perpendicular to surface plane of cast-in-place architectural concrete so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

3.5 CONCRETE PLACEMENT

- A. Before placing concrete, verify that installation of formwork, form-release agent, reinforcement, and embedded items is complete and that required inspections have been performed.
- B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.
- C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.
1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.
- D. Deposit concrete continuously between construction joints. Deposit concrete to avoid segregation.
1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
 2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 303.1.
 3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. Do not permit vibrators to contact forms.
- E. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents.
 4. Do not use chemical accelerators unless otherwise specified and approved in design mixtures.
- F. Hot-Weather Placement: Comply with ACI 301 and as follows:
1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.6 FINISHES, GENERAL

- A. Architectural Concrete Finish: Match Architect's design reference sample, identified and described as indicated, to satisfaction of Architect.
- B. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces.

1. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

C. Maintain uniformity of special finishes over construction joints unless otherwise indicated.

3.7 AS-CAST FORMED FINISHES

- A. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Remove fins and other projections exceeding specified limits on formed-surface irregularities. Repair and patch tie holes and defects.
- B. Form-Liner Finish: Produce a textured surface free of pockets, streaks, and honeycombs, and of uniform appearance, color, and texture.

3.8 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and with ACI 301 for hot-weather protection during curing.
- B. Begin curing cast-in-place architectural concrete immediately after removing forms from concrete. Cure according to ACI 308.1, by one or a combination of the following methods that will not mottle, discolor, or stain concrete:
 1. Moisture Curing: Keep exposed surfaces of cast-in-place architectural concrete continuously moist for no fewer than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.
 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for no fewer than seven days. Immediately repair any holes or tears during curing period; use cover material and waterproof tape.
 3. Curing Compound: Mist concrete surfaces with water. Apply curing compound uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

3.9 FIELD QUALITY CONTROL

- A. General: Comply with field quality-control requirements in Division 03 Section "Cast-in-Place Concrete."

3.10 REPAIRS, PROTECTION, AND CLEANING

- A. Repair and cure damaged finished surfaces of cast-in-place architectural concrete when approved by Architect. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved mockups.
 1. Remove and replace cast-in-place architectural concrete that cannot be repaired and cured to Architect's approval.
- B. Protect corners, edges, and surfaces of cast-in-place architectural concrete from damage; use guards and barricades.
- C. Protect cast-in-place architectural concrete from staining, laitance, and contamination during remainder of construction period.

- D. Clean cast-in-place architectural concrete surfaces after finish treatment to remove stains, markings, dust, and debris.
- E. Wash and rinse surfaces according to concrete finish applicator's written instructions. Protect other Work from staining or damage due to cleaning operations.
 - 1. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.

END OF SECTION

SECTION 033546 - CONCRETE FLOOR TREATMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes topically applied concrete floor treatments for exposed concrete finishing in locations indicated on Drawings. Concrete floor treatments include:
 - 1. Penetrating densifier/hardener used for dustproofing, sealing, and hardening concrete surfaces.
- B. Related Requirements:
 - 1. Concrete for sealed concrete, including concrete materials, mixture design, placement procedures, initial finishing, and curing is specified in Section 033000 "Cast-in-Place Concrete."

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review concrete placement and curing procedures, concrete finishing, and protection of sealed concrete before and after sealer application.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For liquid concrete floor treatments to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Verify compatibility of sealer material with concrete curing admixtures prior to concrete placement to ensure compatibility. Provide curing products and concrete admixtures that are compatible with finish coat in locations indicated to receive finish coat.
- B. Provide the following upon request:
 - 1. Qualification Data: For Installer and Testing Agency.
 - 2. Material Certificates: For each of the following, signed by manufacturer:
 - a. Hardener/sealer.

1.6 MOCKUPS

- A. Mockups: Build mockups to demonstrate aesthetic effects and set quality standards for materials and execution, including surface finish, typical joint treatment, tolerances, and standard of workmanship.
 - 1. A mockup is, or mockups may be, required to validate performance and appearance related characteristics (including but not limited to color, sheen, inherent surface variations, wear, abrasion resistance, chemical resistance, stain resistance, and slip-resistance), to ensure system performance as specified for the intended use, and to determine application methods and procedures of the finish flooring system..
 - a. Locate mockups in location to be concealed by subsequent flooring materials as directed by Architect.
 - b. Apply full-thickness mockups on minimum 48-inch-square floor area.
 - c. Demonstrate application, curing, finishing, and protecting of sealed concrete.
 - d. Simulate finished lighting conditions for Architect's review of mockups.

2. Engage an authorized testing agency to test mockup for slip-resistance after cure according to ANSI A137.1/A326.3. If values for dynamic coefficient of friction exceed indicated values, provide additional mockups applying manufacturer's recommended remediation procedures. Test each subsequent mockup for slip-resistance until flooring passes test. Do not proceed with application of concrete sealer on remaining portions of the Work until mockups pass testing.
3. After acceptance of test, when directed by Architect, prepare mockup floor area, including possible removal of floor sealer and any residual effects, as required by subsequent flooring manufacturer, and cover mockup area with scheduled flooring as instructed.

1.7 FIELD CONDITIONS

- A. Traffic and Stain Control: For cast-in-place concrete slabs scheduled to receive sealer, protect concrete from foot traffic, construction chemicals, spills, and stains prior to, and during sealer application to ensure uniform quality and look of freshly placed concrete.
- B. Environmental Limitations: Comply with sealer manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting sealer application.
- C. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during sealer application.
- D. Close spaces to traffic during sealer application and for 24 hours after application.

PART 2 - PRODUCTS

2.1 FLOOR TREATMENTS, GENERAL

- A. Source Limitations: Obtain sealer materials, including treatments and finishing products, from a single manufacturer.
- B. Dynamic Coefficient of Friction: Provide sealed concrete installed on walkway surfaces with dynamic coefficient of friction indicated as determined by testing identical products per ANSI A137.1/A326.3 DCOF AcuTest procedure.
 1. Dynamic Coefficient of Friction: Not less than 0.42 dry and 0.5 wet.
- C. VOC Content of Liquid-Applied Floor Coating Components: Not more than 50 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.2 FLOOR TREATMENT MATERIALS

- A. Dustproofing Hardener/Sealer: VOC-compliant, lithium-based, penetrating densifier, hardener, dustproofing and concrete sealer.
 1. Products: Subject to compliance with requirements, provide Pentra-Sil (HL) as manufactured by Convergent Concrete Technologies, LLC, or Architect approved equal with the following characteristics:
 - a. No surface filming.
 - b. UV-resistant.
 - c. Impact, wear, and abrasion resistant.
 - d. Chemical and stain resistant.
 - e. VOC Content: <50g/L

PART 3 - EXECUTION

3.1 EXECUTION, GENERAL

- A. Inspect condition of existing concrete to be sealed in the presence of Architect, finishing subcontractor, and sealer material manufacturer's representative. Determine whether repairs are required. If required, follow the preparation and application procedures for repairing material prior to sealing. If repair is not required, skip directly to sealer application procedures below.
- B. During and after curing, protect floors from staining and contamination.

3.2 PREPARATION

- A. Prepare and clean substrates according to concrete treatment manufacturer's written instructions. Concrete hardener/sealer may be applied to newly placed concrete or to existing cured and dry concrete.
- B. Newly Placed Concrete: Finish newly placed concrete and prepare for treatment according to floor treatment manufacturer's instructions.
- C. Existing Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with sealer or that provide a splotchy end product. Clean surface before application to remove any dirt, laitance, curing compounds or coatings that may prevent the floor hardener/sealer from penetrating the surface. Do not use citrus or acidic cleaners. If acidic or d-limonene cleaners have been used, neutralize the surface using an alkaline cleaner (TSP, Tide laundry detergent, etc.) according to manufacturer's instructions..
 - 1. Repair damaged and deteriorated concrete according to sealer manufacturer's written instructions.
 - 2. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
 - 3. If water moisture tests exceed manufacturer's stated limits, remediate according to manufacturer's instructions.
 - 4. Alkalinity and Adhesion Testing: Verify that concrete substrates have pH within acceptable range. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing.
- D. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates according to floor treatment manufacturer's written instructions.
- E. Protect adjacent surfaces during installation and finishing of concrete floor treatment.

3.3 APPLICATION

- A. Apply concrete treatment according to manufacturer's written instructions. Apply according to application methods and procedures as tested and approved in preconstruction mockup.
- B. Using a sprayer, apply concrete hardener/sealer evenly on the surface. Keep the surface wet with product for at least 20 minutes, adding more product where needed.
- C. On newly placed, machine-troweled concrete, apply hardener/sealer immediately after finishing, immediately after joints have been cut and cleaned, or anytime thereafter. As the material dries into the surface, spread out any puddles with a soft bristle broom or a flat microfiber pad.
- D. Allow floor treatment to cure according to manufacturer's written instructions. Prevent contamination during application and curing processes.

- E. Using a stiff broom or auto-scrubber, remove any excess residue that forms on the surface after the product dries.

3.4 PROTECTION

- A. Protect sealed concrete floor from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by concrete treatment manufacturer.
- B. Do not place any protective plastic sheeting, rubber matting, rugs, or furniture that will trap moisture or prevent proper drying, which can result in a cloudy effect on the floor.
- C. Limit pedestrian use until 24 hours after installation. Normal pedestrian use may occur after 7 days.

END OF SECTION

SECTION 036100 - GROUTED DOWELS IN CONCRETE

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:
 - 1. Reinforcing bar dowels and threaded installed in hardened concrete using adhesive prepackaged in cartridges.
 - 2. Reinforcing bar dowels and threaded rod installed horizontally through hardened concrete using epoxy adhesive placed by injection method.
 - 3. Reinforcing bar dowels and threaded rod installed vertically through hardened concrete with flowable epoxy adhesive.
- B. Related Sections:
 - 1. Section 050525 – Post-Installed Concrete Anchors for installation of adhesive anchors for attachment of nonstructural and structural components.

1.3 REFERENCES

- A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.
- B. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section.
- C. CBC: 2022 California Building Code.
- D. ICC-ES: ICC Evaluation Service:
 - 1. AC308 – Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements, 2022.

1.4 SUBMITTALS

- A. Submittal procedures and administrative provisions are established by Division 01 Section "Submittals".
- B. Product data for proprietary materials, including epoxy adhesives and nonshrink grout. Include manufacturer's detailed instructions for storage and handling, installation, and special inspection.
 - 1. Include current ICC-ES Evaluation Service Report for adhesives prepackaged in cartridges.

1.5 QUALITY ASSURANCE

- A. Cartridge Adhesive: Products proposed for use shall have an ICC-ES Evaluation Service Report evidencing compliance with ICC- ES acceptance criteria AC308 for use to resist tension and shear in cracked and uncracked concrete.
 - 1. Installation shall conform to manufacturer's written instructions listed in ICC ES report.
- B. Low-viscosity Epoxy Adhesive: Prior to the start of production installation, Contractor's on-site supervisor shall conduct a field training session demonstrating materials and methods to be employed in the Work.

Attendance by the following is mandatory: Installer's personnel to be qualified for performance of the work, adhesive manufacturer's representative, and Owner's Testing Agency.

1. Demonstrate installation techniques.
2. Identify quality assurance measures.
3. Present plan for protection of anchors from accidental disturbance during curing period.

PART 2 – PRODUCTS

2.1 ADHESIVE AND GROUT MATERIALS

A. Cartridge Adhesive

1. Epoxy Adhesive: Two-component, 100% solids, structural epoxy conforming to ASTM C881, Type IV; Grade 3; prepackaged in cartridges for manually or pneumatically operated caulk gun and automatically mixed at nozzle. Approved for use in cracked and uncracked concrete in accordance with ICC ES AC308, as demonstrated by a valid ICC-ES Evaluation Service Report. Subject to compliance with specified requirements, provide one of the following, or equal:

SET-3G Epoxy Adhesive, Simpson Strong-Tie Co.
Pure 110+, Dewalt
HIT-RE 500-V3 Adhesive, Hilti Inc.

2. Hybrid Adhesive: Two-component, hybrid adhesive prepackaged in cartridges for manually or pneumatically operated caulk gun and automatically mixed at nozzle. Approved for use in cracked and uncracked concrete in accordance with ICC ES AC308, as demonstrated by an active ICC Evaluation Service Report. Subject to compliance with specified requirements, provide one of the following, or equal:

AT-XP Adhesive, Simpson Strong-Tie Co.
AC200+, DeWalt/Powers
HIT-HY 200-R V3 Adhesive, Hilti Inc.

- #### **B. Low-viscosity Epoxy Adhesive: Two-component, 100 percent solids, high-strength, creep-resistant, liquid epoxy; capable of bonding to damp surfaces. ASTM C881, Type IV, Grade 1, Class C. Minimum heat deflection temperature of 125 degrees F, ASTM D648. Use epoxy adhesive materials to suit the width of annulus to be injected in accordance with manufacturer's recommendations. Subject to compliance with requirements provide one of the following, or equal:**

MasterInject 1500, Sika
MaterInject 1380, Sika

2.2 DOWELS

- #### **A. Reinforcing Bars: ASTM A615, Grade 60, or ASTM A706, deformed. Embedded end shall be free of offsets that interfere with installation.**
- #### **B. Threaded Rod: Refer to Specification Section 050525 "Post-Installed Anchors".**

PART 3 – EXECUTION

3.1 INSTALLATION

- #### **A. General: Employ drilling and hole cleaning methods that comply with OSHA Code of Federal Regulations Standard 1926.1153, Respirable Crystalline Silica, Table 1. Reference: <https://www.osha.gov/laws-regs/regulations/standardnumber/1926/1926.1153> for more information.**

1. Install anchors in conformance with manufacturer's written instructions.

3.2 EXAMINATION

- A. Examine areas to be drilled to verify conditions of access, interferences, and existing materials.
- B. Locate existing reinforcing steel, which might interfere with drilling, with a suitable metal detector, ground penetrating radar, or by chipping.

3.3 PREPARATION

- A. Protect existing exposed surfaces from grouting operations.
- B. Dowels shall be free of oil, mud, loose rust or other materials that may reduce bond.

3.4 INSTALLATION WITH CARTRIDGE ADHESIVE

- A. General:
 - 1. Install anchors in accordance with manufacturer's written instructions, including drilling, hole cleaning, dispensing of epoxy and setting of dowels.
 - 2. All hole orientations may be installed using cartridge adhesive.
- B. Drilling:
 - 1. Drilling Equipment: Use electric or pneumatic rotary type drilling hammer with medium or light impact and carbide tipped masonry bit. Where edge distances are less than 2 inches clear, use lighter impact equipment to prevent microcracking during drilling process.
 - a. Take care to minimize break-out at back of hole at through-dowels. Use light impact equipment or other methods.
- C. At horizontal and vertical through-dowels, overhead applications, and dowel embedment greater than twelve inches, use manufacturer's piston plug system to place grout in hole. Plug back of hole at through-dowels.

3.5 INSTALLATION WITH EPOXY USING INJECTION METHOD

- A. Through-dowels in horizontal and vertical holes shall be installed using epoxy grout injection method.
- B. Drilling:
 - 1. Drilling Equipment: Use electric or pneumatic rotary type drilling hammer with medium impact and carbide tipped masonry bit. Minimize breakout of concrete at back of hole by using light impact or other methods.
 - 2. Hole Diameter: Drill holes to a diameter 1/8 inch larger than the nominal diameter of the dowel.
- C. Cleaning: Clean holes in accordance with manufacturer's recommendations and in compliance with OSHA requirements.
- D. Grouting at horizontal through-dowels:
 - 1. Set dowel in proper position and temporarily secure.
 - 2. After installing through bar, install injection tube beneath bar at one end and install relief tube above bar on opposite end of drilled hole and seal ends.
 - 3. When seals are cured, inject low-viscosity epoxy under pressure through lower tube until flow is received from upper relief tube.
 - 4. Tie off injection and relief tubes to maintain positive head as necessary to prevent leakage of epoxy until epoxy has cured, then remove.

- E. Grouting at vertical through-dowels:
 - 1. Sequence installation to occur before new concrete work.
 - a. Set dowel in proper position and temporarily secure. Plug bottom of hole to permit epoxy injection without leaking out.
 - b. Fill annulus around bar with low viscosity liquid epoxy. Work dowel in a circular motion to ensure complete filling.
 - c. Remove plug from bottom of hole prior to placing new concrete below dowel.

3.6 INSTALLATION WITH NONSHRINK GROUT

- A. Through-dowels in vertical holes may be installed using non-shrink grout method.
- B. Drill holes to a diameter 1-inch minimum larger than the nominal diameter of the dowels.
- C. Drill holes using water-cooled core drilling equipment. Roughen surface by method acceptable to Owner's Representative.
- D. Clean hole by flushing with water hose inserted to back of hole until water runs clear, brush twice with round steel wire bristle brush of appropriate diameter, and flush with hose until water runs clear.
- E. Place reinforcing bar into hole. Provide centralizing devices as required to maintain bar at center of core.
- F. Mix and place grout at fluid consistency in accordance with manufacturer's recommendations. Do not add more water than recommended by manufacturer.
- G. Cure by covering with wet cloth for 3 days minimum or by coating with curing compound.

3.7 ABANDONED HOLES

- A. Fill abandoned vertical holes with nonshrink grout. Fill abandoned horizontal holes with epoxy grout.

3.8 CLEANING

- A. Clean excess epoxy from around holes before it hardens only on surfaces that will not be exposed to view.
- B. On surfaces that will be exposed to view, allow epoxy to cure then chip away hardened epoxy. Surfaces shall be repaired to match existing finish to the satisfaction of the Owner's Representative.

3.9 PROTECTION

- A. Protect dowels from accidental disturbance during setting time specified by manufacturer.
- B. Do not place pull-out or shear loads on dowels during curing time specified by manufacturer.

3.10 FIELD QUALITY CONTROL

- A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section, "Quality Requirements".
- B. Testing Laboratory will:
 - 1. Review manufacturer's recommended installation and inspection procedures, as contained in ICC Evaluation Service Report.
 - 2. Special Inspect installation for conformance with Contract Documents, manufacturer's recommendations, and requirements of the applicable ICC-ES report.

3. Test dowels in accordance with requirements of CBC Section 1910A.5 for adhesive anchors.
 - a. Testing Procedure: Use hydraulic ram testing procedure of CBC Section 1910A.5.5 for testing of bond (confined configuration).
 - b. Test Loads: As shown on Drawings, or as otherwise designated by Owner's Representative, in conformance with test load requirements CBC Section 1910A.5.4.
 - c. Testing Frequency: 100 percent, except frequency can be reduced in accordance with CBC Section 1910A.5.3.
 - d. Acceptance Criteria: Maintain test load for a minimum of 15 seconds with no discernible movement of dowel out of hole.

END OF SECTION

SECTION 050525 - POST-INSTALLED CONCRETE ANCHORS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Post-installed mechanical anchors in concrete, including:
 - a. Wedge-type expansion anchors approved for use for seismic applications in cracked and uncracked concrete.
 - b. Screw-type drilled-in anchors approved for use for seismic applications in cracked and uncracked concrete.
 - 2. Post-installed adhesive anchors in concrete, approved for use for seismic applications in cracked and uncracked concrete.
- B. Related Sections:
 - 1. Section 036100 – Grouted Dowels: For threaded rods installed in hardened concrete using non-shrink grout.

1.3 REFERENCES

- A. ICC-ES or IAPMO-ES Evaluation Report: Evaluation Report issued by the ICC or IAPMO Evaluation Service demonstrating compliance with provisions of the 2021 International Building Code.

1.4 DEFINITIONS

- A. Nominal Embedment Depth (h-nom): Minimum length from concrete surface to bottom end of anchor upon initial of anchor installation. Nominal embedment depth is noted on construction documents.
- B. Effective Embedment Depth (h-ef): Minimum length from concrete surface to bottom of 'expansion clip' where the expansion anchor engages the concrete. At screw anchors, the effective embedment depth is reduced from nominal embedment depth to provide an accurate length where threads fully engage the concrete. Effective embedment depth is used in calculations only and is not shown on the construction documents.

1.5 SUBMITTALS

- A. General: Submit the following in accordance with Division 01, "Submittal Procedures".
 - 1. Manufacturer's product data.
 - 2. Manufacturer's installation instructions.
 - 3. ICC-ES or IAPMO-ES Evaluation Reports.

1.6 QUALITY ASSURANCE

- A. Certifications: Anchors shall have an active ICC-ES or IAMPPO-ES Evaluation Report in accordance with the following ICC-ES Acceptance Criteria:
 - 1. Mechanical Anchors in Concrete: Acceptance Criteria for Mechanical Anchors in Concrete Elements (AC 193).

2. Adhesive Anchors in Concrete: Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements (AC 308).

PART 2 – PRODUCTS

2.1 MECHANICAL ANCHORS

- A. General: Anchors shall be tested and approved for use in cracked and uncracked concrete in accordance with ICCES AC 193.
 1. Anchors installed through underside of steel deck shall be tested and approved for installation through the soffit of concrete-filled metal deck assemblies in accordance with ICC-ES AC 193.
 2. Anchors used for resistance to seismic forces shall be qualified in accordance to ACI 355.2 for mechanical anchors and ACI 355.4 for adhesive anchors.
- B. Acceptable Products: Where anchor manufacturer and product are indicated on Drawings, provide designated product.
 1. Contractor shall be allowed to substitute products of other manufacturer's, subject to demonstrating equivalent tension and shear strength to specified anchor, under project installation conditions.
 2. Where anchor design is prepared by Trade Subcontractor's Engineer, use product designated by Trade Subcontractor's Engineer, subject to meeting requirements of this Section.
- C. Wedge-type Anchors: Wedge type, torque-controlled expansion anchors. Size and nominal embedment depth as indicated on Drawings.
 1. Limitations: Use materials for locations as indicated below:
 - a. For use in dry interior environments: Case hardened low carbon steel, with zinc plating in accordance with ASTM B633, SC1, Type III, or Type 304 or Type 316 stainless steel, with manufacturer's matching nut and washer.
 - b. For locations exposed to weather and at building enclosure: Type 304 or Type 316 stainless steel only, with manufacturer's matching nut and washer.
 2. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
 - a. Kwik Bolt TZ2, by Hilti, Inc.
 - b. Strong-Bolt 2, by Simpson Strong-Tie Co.
 - c. Power-Stud+ SD2, by Dewalt.
- D. Screw Anchors: Hardened steel, screw-type anchors or rod hangers approved for use in cracked and uncracked concrete. Diameter and nominal embedment depth as indicated on Drawings.
 1. Limitations: Use materials for locations as indicated below:
 - a. For use in dry interior environments: Case hardened low carbon steel, with zinc plating in accordance with ASTM B633, SC1, Type III, or mechanically galvanized in accordance with ASTM B695, Class 5, Type 1 or Type 304 or Type 316 stainless steel.
 - b. For use at pressure preservative treated lumber: ASTM B695, Class 65, Type I.
 - c. For locations exposed to weather and at building enclosure: Type 304 or Type 316 stainless steel only.
 2. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
 - a. Kwik HUS EZ screw anchor and KH-EZ1 rod hanger, by Hilti.
 - b. Titen HD Screw Anchor and Titen HD Rod Hanger, by Simpson Strong-Tie Co. Inc.
 - c. ScrewBolt+, Hangermate+ Rod Hanger, and Snake+ screw anchor by Dewalt.

2.2 ADHESIVE ANCHORS

- A. Adhesive Anchors: Adhesive anchors include adhesive with proprietary inserts complete with nuts and washers intended for use with specified adhesive, or adhesive with non-proprietary threaded rod with matching size nut and washer.
- B. General: Anchors shall be tested and approved for use to resist seismic forces (IBC Seismic Design Categories A to F) in cracked and uncracked concrete in accordance with ICCES AC 308.
- C. Epoxy Adhesive: Two-component, 100% solids, structural epoxy conforming to ASTM C881, Type IV; Grade 3; prepackaged in cartridges for manually or pneumatically operated caulk gun and automatically mixed at nozzle. Approved for use in cracked and uncracked concrete in accordance with ICC or IAPMO Evaluation Service Report.
1. Where anchor manufacturer and product are indicated on Drawings, provide designated product.
 2. Contractor shall be allowed to substitute products of other manufacturer's, subject to demonstrating equivalent tension and shear strength to specified anchor, under project installation conditions.
 3. Where anchor design is prepared by Trade Subcontractor's Engineer, use product designated by Trade Subcontractor's Engineer, subject to meeting requirements of this Section.
 4. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
 - a. HIT -RE500 V3 Epoxy Adhesive Anchoring System, by Hilti, Inc.
 - b. SET-3G Epoxy Adhesive, by Simpson Strong-Tie Co.
 - c. Pure 110+, by Dewalt.
- D. Acrylic Adhesive: Hybrid Adhesive: Two-component, hybrid adhesive prepackaged in cartridges for manually or pneumatically operated caulk gun and automatically mixed at nozzle. Approved for use in cracked and uncracked concrete in accordance with ICC ES AC308 or ACI 355.4, as demonstrated by an active ICC or IAPMO Evaluation Service Report.
1. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
 - a. HIT -HY 200 Adhesive, Hilti Inc.
 - b. AT-3G Adhesive, Simpson Strong-Tie Co.
 - c. AC100+ Gold, Dewalt.
- E. Threaded Rod:
1. Material: Unless otherwise indicated on the Drawings, furnish carbon steel threaded rods conforming to ASTM 1554 Grade 36 or ASTM A193 Type B7. As indicated on the Drawings, provide Type 304 or Type 316 stainless steel anchors with manufacturers matching nut and washer.
 2. Finish: Furnish carbon steel rods with zinc plating in accordance with ASTM B633, SC1, Type III at dry interior locations. Furnish carbon steel rods with hot-dipped galvanized coating complying with ASTM A153 at exterior and damp interior locations, at pressure preservative treated wood, or where indicated on plans.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. General: Employ drilling and hole cleaning methods that comply with OSHA Code of Federal Regulations Standard 1926.1153, Respirable Crystalline Silica, Table 1. Reference: <https://www.osha.gov/laws-regs/regulations/standardnumber/1926/1926.1153> for more information.
1. Install anchors in conformance with manufacturer's written instructions.

B. Examination:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Notify Owner's Representative for clarification where reinforcing steel or other embedded items require relocation of anchors or cutting of reinforcement.
2. Notify Owner's Representative for clarification where anchors appear to be located too close to edge of concrete, in particular where edge is not shown on Drawing detail.
3. Notify Owner's Representative for clarification where concrete thickness is inadequate to achieve specified anchor embedment. Minimum concrete thickness shall be as indicated in ICC or IAPMO report for full anchor capacity. Where none included in report, or where minimum cover less than above, cover shall not be less than minimum thickness for reduced capacity. Allow for specified embedment, plus one anchor diameter allowance for overdrilling, plus 3/4 inch minimum cover from end of hole to concrete surface in all cases when determining minimum thickness for reduced capacity.

C. Drilling:

1. Do not drill holes in concrete mix has achieved full design strength.
2. Drill holes with rotary impact hammer drills using carbide-tipped bits with diameter as recommended by anchor manufacturer. Reduce impact as hole approaches concrete surface as necessary to prevent cracking and spalling. Use core bits only with approval of Owner's Representative. Roughen concrete surface at adhesive anchors.
3. Holes shall be drilled perpendicular to the concrete surface, unless otherwise shown on Drawings. Anchors shall be drilled to within 5 percent of specified alignment.
4. Exercise care in drilling to avoid damaging existing reinforcing, conduits and other embedded items.

D. Wedge-type Anchors:

1. Drill holes designated nominal embedment depth plus one anchor diameter minimum. End of hole shall be 3/4 inch minimum clear from concrete surface.
2. Remove dust and debris with pressurized air, in accordance with manufacturer's instructions.
3. Set anchors to designated nominal embedment depth, plus an allowance for withdrawal during torque tightening.
4. Tighten using a torque wrench to manufacturer's recommended installation torque. Following attainment of 10% of recommended torque, achieve 100% of designated torque within 5 or fewer turns of the nut. If torque is not achieved, the anchor shall be abandoned or removed if possible, and replaced unless otherwise directed by the Owner's Representative.

E. Screw Anchors:

1. Take particular care to achieve proper hole diameter. Use only sharp bits with diameter recommended by manufacturer. Use drilling equipment and methods to prevent enlargement of holes by drill bit wobble.
2. Remove dust and debris with pressurized air, in accordance with manufacturer's instructions.
3. Install the anchor in accordance with manufacturer's instructions with an impact wrench. Take care not to overtighten anchor; note that it is not necessary to reach the manufacturer's maximum installation torque for correct installation.

F. Adhesive Anchors:

1. Drill holes to diameter recommended by manufacturer with rotary impact hammer drills using carbide-tipped bits; core bits shall not be permitted.
2. Thoroughly clean holes in accordance with manufacturer's instructions and in compliance with OSHA requirements. Clean immediately prior to anchor installation under observation of Special Inspector.
3. Inject adhesive into holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive. Follow manufacturer recommendations to ensure proper mixing of adhesive components. Sufficient adhesive shall be injected in the hole to ensure that the annular gap is filled to the surface. Remove excess adhesive from the surface. Shim anchors with suitable device to center the anchor in the hole.

4. Do not disturb or load anchors before manufacturer specified cure time has elapsed.

3.2 REPAIR OF DEFECTIVE WORK

- A. Remove and replace misplaced or malfunctioning anchors. Fill empty anchor holes and patch failed anchor locations with high-strength non-shrink, nonmetallic grout. Anchors that fail to meet proof load or installation torque requirements shall be regarded as malfunctioning.

3.3 FIELD QUALITY CONTROL

- A. Testing Laboratory will:
 1. Review manufacturer's recommended installation and inspection procedures, as contained in Evaluation Service Report.
 2. Review Special Inspection Form.
 3. Special Inspect installation for conformance with Contract Documents, manufacturer's recommendations, and requirements of the applicable ES report. Verify that anchors are being installed by trained installers.
 - a. Periodically inspect installation of mechanical anchors.
 - b. Periodically or continuously inspect installation of adhesive anchors during hole cleaning and anchor installation as indicated on Special Inspection Form.
 4. Test anchors in accordance with requirements of CBC Section 1910A.5, including testing frequency and method for adhesive anchors.
 - a. Test Loads: As shown on Drawings, or as otherwise designated by Owner's Representative, in conformance with test load requirements CBC Section 1910A.5.4.
 - b. Testing Frequency, Structural Applications: 100 percent, except frequency can be reduced in accordance with CBC Section 1910A.5.3.
 - c. Testing Frequency, Equipment and Component Anchorage: 50 percent or alternate bolts in a group, including at least one-half of the anchors in each group shall be tested.

END OF SECTION

SECTION 051200 - STRUCTURAL STEEL FRAMING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:
 - 1. Structural steel.
- B. Related Sections include the following:
 - 1. Section 031000 – Formwork, for installation of anchor rods (bolts) and other steel parts that are embedded in concrete to receive structural steel.
 - 2. Section 033000 – Cast in Place Concrete for grouting of baseplates and bearing plates.
 - 3. Section 053000 – Steel Decking for provision of shear connector studs that are field installed to tops of beams.

1.3 REFERENCES

- A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.
- B. American Institute of Steel Construction's
 - 1. AISC 303: Code of Standard Practice for Steel Buildings and Bridges, 2016.
 - a. The General Conditions, Special Conditions and Division 1 shall govern in the case of conflicts with provisions of the AISC 303.

- G. CGBC – 2022 California Green Building Code

- H. Evaluation Report: Where designated in this Section, products shall have an active Evaluation Report evidencing compliance with provisions of the 2015 International Building Code. Reports by ICC Evaluation Service, Inc. or IAPMO shall be acceptable.
- I. Research Council on Structural Connections'
 - 1. RCSC Specification: Specification for Structural Joints Using High Strength Bolts, 2014.
- J. SSPC: Latest edition of Society for Protective Coatings surface preparation and painting specifications apply where cited in this Section.

1.4 DEFINITIONS

- A. Structural Steel: As classified by Section 2 of AISC 303.
- B. Protected Zone: Area of member, designated in Contract Documents, where limitations apply to the making of attachments by the fabricator, erector and other trades.
- C. Seismic Load Resisting System (SLRS): Members and connections designed to resist seismic forces, as designated on the drawings.
- D. Awarding Authority: The state authority under which a California state project is awarded. The University of California shall serve as the awarding authority for non-California state projects
- E. Product Category Rule: The set of rules, requirements, and guidelines accepted by the awarding authority used to develop on EPD for a product group.
- F. Environmental Product Declaration (EPD): Independently verified document that reports a product's global warming potential and that:
 - 1. Is developed according to the guidelines of the applicable Product Category Rule acceptable to the California State awarding authority. Reference [Buy Clean California Act](#).
 - 2. Is independently verified in accordance with ISO 14025:2006 Environmental labels and declarations - Type III environmental declarations – Principles and procedures
- G. Manufacturer: An entity that produces the basic construction material that typically requires additional processing by a fabricator before use in a project.
 - 1. A steel mill that produces steel is a manufacturer.
 - 2. A facility that bends, welds, cuts, or otherwise shapes steel to be erected or otherwise installed in a location is a fabricator.
- H. Global Warming Potential (GWP): A measure of carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, and perfluorocarbons produced when manufacturing a product represented by an equivalent amount of CO₂, expressed as CO₂ eq.
- I. Product Category Rule (PCR): The set of rules, requirements and guidelines used to develop an EPD for a product group.

1.5 SUBMITTALS

- A. Submittal procedures and administrative provisions are established by Division 01 Section "Submittal Procedures".
 - 1. Requirements of "Submittal Procedures" supersede provisions of Section 4.4 of AISC 303 Code, indicating time for review of shop drawings.
- B. Shop Drawings: Show complete information necessary for the fabrication and erection of structural-steel components in accordance with ANSI/AISC 360.

1. Identify surface preparation and finish.
- C. Mill Test Reports: Submit test reports certifying compliance with specified standards to Testing Laboratory for record purposes.
 1. Steel.
 2. Bolts, nuts and washers.
 3. Welding filler materials, fluxes and shielding gases.
 4. Shear connector studs.
- D. Product Data: For each type of product indicated, including but not limited to weld filler materials, shop primers, bar couplers and deformed bar anchors.
- E. Welder Performance Qualification Records (WPQR's). Submit to Testing Laboratory for record purpose.
- F. Welding Procedure Specification (WPS) for each different welded joint proposed for use, whether prequalified or qualified by testing.
 1. Prepare in accordance with AWS D1.1 requirements.
 2. Include procedure qualification record (PQR) for procedures qualified by testing.
 3. For Demand Critical welds, conform to additional requirements of AWS D1.8.
 4. Allow sufficient time for review by Testing Laboratory in addition to review by Owner's Representative.
- G. High strength bolt installation procedure.
- H. Environmental Product Declarations (EPDs) for all steel.
 1. Provide manufacturer's single-facility EPD or company-wide EPD that reports for each facility location supplying material.
 - a. EPD must be valid at the time of material installation.
 - b. The following EPDs are not acceptable:
 - 1) Industrywide and/or industry-average product declarations.
 - 2) Fabricator's product declarations.
 - 3) Companywide declarations that do not report the GWP of its manufacturing facilities separately.
 2. Include at a minimum:
 - a. Product description
 - b. Product category rule under which the EPD was developed.
 - c. Body verifying that the EPD was developed according to ISO 14025 for the applicable PCR.
 - d. Expiration date
 - e. Manufacturer and manufacturer's location
 - f. Global warming potential measured in CO₂ eq.
 3. EPD must be valid at the time of material installation
- I. Samples: As requested by the Testing Laboratory.

1.6 QUALITY ASSURANCE

- A. Comply with applicable provisions of AISC 303, ANSI/AISC 341, ANSI/AISC 360, except where more stringent requirements are shown or specified.
- B. Fabricator Qualifications: Qualify by either of the following:
 1. A qualified fabricator who participates in the AISC Certification Program and is designated an AISC Certified Plant, Category " BU" at time of bid.
 2. A fabricator having a minimum of five years' experience in structural steel framed building projects of similar size and designed for similar seismic demands. Similar size shall be project having no

less than 90% square footage of this project. Similar seismic demands shall be projects designed for a short period pseudo acceleration, S_{DS} , of x.xx g or greater.

- C. Qualifications for Welding Work: Qualify welding procedures and welding operators in accordance with AWS D1.1.
 - 1. Welders performing Demand Critical welds made through a beam web access hole or gusset plate access hole shall have Supplemental Welder Qualification for Restricted Welding in accordance with AWS D1.8.

1.7 COORDINATION

- A. Provide metal templates and setting drawings for installation of anchorage items embedded in other work.
- B. Furnish embedded anchorage items to avoid delays to other Work.
- C. Survey embedded items for proper location prior to delivery of steel.

PART 2 – PRODUCTS

2.1 STEEL MATERIALS

- A. General: All steel shall be identified as required by CBC Section 2202.1. Steel that is not properly identified shall be tested to show conformance with requirements of applicable ASTM Standard at Contractor's expense.
- B. Hot rolled structural steel sections, hollow structural steel sections, and steel plate shall meet the GWP limits included in Table 1 of the Buy Clean California Act Environmental Product Declaration (EPD) Compliance Guide, and of CGBC Table 5.409.3.
- C. W-Shapes: ASTM A992.
 - 1. Supply Charpy V-Notch impact testing for members of the Seismic Load Resisting System with flanges 1-1/2 inches thick or thicker. Steel shall evidence a minimum average value of 20 ft-lbs at +70 deg F when tested in accordance with ASTM A6, Supplementary Requirement S30.
 - 2. Furnish shapes conforming to ASTM A913, Grade 65 where designated on drawings.
- D. Channels and Angles: ASTM A36; except ASTM A572, Grade 50 may be substituted at Fabricator's option to suit material availability.
 - 1. Furnish ASTM A572, Grade 50 material where designated on drawings.
- E. Plates and Bars: Furnish Grade 50 material, unless otherwise designated.
 - 1. Grade 50: ASTM A572, Grade 50; ASTM A588, Grade 50; or ASTM A529, Grade 50 or Grade 55.
 - 2. Grade 36: ASTM A36.
 - a. Where designates on drawings.
 - 3. Grade 42: ASTM A572, Grade 42, or ASTM A588 for baseplates thicker than 4 inches.
 - 4. Supply Charpy V-Notch impact testing, in accordance with ASTM A6, Supplementary Requirement S5, for plates 2 inches thick or thicker used in the Seismic Load Resisting System. Steel shall minimum average value of 20 ft-lbs at +70 deg F when tested in accordance with ASTM A673, Frequency P. Requirement applies to the following:
 - a. Plates for built-up members used in the SLRS.
 - b. Baseplates for SLRS columns.
 - c. SLRS connection plates, including continuity plates and gusset plates.
- F. Pipes: ASTM A53, Type E, Grade B.

- G. Hollow Structural Steel:
1. Square and rectangular HSS: ASTM A500 Grade C.
 2. Round HSS: ASTM A500, Grade B or Grade C.

2.2 BOLTS, ANCHORS AND CONNECTORS

- A. High Strength Bolts: One of the following, unless otherwise designated on Drawings.
1. ASTM F3125, Grade 325, Type 1, heavy hex structural bolts with ASTM A563, Grade C or DH heavy hex nuts and ASTM F436 hardened washers.
 2. ASTM F3125, Grade F1852, Type 1, round head tension control bolts with ASTM A563, Grade C or Grade DH heavy hex nuts and ASTM F436 hardened washers.
- B. A 490 Bolts: Provide where designated on Drawings.
1. ASTM F3125, Grade A490, Type 1, heavy hex structural bolts with ASTM A563, Grade DH heavy hex nuts; ASTM F436 hardened washers, and ASTM F959, Type 490 direct-tension indicator washers.
 2. ASTM F3125, Grade F2280, Type 1, round head tension control bolts with ASTM A563, Grade DH heavy hex nuts and ASTM F436 hardened washers.
- C. ASTM A307 Bolts: ASTM A307, Grade A, hex headed bolts furnished with ASTM A563, Grade A, hex nuts.
- D. Anchor Rod Assembly:
1. Anchor rod: ASTM F1554, Grade 36; end threaded.
 2. Head: Form head with ASTM A563, Grade A, heavy hex nut. Lock against loosening with suitable jam nut.
 3. Nuts: ASTM A563, Grade A, heavy hex.
 4. Washer: Provide steel plate washer of sufficient size to completely cover hole in baseplate; minimum thickness shall be 1/3 of bolt diameter.
- E. High Strength Anchor Rod Assembly:
1. Anchor rod: ASTM F1554, Grade 105, with Supplementary Requirement S4, "Grades 55 and 105 Charpy Impact Requirements of 15 foot-pounds at +40 deg F." Mark exposed end in accordance with Supplementary Requirement S3, "Permanent Grade Identification".
 2. Head: Form head with round steel plate washer sandwiched between ASTM A563, Grade DH, heavy hex nuts. Plate washer size shall be 3 times bolt diameter and thickness shall be 1/2 of the bolt diameter, unless otherwise designated.
 3. Nuts: ASTM A563, Grade Dh, heavy hex, or ASTM A194, Grade 2H, heavy hex.
 4. Washer: Provide steel plate washer of sufficient size to completely cover hole in baseplate; minimum thickness shall be 1/3 of bolt diameter.
- F. Reinforcing Bar Couplers: Weldable half couplers for joining reinforcing bars to structural steel. Acceptable products shall have an active Evaluation Report evidencing code compliance for full mechanical tension splice. Acceptable Products: Lenton Weldable Coupler C3J/C2 by Erico, or approved equal.
- G. Deformed Bar Anchors: Fabricated from deformed wire conforming to ASTM A1064, 70 ksi minimum yield strength. Acceptable Products: Deformed Bar Anchor Studs by Nelson Stud Manufacturing, or approved equal.
1. Substitution of ASTM A706 bars of equal size will be permitted, subject to approval of welding procedure by Owner's Representative.
- H. Threaded Rods: ASTM A36 end threaded round bar. Nuts shall conform to ASTM A563, Grade A, hex.
1. Accessories, including clevises and turnbuckles, shall conform to ASTM A108, Grade 1035, cold-finished carbon steel; and capable of developing specified tensile strength of rod.

2.3 WELDING CONSUMABLES

- A. General: Filler materials and fluxes shall conform to requirements of AWS D1.1; of suitable type for base metals being welded and the intended application.
 - 1. Electrodes for SMAW shall be low hydrogen.
- B. Filler and weld metal used for welds of Seismic Lateral Resisting System (SLRS) members and connections shall conform to additional requirements of AWS D1.8, Section 6.1.
- C. Filler and weld metal used for complete-joint-penetration Demand Critical welds shall conform to additional requirements of AWS D1.8, Sections 6.2, 6.3, and 6.4.

2.4 OTHER ITEMS

- A. Primer Paints:
 - 1. Primer paints listed below shall only be used where VOC limits of locale where primer is applied to steel are not exceeded. Contractor shall apply listed primer paints in such locales.
 - 2. Type A Primer: Fast-drying, rust-inhibitive, chromate- and lead-free modified alkyd primer. Acceptable Products: Series V10 by Tnemec, 42 Series by Maclac, or approved equal
 - 3. Type B Primer: SSPC-Paint 20, Type II. Organic, zinc-rich primer; containing less than 0.002% lead. Acceptable Products: Series 90-97 Tneme-Zinc by Tnemec, Carbozinc 621 by Carboline, or approved equal.
- B. Galvanizing Repair Paint: ASTM A780.

2.5 FABRICATION

- A. Fabricate structural steel in accordance with AISC 303 and ANSI/AISC 360.
 - 1. Conform to additional requirements of ANSI/AISC 341 for members and connections of the Seismic Load Resisting System.
 - 2. Conform to additional requirements of Section 05 12 10 - Architecturally Exposed Structural Steel for AESS members and connections.
- B. Thermal Cutting:
 - 1. Make cuts by machine or using mechanical guide.
 - 2. Processes shall be limited to Plasma Arc or Oxyfuel Gas processes, except as approved by Owner's Representative.
 - 3. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1.
- C. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.
- D. High Strength Bolted Connections: Install bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A 490 Bolts" for type of bolt and joint specified.
 - 1. Bolt installation: Pretensioned, except where otherwise designated on Drawings.
 - 2. Faying surfaces: Class A surfaces, in accordance with requirements for slip-critical connections.
 - 3. Hole type: Standard, except where designated on Drawings.
 - a. Do not punch holes in material greater than 1/2 inch in thickness, unless approved in writing by Owner's Representative.
- E. Welding:
 - 1. Weld in accordance with ANSI/AISC 360 and AWS D1.1 using manual shielded arc method (SMAW), flux cored arc method (FCAW), or gas shielded arc method (GMAW).
 - 2. Weld in accordance with welding procedure specifications (WPS's) for joint, which are to be available to welders and inspectors during the production process.

3. Groove welds shall be complete joint penetration welds, unless designated otherwise on drawings. Groove preparation is at Contractor's option, subject to qualification in accordance with AWS D1.1.
 - a. Use double bevel groove welds for sections thicker than 1-1/2 inches, wherever practical.
 4. Partial penetration welds shall have an effective throat thickness as designated on drawings. Groove preparation is at Contractor's option, subject to qualification in accordance with AWS D1.1.
 5. End dams shall not be used, except at the outboard end of weld tabs that are removed. Provide beveled transitions at changes in groove profile.
 6. For members and connections of the Seismic Load Resisting System (SLRS), conform to supplemental requirements of AWS D1.8 and the following:
 - a. Use filler materials specified for SLRS welds.
 - b. Weld access holes for complete penetration beam flange to column connections shall be shaped in accordance with AWS D1.8, Paragraph 6.11.1.2, "Alternate Geometry"; and conform to quality requirements of Paragraph 611.2.
 7. Demand Critical welds: Conform to requirements for welding of members and connections of the SLRS, the supplemental requirements of AWS D1.8 applicable to Demand Critical welds, and the following:
 - a. Use filler materials specified for Demand Critical welds.
 - b. Complete penetration welds made through access holes in member webs or gusset plates shall follow the welding sequence of AWS D1.8, Paragraph 6.14.
 - c. Remove backing bars where designated on drawings.
 - d. Provide a reinforcing fillet at locations where backing bars are removed.
 - e. Butt joints of parts of unequal thickness or width, shall have a smooth transition between offset surfaces in accordance with provisions of AWS D1.1 for tension joints.
 8. Weld reinforcing steel bar couplers to structural steel in accordance with AWS D1.1 using qualified procedures and in accordance with manufacturer's recommendations.
- F. Studs: Automatically end weld headed studs and deformed bar anchors in accordance with AWS D1.1 and manufacturer's recommendations in such a manner as to provide complete fusion between the end of the stud and steel member.

2.6 FINISHES

- A. General:
1. Cleaning: All steel shall be free of oil and grease. Clean as required in accordance with SSPC SP1 "Solvent Cleaning".
 2. Preparation: All steel shall be free of loose mill scale and foreign matter. Clean as required by SSPC SP 2 "Hand Tool Cleaning".
- B. Unpainted: Structural steel at the building interior that is concealed by finishes or fireproofed in the completed construction may remain unpainted.
1. Steel may be prime painted at Contractor's option, except for the following:
 - a. Members to receive spray fireproofing.
 - b. Top surfaces of beams to receive welded shear connector studs or weld-attached steel deck.
 - c. Surfaces in contact with concrete, except initial two inches.
 - d. Faying surfaces of high strength bolted connections.
 - e. Surfaces within 1 inch of field weld locations.
- C. Interior Prime Painted: Prime paint interior surfaces that will remain visible in the completed construction, including steel at penthouses.
1. Do not paint faying surfaces of high strength bolted connections and within 1 inch of field weld locations.

- D. Exterior Prime Painted: Prime paint surfaces that are outside the weatherproof envelope, including concealed surfaces.
 - 1. Surface preparation: SSPC SP6 "Commercial Blast Cleaning". Ease corners of plates and shapes to 1/16-inch minimum chamfer.
 - 2. Primer: Type B, at 3 mils dry film thickness. Verify that primer is compatible with finish painting systems.
 - 3. Do not paint within 1 inch of field weld locations; paint faying surfaces of bolted connections.
 - 4. Schedule application of intermediate coats prior to erection, where steel cannot be properly field coated after erection.

- E. Hot-Dip Galvanizing: Hot dip galvanize items designated on drawings.
 - 1. Galvanize items in accordance with ASTM A123.
 - 2. Provide hot dip galvanized fasteners for connection of galvanized items, except do not galvanize A490 bolts. Galvanize in accordance with ASTM A153, Grade 50.
 - 3. Obtain approval for locations of vent holes in closed sections.

2.7 SOURCE QUALITY CONTROL

- A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section, "Quality Requirements".

- B. Special Inspection and testing shall be made in accordance with CBC Section 1705.2, AISC 360, and AISC 341.

- C. Testing Laboratory will:
 - 1. Collect and review material test reports and certificates in accordance with AISC 360 chapter N3.2 including but not necessarily limited to:
 - a. Material test reports for structural steel elements, steel castings and forgings, anchor rods and threaded rods verifying compliance with specified requirements.
 - b. Certificates for fasteners, welding consumables, and headed studs, verifying compliance with specified requirements.
 - c. Review welding procedure specifications for compliance with applicable requirements of AWS D1.1 and AWS D1.8.
 - 1) Verify that machine settings and travel speed correspond to electrode manufacturer's recommendations.
 - d. Review procedure qualification records for weld procedure specifications that are not prequalified in accordance with AWS D1.1.
 - e. Collect and review qualifications of welders.
 - f. Review material identification and control procedures for conformance with requirements of the CBC Section 2203.1, AISC 360.N2, and AISC 303.6.1
 - 2. Inspect high-strength bolting in accordance with requirements of AISC 360 Chapter N5.6 "Inspection of High Strength Bolting".
 - a. Perform additional QA inspection tasks and documents listed in ANSI/AISC 341, Section J7, "Inspection of Bolting" for Seismic Force Resisting System member connections.
 - 3. Inspect shop and field welding in accordance with requirements of AISC 360 Chapter N.5.4 "Inspection of Welding".
 - a. Perform additional QA inspection tasks listed in ANSI/AISC 341, Section J6.1, "Visual Welding Inspection" for Seismic Force Resisting System member connections.
 - 4. Ultrasonic test 100 percent of complete joint penetration welds in materials 5/16-inch or greater. Perform testing in accordance with procedures and acceptance criteria of AWS D1.8, Section 7.10, "Ultrasonic Testing".
 - a. Apply requirements for seismic connections to all connections.

- b. Subject to approval of authority having jurisdiction, the amount of testing will be permitted to be reduced in accordance with provisions of ANSI/AISC 341, Section J, paragraph J6.2g, "Reduction of Percentage of Ultrasonic Testing".
- 5. For members and connections of the Seismic Force Resisting System, perform additional nondestructive testing (NDT) of welds and base metal adjacent to welds in accordance with provisions of ANSI/AISC 341, Section J, paragraph J6.2. Perform tests in accordance with applicable requirements of AWS D1.8, Section 7, "Inspection".
 - a. MT inspection of k-area base metal in web, where welding of continuity plates, doubler plates or stiffener plates occurs in k area.
 - b. MT inspection of beam-to-column CJP's.
 - c. UT testing of base metal, including baseplates, thicker than 1-1/2 inches for laminations where connected material is greater than 3/4 inches.
 - d. MT testing of beam copes and access holes at welded connections where flanges are thicker than 1-1/2 inches.
- 6. Inspect RBS flange cuts for conformance with specified requirements for contour and finish.
- 7. Periodically, inspect and test stud welding as required by CBC, in accordance with AWS D1.1. Sections 7.7 and 7.8. Review pre-production testing and qualification, periodically inspect welding, and perform verification inspection and testing.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Examine construction to support steel erection and verify the following:
 - 1. Location and elevation of bearings and anchor bolts are correct.
 - 2. Other conditions adversely affecting erection of steel are absent.
- B. Do not begin erection before unsatisfactory conditions have been corrected.

3.2 ERECTION

- A. Erect structural steel in accordance with AISC 303 and ANSI/AISC 360.
 - 1. Conform to additional requirements of ANSI/AISC 341 for members and connections of the Seismic Load Resisting System.
 - 2. Conform to additional requirements of Section 051210 - Architecturally Exposed Structural Steel for AESS members and connections.
- B. Where erection requires performing work of fabrication on site, conform to applicable requirements of "Fabrication".
 - 1. Thermally cut edges shall be made with mechanical guides and meet requirements of AWS D1.1, Section 5.14 for acceptable roughness, notches and gouges.
- C. Field corrections will not be permitted without the prior approval of the Owner's Representative.
- D. Field Touch-up Painting:
 - 1. Touch-up paint field welded connections and abrasions using same paint used for shop priming.
 - 2. Prior to painting welds, thoroughly chip and wire brush. Wash with dilute solution of phosphoric acid (approximately 5%) and rinse with water. Allow surface to dry prior to painting.
 - 3. Touch up galvanized surfaces in accordance with ASTM A780.

3.3 CLEANING

- A. After erection, thoroughly clean surfaces of foreign or deleterious matter such as dirt, mud, oil, or grease that would impair bonding of fire-retardant coating, paint or concrete.

3.4 PROTECTION

- A. Maintain warning signage for Protected Zones during construction period.
 - 1. Install temporary signage prior to erection.
 - 2. Install permanent signage as soon as practical following the masking of temporary signage by spray fireproofing or finish painting.

3.5 FIELD QUALITY CONTROL

- A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section, "Quality Requirements".
- B. Testing Laboratory will:
 - 1. Inspect and test field high strength bolting and welding in accordance with "Source Quality Control".
 - 2. Inspect Protected Zones for:
 - a. Discontinuities created by fabrication or erection operation, such as tack welds and erection aids.
 - b. Welded shear stud and decking attachments, except deck spot welds shall be permitted.
 - c. Welded, bolted, screwed, or shot in attachments for attachment of edge angles and the Work of other trades.
 - d. Placement of suitable warning signage.

END OF SECTION

SECTION 053100 - STEEL DECKING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:
 - 1. Composite steel floor deck.
 - 2. Steel roof deck.
 - 3. Deck accessories.
 - 4. Reinforcement for small openings.
 - 5. Shear connector studs for composite beam construction.

1.3 REFERENCES

- A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.
- B. American Iron and Steel Institute's
 - 1. AISI-NAS – Specification for the Design of Cold-Formed Steel Structural Members, 2020 Edition.
- C. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section. Use applicable year of adoption or revision as published in the AISI-NAS.
- D. American Welding Society's
 - 1. AWS D1.1: Structural Welding Code, 2015.
 - 2. AWS D1.3: Structural Welding Code - Sheet Steel, 2008.
- E. CBC: 2022 California Building Code.
- F. ESR: Where designated in this Section, products shall have an active Evaluation Service Report evidencing compliance with provisions of the 2021 International Building Code. Reports by ICC and IAPMO shall be considered acceptable.
- G. Steel Deck Institute's
 - 1. ANSI/SDI C-2017: Standard for Composite Steel Floor Deck-Slabs, 2017.
 - 2. ANSI/SDI RD-2017: Standard for Steel Roof Deck-Slabs, 2017.
 - 3. ANSI/SDI QA/QC-2017: Standard for Quality Control and Quality Assurance for Installation of Steel Deck.
- H. Underwriters Laboratories (UL) "Fire Resistance Directory".

1.4 DEFINITIONS

- A. Floor Deck: W series deck to receive concrete fill. May be used for roof construction.

1.5 SUBMITTALS

- A. Submittal procedures and administrative provisions are established by Division 01 Section "Submittals".

- B. Product data, including manufacturer's certification to show compliance with these specifications.
 - 1. Steel deck.
 - 2. Shear connector studs and deformed bar anchors.
 - 3. Welding electrodes.
 - 4. Mechanical fasteners.
- C. Welding procedure specifications.
- D. Welder Qualifications: Submit to Testing Laboratory for record purposes.
- E. Shop Drawings: Show deck layout, framing and supports; type, location and large scale details of attachments and seam connections; sections and details at openings, edges and accessories; size and location of shear connector studs. Show location of die-set ends to accept end laps at roof deck.

1.6 QUALITY ASSURANCE

- A. Welding Qualifications: Welding procedures and welders shall be qualified in accordance with AWS D1.3.
- B. Provide deck units that have been evaluated by an Evaluation Service acceptable to the Owner's Representative and are listed in an active ESR report.
- C. Where deck is designated as part of a fire-resistive assembly, deck shall have been tested for fire resistance per ASTM E119 as a part of an assembly of the type used for the project and shall be listed in the UL "Fire Resistance Directory".

1.7 DELIVERY, STORAGE AND HANDLING

- A. Handle and store decking in manner to prevent bending of deck units.
- B. Store off ground with one end elevated for drainage, and cover with waterproof material, ventilated to avoid condensation.

PART 2 – PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Verco Decking, Inc.
- B. ASC Steel Deck.
- C. Other Manufacturers with an active Evaluation Service Report evidencing compliance with requirements of the Drawings and these specifications.

2.2 MATERIALS

- A. Sheet Steel: Sheet steel shall conform to ASTM A653 Structural Quality, G60 zinc coated, unless otherwise indicated.
 - 1. Sheet steel, 10 gage and thicker: ASTM A1008, Designation SS grade 33.
 - 2. Refer to Division 9 for primer at sheet steel to receive finish paint.
- B. Welding Materials: AWS D1.3.
- C. Shear Connector Studs: AWS D1.1, Type B headed studs with ferrule for through-deck application; 3/4 inch diameter unless otherwise noted, as welded length as noted on Drawings.

- D. Steel Angles and (bent) Plates: ASTM A36; uncoated finish, unless otherwise noted.
- E. Deformed Bar Anchors: Fabricated from deformed wire conforming to ASTM A496, 70 ksi minimum yield strength. Provide special ferrules, as recommended by manufacturer, for welding positions other than downhand. Acceptable Products: Deformed Bar Anchor Studs by Nelson Stud Manufacturing, Deformed Bar Anchors by Tru-weld.
- F. Galvanizing Repair Paint: SSPC Paint 20 with dry film containing a minimum of 94 percent zinc dust by weight.

2.3 DECK TYPES

- A. General Requirements:
 - 1. Refer to Drawings for required deck profiles, steel sheet thickness, minimum section properties, and minimum allowable load capacity.
 - 2. Section design properties shall be determined in accordance with applicable requirements of AISI-NAS.
- B. Floor Deck: Composite steel deck having deformations to provide a mechanical bond with the concrete.
 - 1. Design in accordance with SDI C-2011. Composite deck shall be capable of providing allowable superimposed load rating specified on Drawings.
 - 2. Provide manufacturer's standard vent tabs, providing one percent open area, at floors. Composite deck used for roof construction need not be vented.
- C. Roof Deck:
 - 1. Design in accordance with SDI RD-2010.
 - 2. Steel deck shall be capable of providing allowable diaphragm shear capacity specified on Drawings.

2.4 DECK ACCESSORIES

- A. General: Provide manufacturer's standard type accessories of same material as deck, except as otherwise designated.
- B. Adjusting Plates: Provide as required at beams running parallel to deck flutes.
 - 1. Provide minimum 16 gage filler with edge lip that provides for standard side-lap attachment.
 - 2. Provide minimum 14 gage filler without edge lip where deck attaches to filler with arc seam, flare groove, or fillet weld.
- C. Pour Stops: Provide bent sheet steel pour stops at all edges of sufficient strength and stiffness to support wet concrete. Where sheet thickness is not designated on Drawings, conform to recommendations of SDI C-2011, Attachment 1.
 - 1. Provide minimum 10 gage pour stops at building perimeter.
 - 2. Provide minimum 16 gage pour stops at framed openings at building interior.
- D. Cell Closures: Provide tight fitting 18 gage closures at open ends of ribs, including at changes of floor deck units. Maintain minimum 4 inches clear between closures at down flutes.
- E. Column Closures: Provide tight filling sheet steel closures at columns.
- F. Collars: Where deck is cut prior to placement of concrete fill for passage of pipes, ducts, etc. provide minimum 18 gage sheet steel collar to cover edges of deck and form opening.

G. Roof Deck Accessories:

1. Provide minimum 16 gage by 3 inch wide cover plate, at butted end joints of deck, including but not limited to ridge and valley conditions. Furnish in minimum 8 foot lengths.
2. Provide manufacturer's standard diaphragm shear transfer devices where designated on drawings.
3. Provide closures, ridge and valley plates, sump pans, and cant strips, as required to provide a finished surface to receive roof insulation.

2.5 FABRICATION

- A. Fabricate steel decking in accordance with SDI C-2011 (composite floor deck) or SDI RD-2010 (roof deck).
1. Fabricate panels with interlocking side laps, suitable for specified side-lap attachment method.
- B. Provide in lengths to be continuous for three spans and rest on a minimum of four supports, wherever steel layout permits. Where decking cannot be continuous for two spans, increase deck gage as required to support temporary loads at acceptable deflections.
- C. Conform to tolerances of SDI C-2011 (composite floor deck) or SDI RD-2010 (roof deck).

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine construction to support decking to verify that setting conditions are proper.
- B. Verify that surfaces to receive decking are clean and otherwise suitable to receive deck attachments.
- C. Do not proceed with installation until unsatisfactory conditions are corrected.

3.2 INSTALLATION

- A. Install decking in accordance with Contract Documents, SDI C-2011 (composite floor deck) or SDI RD-2010 (roof deck), and manufacturer's recommendations.
- B. Locate end joints over supporting members and ensure not less than two inches bearing of each panel on support.
1. Butt end joints of floor deck tight at center line of structural support.
 2. Lap end joints of roof deck not less than two inches, unless otherwise noted.
- C. Secure deck to steel supporting members with arc spot (puddle) welds or arc seam welds, or approved powder driven fasteners, as designated on Drawings or approved by Owner's Representative. Take special care to secure solid attachment where deck is warped or sloped.
1. Perform welding in accordance with AWS D1.3.
 2. Puddle welds shall have a minimum effective fusion area of 1/2 inches in diameter and a visible diameter of 5/8 inch at surface. Arc seam welds shall have a minimum effective fusion area of 3/8 inches by 1 inch. Weld metal shall penetrate all layers of deck material and shall have good fusion to supporting members.
 3. Shear connector studs welded through deck replace deck puddle welds on a one-for-one basis, wherever there is one inch minimum clearance from stud centerline to edge of deck.
- D. Connect sidelaps of floor deck to receive structural concrete fill as indicated on Contract Drawings.
1. Top Seam Weld: Clinch first to get contact of lips and make 1½ inch long weld which engages top of inner leg.
 2. Specialty Sidelap Connection: VSC connection made with PunchLok tool by Verco Decking, DeltaGrip connection by ASC Steel Deck, or approved equal by other manufacturers.

3. Button Punch: Use hand or pneumatic tool intended to button punch steel deck side laps. Adjust button depth to provide fully interlocking punches without tear-through. Ensure lips are fully engaged, follow behind punching, standing on punched deck. Do not walk in front of punching process.

- E. Connect sidelaps of roof deck, including roof deck to receive insulating concrete fill, using top seam welds at spacing designated on Drawings.
 1. Top Seam Weld: Clinch first to get contact of lips and make 1½ inch long weld which engages top of inner leg.
 2. Touch-up paint welds at roof deck.

- F. Shear Connector Studs: Automatically end weld in accordance with AWS D1.1 and manufacturer's recommendations in such a manner as to provide complete fusion between the end of the stud and steel member. There shall be no porosity or evidence of lack of fusion between the end of the stud and the steel member.
 1. Studs welded to beams framing perpendicular to deck flutes shall be placed as close as practical to center of deck flute.

- G. Reinforce small openings as indicated on Drawings, making welded connections in accordance with AWS D1.3.

3.3 FIELD QUALITY CONTROL

- A. Inspection and testing will be performed under in accordance with procedures and administrative requirements of Division 01 Section "Quality Requirements".

- B. Testing Laboratory shall:
 1. Special inspect deck installation for conformance to Quality Assurance requirements of SDI QA/QC – 2017.
 2. Periodically inspect and test deck welding as required by CBC Chapter 17 in accordance with AWS D1.3. Review materials and qualification of welders and procedures prior to start of work, periodically inspect welding in progress, and perform final visual inspection of all welds.
 3. Periodically inspect and test welding of shear connector studs as required by CBC Chapter 17, in accordance with AWS D1.1.

END OF SECTION

SECTION 054000 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Exterior non-load-bearing wall framing.
- B. Related Requirements:
 - 1. Section 055000 "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
 - 2. Section 092116.23 "Gypsum Board Shaft Wall Assemblies" for interior non-load-bearing, metal-stud-framed, shaft-wall assemblies, with height limitations.
 - 3. Section 092216 "Non-Structural Metal Framing" for standard, interior non-load-bearing, metal-stud framing, with height limitations and ceiling-suspension assemblies.

1.2 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Cold-formed steel framing materials.
 - 2. Post-installed anchors.
 - 3. Power-actuated anchors.
- B. Shop Drawings:
 - 1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
 - 2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of code-compliance certification for studs and tracks.
- B. Product Test Reports: For each listed product, for tests performed by a qualified testing agency.
 - 1. Steel sheet.
 - 2. Expansion anchors.
 - 3. Power-actuated anchors.
 - 4. Mechanical fasteners.
 - 5. Miscellaneous structural clips and accessories.
- C. Research Reports:
 - 1. For nonstandard cold-formed steel framing post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.
- B. Product Tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment, indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

- C. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Stud Manufacturers Association.
- D. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
- E. AISI Specifications and Standards: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" and its "Standard for Cold-Formed Steel Framing - General Provisions."

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect and store cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI S202.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. CEMCO; California Expanded Metal Products Co.
 - 2. ClarkDietrich.
 - 3. Olmar Supply, Inc.
 - 4. SCAFCO Steel Stud Company.

2.2 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated.
 - 1. Design Loads: As indicated on Drawings.
 - 2. Deflection Limits: Design framing systems to withstand design loads indicated on Drawings without deflections greater than the following:
 - a. Exterior Non-Load-Bearing Framing: Horizontal deflection of L/240 of the wall height.
 - 3. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
 - a. Upward and downward movement of 3/4 inch.
 - 4. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
- B. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing complies with AISI S100 and AISI S240.
- C. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency acceptable to authorities having jurisdiction.

2.3 COLD-FORMED STEEL FRAMING MATERIALS

- A. Framing Members, General: Comply with AISI S240 for conditions indicated.
- B. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:
 - 1. Grade: As required by structural performance.
 - 2. Coating: G60, A60, AZ50, or GF30.

2.4 EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
 - 1. Minimum Base-Metal Thickness: As indicated or required by performance requirements, but not less than 18 gauge.
 - 2. Flange Width: 1-3/8 inches.
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
 - 1. Minimum Base-Metal Thickness: As indicated or required by performance requirements, but not less than 18 gauge.
 - 2. Flange Width: 1-1/2 inches.
- C. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
 - 1. Minimum Base-Metal Thickness: As indicated or required by performance requirements, but not less than 18 gauge.
 - 2. Flange Width: 1 inch plus the design gap for one-story structures and 1 inch plus twice the design gap for other applications.
- D. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.
 - 1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
 - a. Minimum Base-Metal Thickness: As indicated or required by performance requirements, but not less than 18 gauge.
 - b. Flange Width: 1 inch plus the design gap for one-story structures and 1 inch plus twice the design gap for other applications.
 - 2. Inner Track: Of web depth indicated, and as follows:
 - a. Minimum Base-Metal Thickness: As indicated or required by performance requirements..
 - b. Flange Width: Dimension equal to sum of outer deflection track flange width plus 1 inch.

2.5 FRAMING ACCESSORIES

- A. Fabricate steel-framing accessories from ASTM A1003/A1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members.

2.6 ANCHORS, CLIPS, AND FASTENERS

- A. Steel Shapes and Clips: ASTM A36/A36M, zinc coated by hot-dip process according to ASTM A123/A123M.

- B. Anchor Bolts: ASTM F1554, Grade 36, threaded carbon-steel hex-headed bolts, carbon-steel nuts, and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A153/A153M, Class C.
- C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308 as appropriate for the substrate.
 - 1. Uses: Securing cold-formed steel framing to structure.
 - 2. Type: Torque-controlled expansion anchor, torque-controlled adhesive anchor or adhesive anchor.
 - 3. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 or Group 2 stainless steel bolts, ASTM F593, and nuts, ASTM F594.
- D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- E. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.
 - 1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.
- F. Welding Electrodes: Comply with AWS standards.

2.7 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: ASTM A780/A780M MIL-P-21035B SSPC-Paint 20.
- B. Cement Grout: Portland cement, ASTM C150/C150M, Type I; and clean, natural sand, ASTM C404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
- C. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C1107/C1107M, and with a fluid consistency and 30-minute working time.
- D. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

2.8 FABRICATION

- A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
 - 1. Fabricate framing assemblies using jigs or templates.
 - 2. Cut framing members by sawing or shearing; do not torch cut.
 - 3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating joined members by no fewer than three exposed screw threads.
 - 4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

- B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.
- C. Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable variation of 1/8 inch in 10 feet and as follows:
 - 1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error are not to exceed minimum fastening requirements of sheathing or other finishing materials.
 - 2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.
- B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that required to obtain fire-resistance ratings indicated. Protect remaining fire-resistive materials from damage.
- C. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch to ensure a uniform bearing surface on supporting concrete or masonry construction.

3.3 INSTALLATION, GENERAL

- A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.
- B. Install cold-formed steel framing according to AISI S200, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.
- C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
 - 1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.
- D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
 - 1. Cut framing members by sawing or shearing; do not torch cut.
 - 2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

- b. Locate mechanical fasteners, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.
- E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
- F. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.
- H. Install insulation, specified in Section 072100 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.
- I. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

3.4 INSTALLATION OF EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
- B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:
 - 1. Stud Spacing: As indicated on Drawings, but not more than 16 inches on center
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
 - 1. Install single deep-leg deflection tracks and anchor to building structure.
 - 2. Install double deep-leg deflection tracks and anchor outer track to building structure.
- E. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 INSTALLATION TOLERANCES

- A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
 - 1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error are not to exceed minimum fastening requirements of sheathing or other finishing materials.

3.6 REPAIR

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

3.7 FIELD QUALITY CONTROL

- A. Field and shop welds will be subject to testing and inspecting.

- B. Cold-formed steel framing will be considered defective if it does not pass inspections.
- C. Additional inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.8 PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 054000

SECTION 055000 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Steel framing and supports for countertops.
 2. Steel framing and supports for mechanical and electrical equipment where framing and supports are not specified in other Sections.
 3. Slotted-channel framing for equipment support applications where slotted-channel framing and supports are not specified in other Sections.
 4. Steel framing and supports for applications where framing and supports are not specified in other Sections.
 5. Metal ladders.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

- A. Shop Drawings: Show fabrication and installation details for metal fabrications.
1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and attachment to building structure, and accessory items. Include shop drawings for the following:
 - a. Miscellaneous framing and supports for applications and support of equipment where framing and supports are not specified in other Sections.
 - b. Steel framing and supports for countertops, unless manufactured brackets are proposed.
 - c. Metal ladders.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Provide the following upon request:
1. Welding certificates.
 2. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Criteria for the design and installation of lateral force anchorage for non-structural components of the Project including walls, cladding, ladders, mechanical and electrical equipment supports, ductwork hangers, piping supports, and other miscellaneous supports as identified in Tables 13.5-1 and 13.6-1 of ASCE 7 and the programmatic equipment installed under these contract documents shall be restrained to resist lateral forces in accordance with the following requirements, unless otherwise indicated:
 - 1. The bracing and anchorage of all building related or conventional non-structural elements, shall comply with Chapter 13 of ASCE 7.
 - 2. Equipment that is not attached to a building structure or supported by a non-building structure covered in Chapter 15 of ASCE 7 shall be designed per the provisions of Chapter 13. Either Chapter 13 or 15 can be used to design non-building structures that are inside buildings and are only attached to the building's foundation.
 - 3. Refer to structural drawings.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
 - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 METALS

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
 - 1. Galvanize steel where exposed to weather and where indicated.
- B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Steel Tubing: ASTM A 500/A 500M, cold-formed steel tubing.
- D. Steel Pipe: ASTM A 53/A 53M, Standard Weight (Schedule 40) unless otherwise indicated.
- E. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
 - 1. Size of Channels: 1-5/8 by 1-5/8 inches unless otherwise required by performance requirements and equipment loads.
 - 2. Material: Galvanized steel, ASTM A 653/A 653M, , with G90 coating; 0.108-inch nominal thickness unless otherwise required by performance requirements and equipment loads.

2.3 FASTENERS

- A. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.
- C. Machine Screws: ASME B18.6.3.
- D. Lag Screws: ASME B18.2.1.

- E. Plain Washers: Round, ASME B18.22.1.
- F. Lock Washers: Helical, spring type, ASME B18.21.1.
- G. Anchors, General: Anchors tested in accordance with the ICC-ES Acceptance Criteria for Mechanical Anchors in Concrete Elements (AC193), which incorporate requirements in ACI 355.2/ACI 255.2 for use in cracked and uncracked concrete.
- H. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) or Group 2 (A4) stainless steel bolts, ASTM F593, and nuts, ASTM F594.
- I. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 1-5/8 by 7/8 inches by length indicated with anchor straps or studs not less than 3 inches long at not more than 8 inches o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B 633, Class Fe/Zn 5, as needed for fastening to inserts.

2.4 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Shop Primer: Refer to Section 099123 "Interior Painting," Section 099113 "Exterior Painting," or Section 099600 "High-Performance Coatings" to suit application.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.
- F. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.5 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.6 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
1. Fabricate units from slotted channel framing where indicated.
 2. Furnish inserts for units installed after concrete is placed.
- C. Prime interior miscellaneous framing and supports with zinc-rich primer. Paint exposed metal.
- D. Galvanize and prime steel supports exposed to water sources and exterior. Paint exposed metal.

2.7 METAL LADDERS

- A. General:
1. Comply with ANSI A14.3, except for elevator pit ladders.
 2. For elevator pit ladders, comply with ASME A17.1/CSA B44.
- B. Steel Ladders:
1. Space siderails 18 inches apart unless otherwise indicated.
 2. Siderails: Continuous, steel flat bars, with eased edges. Refer to Drawings for sizes.
 3. Rungs: 3/4-inch- diameter, steel bars.
 4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
 5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
 6. Support each ladder at top and bottom and not more than 60 inches o.c. with welded or bolted steel brackets.
 7. Galvanize exterior ladders, including brackets.

8. Prime interior ladders, including brackets and fasteners, with zinc-rich primer. Paint exposed metal.

2.8 PERSONAL FALL ARREST DEVICES

- A. Personal Fall Arrest Devices; For ladders over 20 feet above finished grade, provide manufactured system consisting of pipe, channels or stainless steel cables designed to be secured to ladder. Include mounting brackets, and traveling devices for complete installed system.
 1. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, include but are not limited to, the following:
 - a. FixFastUSA.
 - b. Granger Inc.
 - c. Industrial Safety Products.
 2. Pipe and channels shall be aluminum, galvanized steel or stainless steel

2.9 FINISHES, GENERAL

- A. Finish metal fabrications after assembly.
- B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.10 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.
 1. Hot-dip galvanize exterior steel fabrications exposed to weather.
 2. Hot-dip galvanize units after assembly.
 3. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion, unless otherwise indicated.
- B. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
 1. Shop prime with primers specified in Section 099123 "Interior Painting" or Section 099113 "Exterior Painting," unless primers specified in Section 099600 "High-Performance Coatings" are indicated.
 2. Galvanized steel, including metallic-coated (galvanealed) steel, need not be shop primed, unless otherwise indicated. Clean as instructed by paint manufacturer prior to finishing.
- C. Preparation for Shop Priming: Prepare surfaces as specified in Section 099123 "Interior Painting," Section 099113 "Exterior Painting," or Section 099600 "High-Performance Coatings" to suit application indicated.
- D. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop priming.
 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
- E. Repairing Galvanized Surfaces: Clean welds and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M prior to painting.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports securely to, and rigidly brace from, building structure.

3.3 INSTALLATION OF METAL LADDERS

- A. Secure ladders to adjacent construction with the clip angles attached to the stringer.
- B. Install brackets as required for securing of ladders welded or bolted to structural steel or built into masonry or concrete.

3.4 ADJUSTING AND CLEANING

- A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099123 "Interior Painting."
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

END OF SECTION

SECTION 055113 - METAL PAN STAIRS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Commercial class steel stairs with concrete-filled landings and treads.
2. Architectural class steel stairs with precast concrete treads and landings.
3. Steel tube railings and guards attached to interior metal stairs.
4. Steel tube handrails attached to walls adjacent to interior metal stairs.
5. Railing gates at the level of exit discharge, as indicated or required.

B. Related Requirements:

1. Section 055213 "Pipe and Tube Railings" for exterior railings.
2. Section 099600 "High-Performance Coatings" for exposed steel finishes.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs, railings, and guards.
1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, blocking for attachment of wall-mounted handrails, and items with integral anchors, that are to be embedded in concrete or masonry.
 2. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so they do not encroach on required stair width and are within fire-resistance-rated stair enclosure.
- D. Schedule installation of railings and guards so wall attachments are made only to completed walls.
1. Do not support railings and guards temporarily by any means that do not satisfy structural performance requirements.

1.3 ACTION SUBMITTALS

A. Shop Drawings:

1. Include plans, elevations, sections, details, and attachments to other work.
2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
3. Include plan at each level.
4. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.
5. Include railings and attachment to stairs and adjacent Work.
6. Include precast tread and landing profile details and details of attachment of precast units to steel framing.

B. Samples for Initial Selection: For products involving selection of color, texture, or design, including mechanical finishes.

1. Include options for wall- and post- mounted handrail brackets for selection of type and material.
2. For precast concrete finish and color, if not providing basis-of-design product and finish indicated, provide manufacturer's standard color chips or charts for Architect's selection.

- C. Samples for Verification: Railings; for each type of exposed finish required, and the following.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters, including finish and treatment of welding.
 - 2. Fittings and brackets.
- D. Samples for Verification: Precast concrete units; for precast concrete finish and color; manufacturers standard size.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
- C. Provide the following upon request:
 - 1. Welding certificates.
 - 2. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
 - 1. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 - 2. Protect steel members and packaged materials from corrosion and deterioration.
 - 3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.
 - a. Repair or replace damaged materials or structures as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance of Stairs: Metal stairs withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Uniform Load: 100 lbf/sq. ft..
 - 2. Concentrated Load: 300 lbf applied on an area of 4 sq. in..
 - 3. Uniform and concentrated loads need not be assumed to act concurrently.
 - 4. Stair Framing: Capable of withstanding stresses resulting from railing and guard loads in addition to loads specified above.
 - 5. Limit deflection of treads, platforms, and framing members to $L/360$ or 1/2 inch, whichever is less.
- B. Structural Performance of Railings and Guards: Railings and guards, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
 - b. Infill load and other loads need not be assumed to act concurrently.
 3. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - a. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
- C. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to ASCE/SEI 7.
1. Component Importance Factor: 1.5.

2.2 METALS

- A. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Steel Tubing for Railings and Guards: ASTM A500/A500M (cold formed) or ASTM A513/A513M.
- D. Uncoated, Cold-Rolled Steel Sheet: ASTM A1008/A1008M, either commercial steel, Type B, or structural steel, Grade 25, unless another grade is required by design loads; exposed.
- E. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, either commercial steel, Type B, or structural steel, Grade 30, unless another grade is required by design loads.
- F. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.

2.3 FASTENERS

- A. General: Provide zinc-plated fasteners with coating complying with ASTM B633, and Class Fe/Zn 5 where built into exterior walls.
 1. Select fasteners for type, grade, and class required.
- B. Fasteners for Anchoring Railings and Guards to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings and guards to other types of construction indicated and capable of withstanding design loads.
- C. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A; with hex nuts, ASTM A563; and, where indicated, flat washers.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563; and, where indicated, flat washers.
- E. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.

2.4 MISCELLANEOUS MATERIALS

- A. Handrail Wall Brackets, Commercial Class: Cast iron, center of handrail 2-1/2 inches (79.4 mm) from face of railing to wall or post; type to be selected by Architect.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Blum, Julius & Co., Inc.
 - b. The Wagner Companies.
- B. Welding Electrodes: Comply with AWS requirements.
- C. Shop Primers: Provide primers that comply with Section 099600 "High-Performance Coatings."
- D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- E. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout; recommended by manufacturer for interior use; noncorrosive and nonstaining; mixed with water to consistency suitable for application and a 30-minute working time.
- F. Prefilled Concrete Treads: Contractor's option for Commercial class stairs.
 - 1. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with minimum 28-day compressive strength of 3000 psi and maximum aggregate size of 1/2 inch unless otherwise indicated.
 - 2. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.
 - 3. Plain Steel Welded-Wire Reinforcement: ASTM A1064/A10645M, galvanized steel, 6 by 6 inches, W1.4 by W1.4, unless otherwise indicated on Drawings.
 - a. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
 - 4. Reinforcement Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening welded-wire reinforcement in place.
 - a. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete.

2.5 PRECAST CONCRETE TREADS AND LANDINGS

- A. Precast Concrete Stair Treads and Landings (CONC-3): Precast concrete units cast in maximum lengths possible with full closed riser. Comply with manufacturer's written instructions for fabricating precast units in sizes and profiles indicated.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Bertelson Precast.
 - b. Empire Precast.
 - c. Stepstone LLC.
 - d. Wausau Tile (Basis-of-Design)
- B. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for Type III, normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of 5000 psi and a total air content of not less than 6 percent or more than 8 percent with water-cement ratio of 0.45. Pigments used shall be inorganic, resistant to alkalinity and used per manufacturer's recommendations. Maximum deflection: L/720.

1. Finish: Wausau "Premium Ground and Polished"
 - a. Basis-of-Design Color: Wausau Misty Gray G33, or Architect approved equal by submitted manufacturer.
 2. Abrasive Inserts: A (13-mm-)lundum oxide/epoxy mix, silca sand/epoxy mix, or similar as standard for manufacturer.
 - a. Provide CBC-compliant inserts, solid or ribbed as standard with manufacturer with first insert located 1 inch (25 mm) from nosing at locations indicated on Drawings.
 - 1) Color: Contrasting in color selected by Architect.
 3. Platform Size and Weight Limitations: Eliminate joints in platform landings to greatest extent possible.
 - a. Where joints are unavoidable, provide only as shown on approved Shop Drawings; not more than 1/4 inch wide.
 - 1) Seal joints with manufacturer's recommended urethane joint sealant in accordance with Section 079200 "Joint Sealants" in color selected by Architect.
- C. Reinforcement: Galvanized, welded-wire reinforcement, 2 by 2 inches by 0.062-inch- diameter steel wire, unless otherwise provided by manufacturer; comply with ASTM A1064/A1064M, except for minimum wire size. Provide galvanized deformed rebar cages for longspan units as standard with manufacturer.
- D. Sizing Tolerances:
1. Units shall conform to approved Shop Drawings with a (+/-) 1/8 inch tolerance in dimension over 10 feet.
- E. Precast Surfaces and Edges:
1. Exposed edges shall have minimum of 1/8 inch radius to prevent chipping.
 2. Finished surfaces shall match approved control sample.
 3. Precast concrete finished surfaces shall be factory sealed.
 - a. Sealer: Colorless, pure acrylic water repellent sealer. Sealer to maintain natural look of concrete surface with no glaze or gloss, darkening or color change.

2.6 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, railings and guards, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs, railings, and guards in shop to greatest extent possible.
1. Disassemble units only as necessary for shipping and handling limitations.
 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
1. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated.
 2. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.

- F. Weld connections to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Weld exposed corners and seams continuously unless otherwise indicated.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
 - 1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
 - 2. Locate joints where least conspicuous.

2.7 FABRICATION OF STEEL-FRAMED STAIRS - ARCHITECTURAL CLASS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Architectural Class, unless more stringent requirements are indicated.
- B. Stair Framing:
 - 1. Stringers: Fabricate of steel plates or steel channels or steel rectangular tubes as indicated on Drawings.
 - a. Stringer Size: As required to comply with "Performance Requirements" Article profiled as indicated on Drawings.
 - b. Provide closures for exposed ends of channel and rectangular tube stringers.
 - c. Exposed Finish: Painted according to Section 099600 "High-Performance Coatings."
 - 2. Platforms: Construct of steel plate or steel channel or steel rectangular tube headers and miscellaneous framing members as required to comply with "Performance Requirements" Article.
 - a. Provide closures for exposed ends of channel and rectangular tube framing.
 - b. Exposed Finish: Painted according to Section 099600 "High-Performance Coatings."
 - 3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
 - 4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings from floor construction above or below.
 - a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
- C. Precast Treads and Landings: Form treads with integral risers and landings to configurations shown.
 - 1. Directly weld tread and landing support angle brackets to stringers and platform framing.
 - a. Size angle brackets and, inserts and anchors to carry loads on treads and landings.
 - b. Smooth Soffit Construction: Provide flat metal or gypsum board under exposed soffit surfaces to produce smooth soffits as shown, concealing underside of stair framing and welds and brackets.
 - 2. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 - No evidence of welded joint.

2.8 FABRICATION OF STEEL-FRAMED STAIRS – COMMERCIAL CLASS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Commercial Class, unless more stringent requirements are indicated.
- B. Stair Framing:

1. Stringers: Fabricate of steel plates or steel channels or steel rectangular tubes as indicated on Drawings.
 - a. Stringer Size: As required to comply with "Performance Requirements" Article profiled as indicated on Drawings.
 - b. Provide closures for exposed ends of channel and rectangular tube stringers.
 - c. Exposed Finish: Painted according to Section 099600 "High-Performance Coatings."
 2. Platforms: Construct of steel plate or steel channel or steel rectangular tube headers and miscellaneous framing members as required to comply with "Performance Requirements" Article.
 - a. Provide closures for exposed ends of channel and rectangular tube framing.
 - b. Exposed Finish: Painted according to Section 099600 "High-Performance Coatings."
 3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
 4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings from floor construction above or below.
 - a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
- C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.067 inch.
1. Steel Sheet, Uncoated: Hot-rolled steel sheet unless otherwise indicated.
 2. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.
 3. Shape metal pans to include nosing integral with riser.
 4. At Contractor's option, provide stair assemblies with metal pan subtreads pre-filled with reinforced concrete during fabrication.
 5. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
 6. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish # 4 - Good quality, uniform undressed weld with minimal splatter.

2.9 FABRICATION OF STAIR RAILINGS AND GUARDS

- A. Architectural Class: Comply with applicable requirements in Section 057300 "Decorative Metal Railings."
- B. Commercial Class: Comply with the following.
 1. Fabricate railings and guards to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of member, post spacings, wall bracket spacing, and anchorage, but not less than that needed to withstand indicated loads.
 - a. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with cam-type, self-closing hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.
 2. Welded Connections: Fabricate railings and guards with welded connections.
 - a. Fabricate connections that are exposed to weather in a manner that excludes water.
 - b. Cope components at connections to provide close fit, or use fittings designed for this purpose.
 - c. Weld all around at connections, including at fittings.
 - d. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - e. Obtain fusion without undercut or overlap.
 - f. Remove flux immediately.
 - g. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" as follows:
 - 1) Commercial Class: Finish #2 - Completely sanded joint, some undercutting and pinholes are okay as shown in NAAMM AMP 521.

- C. Form changes in direction of railings and guards as follows:
 - 1. As detailed.
 - 2. By bending to smallest radius possible without causing deformation.
- D. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- E. Close exposed ends of railing and guard members with prefabricated end fittings.
- F. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated.
- G. Connect posts to stair framing by direct welding unless otherwise indicated.
- H. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work.
 - 1. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
 - 2. For nongalvanized railings and guards, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves.
- I. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports.
 - 1. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.10 FINISHES

- A. Finish metal stairs after assembly.
- B. Preparation for Shop Priming: Prepare uncoated, ferrous-metal surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."
- C. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- D. Paint shop-primed metal stairs and railings as indicated in Section 099600 "High-Performance Coatings."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
 - 1. For wall-mounted railings, verify locations of concealed reinforcement within gypsum board and plaster assemblies.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF METAL PAN STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.

1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 1. Grouted Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates.
 - a. Clean bottom surface of plates.
 - b. Set plates for structural members on wedges, shims, or setting nuts.
 - c. Tighten anchor bolts after supported members have been positioned and plumbed.
 - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates so no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints.
 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 2. Do not weld, cut, or abrade surfaces of units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 3. Comply with requirements for welding in "Fabrication, General" Article.
- F. Place and finish concrete fill for treads and platforms at Commercial Class stairs to comply with Section 033000 "Cast-in-Place Concrete."
- G. Install precast concrete treads and landings onto steel stair framing at Architectural Class stairs.
 1. Bolt precast concrete treads and landings through steel angles into threaded inserts according to precast manufacturer's written instructions and approved Shop Drawings.

3.3 INSTALLATION OF RAILINGS AND GUARDS

- A. Adjust railing and guard systems before anchoring to ensure matching alignment at abutting joints with tight, hairline joints.
 1. Space posts at spacing indicated or, if not indicated, as required by design loads.
 2. Plumb posts in each direction, within a tolerance of 1/16 inch in 3 feet.
 3. Align rails and guards so variations from level for horizontal members and variations from parallel with rake of stairs for sloping members do not exceed 1/4 inch in 12 feet.
 4. Secure posts, rail ends, and guard ends to building construction as follows:
 - a. Anchor posts to steel by welding to steel supporting members.
 - b. Anchor handrail and guard ends to concrete and masonry with steel round flanges welded to rail and guard ends and anchored with post-installed anchors and bolts.
- B. Install railing gates level, plumb, and secure for full opening without interference.
 1. Attach hardware using tamper-resistant or concealed means.

2. Adjust hardware for smooth operation.
- C. Attach handrails to wall with wall brackets.
1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 2. Secure wall brackets to building construction as required to comply with performance requirements.

3.4 REPAIR

- A. Touchup Painting:
1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

END OF SECTION 055113

SECTION 055213 - PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Exterior galvanized steel railings.
- B. Related Requirements:
 - 1. Section 055113 "Metal Pan Stairs" for steel tube railings associated with interior Commercial class metal pan stairs.
 - 2. Section 057300 "Decorative Metal Railings" for ornamental railings attached to Architectural class stairs.
 - 3. Section 099600 "High-Performance Coatings" for exposed steel stair finishes.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

- A. Shop Drawings: Include plans, elevations, sections, and details of metal railings, and attachments to other work.
- B. Samples for Initial Selection: For products involving selection of color, texture, or design, including mechanical finishes. Include options for wall- and post- mounted handrail brackets for selection of type.
- C. Samples for Verification: For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters, including finish and treatment of welding.
 - 2. Fittings and brackets.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Provide the following upon request:
 - 1. Welding certificates.
 - 2. Product Test Reports: For tests on railings performed by a qualified testing agency, in accordance with ASTM E894 and ASTM E935.
 - 3. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces of railings from damage by applying a strippable, temporary protective covering before shipping.

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Railings, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
 - b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
 - b. Infill load and other loads need not be assumed to act concurrently.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
 - 1. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt or with predrilled holes for exposed bolt anchorage and that provides 1-1/2-inch (38-mm) clearance from inside face of handrail to finished wall surface.

2.3 STEEL RAILINGS

- A. Tubing: ASTM A500/A500M (cold formed) ASTM A513/A513M, Type 5.
- B. Pipe: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
- C. Plates, Shapes, and Bars: ASTM A36/A36M.
- D. Cast Iron Fittings: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.

2.4 FASTENERS

- A. Fastener Materials:
 - 1. Hot-Dip Galvanized Railing Components: Type 304 stainless steel or hot-dip zinc-coated steel fasteners complying with ASTM A153/A153M or ASTM F2329/F2329M for zinc coating.
 - 2. Finish exposed fasteners to match appearance, including color and texture, of railings.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction and capable of withstanding design loads.
- C. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308.
 - 1. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) or Group 2 (A4) stainless steel bolts, ASTM F593, and nuts, ASTM F594.

2.5 MISCELLANEOUS MATERIALS

- A. Handrail Brackets: Center of handrail 2-1/2 inches (79.4 mm) from face of railing to wall or post; type to be selected by Architect.
- B. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for metal alloy welded.
- C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint, complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated complying with Section 099600 "High-Performance Coatings."
- F. Intermediate Coats and Topcoats: Provide products that comply with Section 099600 "High-Performance Coatings."
- G. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout, complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- H. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Product: At exterior locations where indicated on Drawings, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.6 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
 - 1. Clearly mark units for reassembly and coordinated installation.

2. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately.
 1. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated.
 2. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water.
 1. Provide weep holes where water may accumulate.
 2. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with welded connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove flux immediately.
 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 welds; ornamental quality with no evidence of a welded joint.
- I. Form changes in direction as follows:
 1. By bending to smallest radius that will not result in distortion of railing member.
- J. Bend members in jigs to produce uniform curvature for each configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- K. Close exposed ends of hollow railing members with prefabricated cap and end fittings of same metal and finish as railings.
- L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.
- M. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- N. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work.
 1. Fabricate anchorage devices capable of withstanding loads imposed by railings.
 2. Coordinate anchorage devices with supporting structure.

2.7 STEEL AND IRON FINISHES

- A. Galvanized Railings:
 1. Hot-dip galvanize exterior steel railings, including hardware, after fabrication.
 2. Comply with ASTM A123/A123M for hot-dip galvanized railings.

3. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
 4. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 5. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner and as follows.
1. Comply with SSPC-SP 16.
- D. **High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1 for shop painting. Apply at spreading rates recommended by coating manufacturer.**
1. **Color: As selected by Architect from paint manufacturer's full range.**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

- A. Perform cutting, drilling, and fitting required for installing railings.
1. Fit exposed connections together to form tight, hairline joints.
 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 4. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 5. Set posts plumb within a tolerance of 1/16 inch in 3 feet (2 mm in 1 m).
 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet (6 mm in 3.5 m).
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- C. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.

- B. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve, extending 2 inches (50 mm) beyond joint on either side; fasten internal sleeve securely to one side; and locate joint within 6 inches (150 mm) of post.

3.4 ANCHORING POSTS

- A. Anchor posts to metal surfaces with flanges, angle type, or floor type, as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For steel railings, weld flanges to post and bolt to metal supporting surfaces.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with brackets on underside of rails connected to railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends.
- C. Attach handrails to walls with wall brackets, except where end flanges are used. Provide brackets with 1-1/2-inch (38-mm) clearance from inside face of handrail and finished wall surface.
 - 1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
 - 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- D. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements, using self-tapping screws of size and type required to support structural loads, or use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.
- E. Install railing gates level, plumb, and secure for full opening without interference.
 - 1. Attach hardware using tamper-resistant or concealed means.
 - 2. Adjust hardware for smooth operation.

3.6 REPAIR

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099600 "High-Performance Coatings."

3.7 CLEANING

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A780/A780M.

3.8 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

- B. Restore finishes damaged during installation and construction period, so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 055213

SECTION 057300 - DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel picket decorative railings and handrails.
- B. Related Requirements:
 - 1. Division 05 Section "Pipe and Tube Railings" for interior back-of-house steel railings made from steel tubes.
 - 2. Division 09 Section "Non-Structural Metal Framing" for metal backing for anchoring railings.

1.2 DEFINITIONS

- A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas and for pedestrian guidance and support, visual separation, or wall protection.

1.3 COORDINATION AND SCHEDULING

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not meet structural performance requirements.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Manufactured railing infill materials and related components.
 - 2. Grout and anchoring cement.
- B. Shop Drawings: Dimensioned drawings of railing assemblies. Include plans, elevations, sections, and attachment details. Show joint locations, transitions, and terminations. Provide Shop Drawings specific to this Project, complete with attachments and means of interface with other finish materials.
- C. Samples for Verification: For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 - 2. Fittings and brackets.
 - 3. Welded connections.
 - 4. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections. Samples need not be full height.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

- B. Evaluation Reports: For post-installed anchors, from ICC-ES.

1.6 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups for each form and finish of railing consisting of two posts, top rail, infill area, and anchorage system components that are full height and are not less than 24 inches in length.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
 - 1. Steel: 72 percent of minimum yield strength.
- B. Structural Performance: Railings, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior railings by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
 - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.
 - 1. Provide cast-metal brackets with flange tapped for concealed anchorage to threaded hanger bolt.
 - 2. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.

3. Provide formed-steel brackets with predrilled hole for bolted anchorage and with snap-on cover that matches rail finish and conceals bracket base and bolt head.
4. Provide extruded-aluminum brackets with interlocking pieces that conceal anchorage. Locate set screws on bottom of bracket.

2.3 STEEL AND IRON

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Tubing: ASTM A500/A500M (cold formed) or ASTM A513.
- C. Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.
- D. Plates, Shapes, and Bars: ASTM A36/A36M.

2.4 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
 1. Uncoated Steel Components: Plated-steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed; Type 304 stainless steel fasteners where exposed.
 2. Dissimilar Metals: Type 304 stainless steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.
- C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless otherwise indicated.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193.
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.

2.5 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- C. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- D. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 1. Water-Resistant Product: At exterior locations provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.6 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with welded connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 welds; no evidence of a welded joint.
- I. Form changes in direction as follows:
 - 1. As detailed.
- J. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- K. Close exposed ends of hollow railing members with prefabricated end fittings.
- L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch or less.
- M. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
 - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.
- N. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.
- O. For railing posts set in concrete, provide stainless steel sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with metal plate forming bottom closure.

2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.8 STEEL FINISHES

- A. For nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves.
- B. Steel Railings: Shop prime and paint according to section 099600 "High-Performance Coatings."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.
- B. Examine cast-in-place concrete assemblies and locate existing reinforcing to verify that locations of drilled anchorages for supporting handrails will not conflict with reinforcing. Where conflicts are encountered, obtain concurrence of structural engineer of record prior to proceeding.

3.2 INSTALLATION, GENERAL

- A. Fit exposed connections together to form tight, hairline joints.
- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
 - 1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 - 2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
 - 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.
 - 4. Align wall mounted handrails so variations in distance to supporting wall do not exceed 1/4 inch in between successive support brackets. Shim brackets as required.
- C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

- D. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches of post.

3.4 ANCHORING POSTS

- A. Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than 5 inches deep and 3/4 inch larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, or leave anchorage joint exposed, as indicated on Drawings.
- D. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For stainless steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
 - 2. For steel railings, weld flanges to posts and bolt to metal-supporting surfaces.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry as indicated on Drawings and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends or connected to railing ends using nonwelded connections, as indicated on Drawings.
- C. Attach handrails to walls with wall brackets except where end flanges are used. Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 - 1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
- D. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.

2. For steel-framed partitions, screw fastened to steel backing as indicated on Drawings. Coordinate with stud installation to locate backing members.

3.6 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.

3.7 REPAIR

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

3.8 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 057300

SECTION 061053 - MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wood blocking, cants, and nailers.
 - 2. Wood furring and grounds.
 - 3. Plywood backing panels.

- B. Related Requirements:
 - 1. Section 061600 "Sheathing" for exterior sheathing.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - 1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 - 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 - 3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D5664.
 - 4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.3 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

- B. Provide the following upon request:
 - 1. Evaluation Reports: For the following, from ICC-ES:
 - a. Preservative-treated wood.
 - b. Fire-retardant-treated wood.
 - c. Power-driven fasteners.
 - d. Post-installed anchors.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

- A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. Dress lumber, S4S, unless otherwise indicated.

B. Maximum Moisture Content of Lumber: 19 percent unless otherwise indicated.

2.2 WOOD-PRESERVATIVE-TREATED MATERIALS

A. Preservative Treatment by Pressure Process: AWP A U1; Use Category UC2 for interior construction not in contact with ground, Use Category UC3b for exterior construction not in contact with ground, and Use Category UC4a for items in contact with ground.

1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Do not use inorganic boron (SBX) for sill plates.
2. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.

B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or does not comply with requirements for untreated material.

C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

D. Application: Treat items indicated on Drawings, and the following:

1. Wood sills, sleepers, blocking, furring, and similar concealed members in contact with masonry or concrete.
2. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
3. Wood floor plates that are installed over concrete slabs-on-grade.

2.3 FIRE-RETARDANT-TREATED MATERIALS

A. General: Where fire-retardant-treated materials are indicated, materials shall comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.

1. Treatment shall not promote corrosion of metal fasteners.
2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D2898. Use for exterior locations and where indicated.
3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D3201 at 92 percent relative humidity. Use where exterior type is not indicated.
4. Design Value Adjustment Factors: Treated lumber shall be tested according to ASTM D5664, and design value adjustment factors shall be calculated according to ASTM D6841. For enclosed roof framing, framing in attic spaces, and where high-temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.

C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Kiln-dry plywood after treatment to a maximum moisture content of 15 percent.

D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.

1. For exposed lumber indicated to receive a stained or natural finish, mark end or back of each piece or omit marking and provide certificates of treatment compliance issued by inspection agency.
- E. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat items indicated on Drawings, and the following:
 1. Concealed blocking.
 2. Roof framing and blocking.
 3. Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing.
 4. Plywood backing panels.

2.4 MISCELLANEOUS LUMBER

- A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
 1. Blocking.
 2. Nailers.
 3. Rooftop equipment bases and support curbs.
 4. Cants.
 5. Furring.
- B. Dimension Lumber Items: Construction or No. 2 Standard, Stud, or No. 3 grade lumber of any species. any of the following species: the following species:
 1. Hem-fir (north); NLGA.
 2. Mixed southern pine or southern pine; SPIB.
 3. Spruce-pine-fir; NLGA.
 4. Hem-fir; WCLIB or WWPA.
 5. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
 6. Western woods; WCLIB or WWPA.
 7. Northern species; NLGA.
- C. Concealed Boards: 15 percent maximum moisture content of any of the following the following species and grades:
 1. Mixed southern pine or southern pine, No. 3 grade; SPIB.
 2. Hem-fir or hem-fir (north), Standard or No. 3 Common grade; NLGA, WCLIB, or WWPA.
 3. Spruce-pine-fir (south) or spruce-pine-fir, Standard or No. 3 Common grade; NeLMA, NLGA, WCLIB, or WWPA.
 4. Northern species, No. 3 Common grade; NLGA.
 5. Western woods, Standard or No. 3 Common grade; WCLIB or WWPA.
- D. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.
- E. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.
- F. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.5 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: Plywood, DOC PS 1, Exterior, A-C, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch nominal thickness.

2.6 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 - 1. Where carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Screws for Fastening to Metal Framing: ASTM C1002, length as recommended by screw manufacturer for material being fastened.
- D. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- E. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC58, ICC-ES AC193 or ICC-ES AC308 as appropriate for the substrate.
 - 1. Material: Carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5.
 - 2. Material: Stainless steel with bolts and nuts complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2.

2.7 MISCELLANEOUS MATERIALS

- A. Adhesives for Gluing Furring to Concrete or Masonry: Formulation complying with ASTM D3498 that is approved for use indicated by adhesive manufacturer.
- B. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, butyl rubber rubberized-asphalt compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than 0.025 inch.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
- B. Set carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit carpentry accurately to other construction. Locate furring, nailers, blocking, and similar supports to comply with requirements for attaching other construction.
- C. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.
- D. Do not splice structural members between supports unless otherwise indicated.

- E. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
 - 1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.
- F. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- G. Comply with AWP A M4 for applying field treatment to cut surfaces of preservative-treated lumber.
 - 1. Use inorganic boron for items that are continuously protected from liquid water.
 - 2. Use copper naphthenate for items not continuously protected from liquid water.
- H. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- I. Securely attach carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
 - 1. CBC Table 2304.10.1, "Fastening Schedule."
 - 2. ICC-ES evaluation report for fastener.
- J. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.2 INSTALLATION OF WOOD BLOCKING AND NAILER

- A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.
- C. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than 1-1/2 inches wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.3 INSTALLATION OF WOOD FURRING

- A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.
- B. Furring to Receive Plywood or Hardboard Paneling: Install 1-by-3-inch nominal- size furring horizontally at 24 inches o.c.
- C. Furring to Receive Gypsum Board: Install 1-by-2-inch nominal- size furring vertically at 16 inches o.c.

3.4 PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

- B. Protect miscellaneous rough carpentry from weather. If, despite protection, miscellaneous rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 061053

SECTION 061600 - SHEATHING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Exterior glass-mat wall sheathing.
 - 2. Cement board sheathing.
- B. Related Requirements:
 - 1. Section 061053 "Miscellaneous Rough Carpentry" for plywood backing panels.

1.2 ACTION SUBMITTALS

- A. Product Data Submittals: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
- B. Shop Drawings: For air-barrier and water-resistant glass-mat gypsum sheathing assemblies.
 - 1. Show locations and extent of sheathing, accessories, and assemblies specific to Project conditions.
 - 2. Include details for sheathing joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 3. Include details of interfaces with other materials that form part of air barrier.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: As tested in accordance with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 WALL SHEATHING

- A. Glass-Mat Gypsum Sheathing, Walls: ASTM C1177/C1177M.
 - 1. Products:Manufacturers Subject to compliance with requirements, provide one of the following:
 - a. Certainteed; SAINT-GOBAIN; GlasRoc.
 - b. Georgia-Pacific Gypsum LLC.; Dens-Deck Gold
 - c. National Gypsum; Gold Bond e(2)XP
 - d. USG Corporation; Securock..
 - 2. Type and Thickness: Type X, 5/8 inch thick.
- B. Cementitious Backer Units: ASTM C1325, Type A.

1. DUROCK Cement Board as manufactured by USG Corporation, or comparable by one of the following:
 - a. C-Cure.
 - b. Custom Building Products.

2.3 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 1. For roof and wall sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M or Type 304 stainless steel.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.
 1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C1002.
 2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C954.

2.4 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Refer to Section 072726 "Fluid-Applied Membrane Air Barriers" for treatment of joints and penetrations in glass-mat gypsum sheathing.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 1. California Building Code, Table 2304.10.1, "Fastening Schedule."
 2. ICC-ES evaluation report for fastener.
- D. Coordinate wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- F. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 INSTALLATION OF GYPSUM SHEATHING

- A. Comply with GA-253 and with manufacturer's written instructions.
 - 1. Fasten gypsum sheathing to framing with screws.
 - 2. Install panels with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
 - 3. Install panels with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.
- C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent panels without forcing. Abut ends over centers of studs, and stagger end joints of adjacent panels not less than one stud spacing. Attach at perimeter and within field of panel to each stud.
 - 1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels.
 - 2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- D. Vertical Installation: Install vertical edges centered over studs. Abut ends and edges with those of adjacent panels. Attach at perimeter and within field of panel to each stud.
 - 1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels.
 - 2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- E. Seal sheathing joints in accordance with sheathing manufacturer's written instructions and Section 072726 "Fluid-Applied Membrane Air Barriers".

END OF SECTION 061600

SECTION 064116 - PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Plastic-laminate-clad architectural cabinets.
 - 2. Cabinet hardware and accessories.
 - 3. Miscellaneous materials.
- B. Related Requirements:
 - 1. Section 092216 "Non-Structural Metal Framing" for reinforcements in metal-framed partitions for anchoring casework.

1.2 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.

1.3 DEFINITIONS

- A. Definitions in the AWI Glossary apply to the Work of this Section.

1.4 ACTION SUBMITTALS

- A. Product Data Submittals: For each product.
 - 1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Show large-scale details.
 - 3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 - 4. Show locations and sizes of cutouts and holes for items installed in plastic-laminate architectural cabinets.
- C. Samples for Initial Selection: For each type of exposed finish requiring selection by Architect.
- D. Samples for Verification: For the following:
 - 1. Plastic Laminates: 8 by 10 inches, for each type, color, pattern, and surface finish required.
 - a. Provide one sample applied to core material with specified edge material applied to one edge.
 - 2. Thermally Fused Laminate (TFL) Panels: 8 by 10 inches, for each color, pattern, and surface finish.
 - a. Provide edge banding on one edge.
 - 3. Corner Pieces:
 - a. Cabinet-front frame joints between stiles and rails and at exposed end pieces, 18 inches high by 18 inches wide by 6 inches deep.
 - b. Miter joints for standing trim.
 - 4. Exposed Cabinet Hardware and Accessories: One full-size unit for each type and finish.

1.5 CLOSEOUT SUBMITTALS

- A. Quality Standard Compliance Certificates: AWI Quality Certification Program or WI Certified Compliance Program certificates indicating compliance with requirements for fabrication and installation.
- B. Final Keying Schedule: Include schematic keying diagram, and index each key set to unique designations that are coordinated with the Contract Documents.

1.6 QUALITY ASSURANCE

- A. Fabricator's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of products or installer approved by fabricator. or Installer approved by fabricator.
- C. Provide the following upon request:
 - 1. Qualification Data: For Fabricator and Installer, if not fabricator.
 - 2. Product Certificates: For the following:
 - a. Composite wood products.
 - b. Thermally fused laminate panels.
 - c. High-pressure decorative laminate.
 - d. Adhesives.
 - 3. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. General: Comply with the AWI 200 - Care & Storage for delivery, storage, and handling of architectural woodwork.
- B. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.
- C. Deliver interior architectural woodwork materials only when environmental conditions meet requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions meet requirements specified for installation areas.

1.8 FIELD CONDITIONS

- A. General: Comply with the AWI 200 - Care & Storage for environmental control and acclimation requirements for storage and installation of architectural woodwork.
- B. Environmental Limitations without Humidity Control: Do not deliver or install cabinets until adjacent work in space is thoroughly protected, wet work is nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- C. Environmental Limitations with Humidity Control: Do not deliver or install cabinets until adjacent work in space is thoroughly protected, wet work is nominally dry, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.

- D. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.
- E. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR CASEWORK

- A. Quality Standard: Unless otherwise indicated, with the "Architectural Woodwork Institute - ANSI/AWI Standards" for grades of cabinets indicated for construction, finishes, installation, and other requirements. Standards indicated refer to the ANSI/AWI Standards as required to achieve certification from the AWI Quality Certification Program. Use of the Architectural Woodwork Standards (AWS, current edition) is an acceptable alternative to achieve approval from the WI Certified Compliance Program.
 - 1. Provide inspections by AWI or WI certification program inspectors of fabrication and installation indicating that woodwork complies with requirements of grades specified.
 - a. Provide certificates from AWI or WI certification program at Closeout indicating that woodwork fabrication and installation has been inspected and complies with requirements of grades specified.
 - 2. The Contract Documents contain selections chosen from options in the quality standard and may include additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard. If a conflict arises, provide the more stringent requirement.
 - 3. Contractor or fabricator shall register the Work under this Section with AWI's Quality Certification Program or WI's Certified Compliance Program, as applicable.
 - 4. AWI Standards include the following as applicable to each individual Specification Section:
 - a. AWI 100 - Submittals
 - b. AWI 200 - Care and Storage
 - c. AWI 300 - Materials
 - d. ANSI/AWI 0400 - factory Finishing
 - e. ANSI/AWI 0620 - Finish Carpentry/installation
 - f. ANSI/AWI 0641 - Architectural Wood Casework
- B. Regional Materials: Wood products shall be manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.
- C. Certified Wood: Wood products shall comply with requirements of ASTM D7612-10 (FSC, SFI, ATSM, CSA or PEFC certifications are acceptable).

2.2 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

- A. AWI Standards Grades: According to ANSI/AWI 0641-2019 - Architectural Wood Casework Standard.
 - 1. Aesthetic Grade: Custom
 - 2. Performance Duty: 3
- B. Type of Construction: Frameless.

- C. Door and Drawer-Front Style: Flush overlay.
- D. High-Pressure Decorative Laminate: ISO 4586-3, grades as indicated or if not indicated, as required by quality standard.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABET Inc.
 - b. Formica Corporation.
 - c. Laminart LLC.
 - d. Pionite; a Panolam Industries International, Inc. brand.
 - e. Wilsonart LLC.
 - 2. Basis-of-Design Products: As indicated on Drawings .
- E. Exposed Surfaces:
 - 1. Plastic-Laminate Grade: HGS.
 - 2. Edges: PVC tape, 0.018-inch minimum thickness, matching laminate in color, pattern, and finish.
- F. Semiexposed Surfaces:
 - 1. Surfaces Other Than Drawer Bodies: Thermally fused laminate panels.
 - a. Edges of Thermally Fused Laminate Panel Shelves: PVC or polyester edge banding.
 - b. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, ISO 4586-3, grade to match exposed surface.
 - 2. Drawer Sides and Backs: Thermally fused laminate panels with PVC or polyester edge banding.
 - 3. Drawer Bottoms: Thermally fused laminate panels.
- G. Dust Panels: 1/4-inch plywood or tempered hardboard above compartments and drawers unless located directly under tops.
- H. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, ISO 4583-3, grade to match exposed surface.
- I. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
 - 1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners or glued dovetail joints.
- J. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
 - 1. As indicated by laminate manufacturer's designations.

2.3 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.
 - 1. Wood Moisture Content: 5 to 10 percent.
- B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

1. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
2. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade 130.
3. Particleboard (Medium Density): ANSI A208.1, Grade M-2-Exterior Glue.
4. Softwood Plywood: DOC PS 1, medium-density overlay.
5. Thermally Fused Laminate (TFL) Panels: Particleboard or MDF finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of ISO 4586.

2.4 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products in accordance with test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced quality standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of architectural cabinets.
- C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less in accordance with ASTM E84.
1. For panels 3/4 inch thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, 1600 psi; modulus of elasticity, 300,000 psi; internal bond, 80 psi; and screw-holding capacity on face and edge, 250 and 225 lbf, respectively.
 2. For panels 13/16 to 1-1/4 inches thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, 1300 psi; modulus of elasticity, 250,000 psi; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, 250 and 175 lbf, respectively.
 3. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Arauco North America.
 - b. Timber Products, Inc.

- D. Fire-Retardant Fiberboard: MDF panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less in accordance with ASTM E84.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Roseburg.

2.5 CABINET HARDWARE AND ACCESSORIES

- A. Cabinet Hardware: Provide cabinet hardware and accessory materials associated with architectural cabinets.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Accuride International Inc.
 - b. CompX International, Inc.
 - c. Grass America.
 - d. Hardware Resources.
 - e. Hettich America L.P.
 - f. Julius Blum & Co., Inc.
 - g. Knappe & Vogt Manufacturing Company.
 - h. Sugatsune.
- B. Frameless Concealed Hinges (European Type): ANSI/BHMA A156.9, B01602, minimum 110 degrees of opening, self-closing.
- C. Pulls:
 - 1. Edge Pulls: Refer to Drawings.
- D. Adjustable Shelf Standards and Supports: ANSI/BHMA A156.9, B04071; with shelf rests, B04081.
- E. Shelf Rests: ANSI/BHMA A156.9, B04013; metal.
- F. Drawer Slides: ANSI/BHMA A156.9.
 - 1. Standard Duty (Grade 1 and Grade 2): Side mount.
 - 2. Heavy-Duty (Grade 1HD-100 and Grade 1HD-200): Side mount.
 - a. Type: Full overtravel extension.
 - b. Material: Epoxy-coated polymer slides.
 - c. Motion Feature: Soft close dampener and self-closing mechanism.
 - 3. Pencil drawers not more than 3 inches high and not more than 24 inches wide, provide 50 lb load capacity.
 - 4. General-purpose drawers more than 3 inches high, but not more than 6 inches high and not more than 24 inches wide, provide 75 lb load capacity.
 - 5. File drawers more than 6 inches high or more than 24 inches wide, provide 100 lb load capacity.
 - 6. Lateral file drawers more than 6 inches high and more than 24 inches but not more than 30 inches wide, provide 150 lb load capacity.
 - 7. Lateral file drawers more than 6 inches high and more than 30 inches wide, provide 200 lb load capacity.
 - 8. Computer keyboard tray, provide 75 lb load capacity.
- G. Door Locks: ANSI/BHMA A156.11, E07121.
- H. Drawer Locks: ANSI/BHMA A156.11, E07041.

- I. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.
- J. Grommets for Cable Passage: 2-inch OD, molded-plastic grommets and matching plastic caps with slot for wire passage.
 - 1. Color: To be selected by Architect.
- K. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated. To be selected by Architect
- L. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.6 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln-dried to less than 15 percent moisture content.
- B. Metal Backing and Reinforcement: Refer to Section 092216 "Non-Structural Metal Framing."
- C. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- D. Adhesives: Do not use adhesives that contain urea formaldehyde.
- E. Adhesive for Bonding Plastic Laminate: Type I, waterproof or Type II water-resistant type as selected by fabricator to comply with requirements.
 - 1. Adhesive for Bonding Edges: Adhesive specified above for faces, except use hot-melt adhesive in wet areas.

2.7 FABRICATION

- A. Fabricate architectural cabinets to dimensions, profiles, and details indicated.
- B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify Architect seven days in advance of the dates and times architectural cabinet fabrication will be complete.
 - 2. Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- D. When cabinets abut side walls, allow for a 1 inch filler panel between side of cabinet and wall. For floor mounted cabinets the filler panel is to include a toe kick to match casework.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.2 INSTALLATION

- A. AWI Standards Grade: Install cabinets to comply with quality standard grade of item to be installed in accordance with ANSI/AWI 0620-2018 - Finish Carpentry/Installation or Architectural Woodwork Standards as applicable to casework.
- B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.
- C. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.
- D. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches using concealed shims.
 - 1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 - 2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 - 3. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches o.c. with No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish or toggle bolts through metal backing or metal framing behind wall finish.

3.3 FIELD QUALITY CONTROL

- A. Inspections: Provide inspection of installed Work through AWI's Quality Certification Program or WI's Certified Compliance Program certifying that woodwork, including installation, complies with requirements of the ANSI/AWI Standards or Architectural Woodwork Standards for the specified grade.
 - 1. Inspection entity shall prepare and submit certificates of inspection at Closeout.

3.4 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean cabinets on exposed and semiexposed surfaces.

END OF SECTION 064116

SECTION 066400 - PLASTIC PANELING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fiber-reinforced-plastic (FRP) sheet paneling.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For plastic paneling and trim accessories, in manufacturer's standard sizes.

1.3 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain plastic paneling and trim accessories from single manufacturer.

2.2 PLASTIC SHEET PANELING

- A. Glass-Fiber-Reinforced Plastic Paneling: Gelcoat-finished, glass-fiber-reinforced plastic panels complying with ASTM D5319.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Crane Composites, Inc.
 - b. Marlite.
 - c. Nudo Products, Inc.
 - 2. Basis-of-Design Products: As indicated; refer to Finish Schedule on Drawings.

2.3 ACCESSORIES

- A. Trim Accessories: Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.
 - 1. Color: Match panels.
- B. Adhesive: As recommended by plastic paneling manufacturer.
- C. Sealant: Mildew-resistant, single-component, neutral-curing silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Section 079200 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- B. Clean substrates of substances that could impair adhesive bond, including oil, grease, dirt, and dust.
- C. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- D. Lay out paneling before installing. Locate panel joints to provide equal panels at ends of walls not less than half the width of full panels.
 - 1. Mark plumb lines on substrate at trim accessory locations for accurate installation.
 - 2. Locate trim accessories to allow clearance at panel edges according to manufacturer's written instructions.

3.3 INSTALLATION

- A. Install plastic paneling according to manufacturer's written instructions.
- B. Install panels in a full spread of adhesive.
- C. Install trim accessories with adhesive.
- D. Fill grooves in trim accessories with sealant before installing panels, and bed inside corner trim in a bead of sealant.
- E. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
- F. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
- G. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

END OF SECTION 066400

SECTION 071326 - SELF-ADHERING SHEET WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Modified bituminous sheet waterproofing.
 2. Blindsight sheet waterproofing.
 3. Molded-sheet drainage panels.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, adhesion to contaminated substrate (e.g. concrete curing compounds and form release agents), substrate curing period weather related restrictions during installation, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs. Include the following:
 - a. Before starting application of membrane waterproofing work, arrange a job-site meeting with the Architect, the Testing Agency and manufacturer representative to discuss the following:
 - 1) The waterproofing system, number of plies, termination and flashing requirements.
 - 2) Intermediate and final requirements of protecting the work.
 - 3) The different substrates that will receive the waterproofing and preparation requirements for each.
 - 4) Curing requirements for concrete.
 - 5) Concrete form release agent precautions.
 - 6) Verify admixtures and compatibility with waterproofing manufacturer.
 - 7) Adhering to coated surfaces, if applicable.
 - 8) Job specific recommendations on use of primers.
 - 9) Hot, cold and wet condition precautions.
 - 10) Scheduling and coordination with other construction, such as waterproofing overlaps that must be installed during construction of walls and footings both above and below grade.
 - 11) Protection of the work and repair procedures.
 - 12) Verify in writing to the Owner's representative, that the Contractor's full time on site foreman and crew etc. (as required) are certified, or meet the requirements of the manufacturer of the waterproofing, as installers.
 - b. Whenever the membrane waterproofing work is to be done, notify Testing Agency in sufficient time to arrange inspections.
 - c. Provide safe access to the location of the Work for proper inspection.
 - d. Post installation testing (e.g. Flood Testing or Electronic Field Vector Mapping.)

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

- C. Samples: For each exposed product and for each color and texture specified, including the following products:
 - 1. 8-by-8-inch square of waterproofing and flashing sheet.
 - 2. 4-by-4-inch square of drainage panel.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
- B. Provide the following upon request:
 - 1. Qualification Data: For Installer.
 - 2. Field quality-control reports.

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
 - 1. Do not apply waterproofing in snow, rain, fog, or mist.
- B. Maintain adequate ventilation during preparation and application of waterproofing materials.
- C. Compatibility:
 - 1. Where new work interfaces existing waterproofed construction, remove existing waterproofing as required to install new work. Interface new waterproofing with existing system to provide continuous system without leaks. Ensure compatibility of system materials.
 - 2. The waterproofing manufacturer shall submit a letter stating compatibility or concerns with existing, or adjacent, waterproofing.

1.6 WARRANTY

- A. Manufacturer's Warranty: Manufacturer's standard materials-only warranty in which manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.
- B. Blindside Sheet Waterproofing Manufacturer's Warranty: Manufacturer's material and labor warranty in which manufacturer agrees to cover labor and to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 - 1. Warranty Period: Fifteen years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations for Waterproofing System: Obtain waterproofing materials from single source from single manufacturer.

2.2 MODIFIED BITUMINOUS SHEET WATERPROOFING

- A. Modified Bituminous Sheet: Minimum 60-mil nominal thickness, self-adhering sheet consisting of 56 mils of rubberized asphalt laminated on one side to a 4-mil-thick, polyethylene-film reinforcement, and with release liner on adhesive side; formulated for application with primer that complies with VOC limits of authorities having jurisdiction.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. GCP Applied Technologies Inc.; Bituthene 4000
 2. Physical Properties:
 - a. Tensile Strength, Membrane: 250 psi minimum; ASTM D 412, Die C, modified.
 - b. Ultimate Elongation: 300 percent minimum; ASTM D 412, Die C, modified.
 - c. Low-Temperature Flexibility: Pass at minus 20 deg F; ASTM D 1970.
 - d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch movement; ASTM C 836.
 - e. Puncture Resistance: 40 lbf minimum; ASTM E 154.
 - f. Water Absorption: 0.2 percent weight-gain maximum after 48-hour immersion at 70 deg F; ASTM D 570.
 - g. Water Vapor Permeance: 0.05 perms maximum; ASTM E 96/E 96M, Water Method.
 - h. Hydrostatic-Head Resistance: 200 feet minimum; ASTM D 5385.

2.3 BLINDSIDE SHEET WATERPROOFING

- A. Adhesive-Coated HDPE Sheet for Blindside Vertical Applications: Uniform, flexible, multilayered-composite sheet membrane consisting of an HDPE film coated with a pressure-sensitive adhesive and protective release liner, total 32-mil thickness; with the following physical properties:
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. GCP Applied Technologies; Preprufe 160R Plus.
 2. Physical Properties:
 - a. Tensile Strength, Film: 4000 psi minimum; ASTM D 412.
 - b. Low-Temperature Flexibility: Pass at minus 10 deg F; ASTM D 1970.
 - c. Peel Adhesion to Concrete: 5 lbf/in. minimum; ASTM D 903, modified.
 - d. Lap Adhesion: 2.5 lbf/in. minimum; ASTM D 1876, modified.
 - e. Hydrostatic-Head Resistance: 231 feet; ASTM D 5385, modified.
 - f. Puncture Resistance: 100 lbf minimum; ASTM E 154.
 - g. Water Vapor Permeance: 0.01 perms maximum; ASTM E 96/E 96M, Water Method.
 - h. Water Absorption: 0.5 percent maximum; ASTM D 570.
- B. Adhesive-Coated HDPE Sheet for Blindside Horizontal Applications: Uniform, flexible, multilayered-composite sheet membrane consisting of an HDPE film coated with pressure-sensitive adhesive and protective release liner, total 46-mil thickness; with the following physical properties:
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. GCP Applied Technologies Inc.; Preprufe 300R Plus.
 2. Physical Properties:
 - a. Tensile Strength, Film: 4000 psi minimum; ASTM D 412.
 - b. Low-Temperature Flexibility: Pass at minus 10 deg F; ASTM D 1970.
 - c. Peel Adhesion to Concrete: 5 lbf/in. minimum; ASTM D 903, modified.
 - d. Lap Adhesion: 2.5 lbf/in. minimum; ASTM D 1876, modified.
 - e. Hydrostatic-Head Resistance: 231 feet; ASTM D 5385, modified.
 - f. Puncture Resistance: 200 lbf minimum; ASTM E 154.

- g. Water Vapor Permeance: 0.01 perms maximum; ASTM E 96/E 96M, Water Method.
- h. Water Absorption: 0.5 percent maximum; ASTM D 570.

2.4 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
 - 1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
- B. Primer: Liquid primer recommended for substrate by sheet-waterproofing material manufacturer.
 - 1. Product: GCP Adhesive Primer B2 LVC by GCP Applied Technologies.
- C. Primer for Positive-Side Modified Bituminous Sheet Membrane Vertical Application:
 - 1. Product: Bituthene Primer B2 LVC by GCP Applied Technologies.
- D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.
 - 1. Bituthene Liquid Membrane by GCP Applied Technologies.
- E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating and compatible with waterproofing assembly.
- F. Waterproofing Tape:
 - 1. Waterproofing Tape (4 in. wide): Preprufe Tape LT (for temperatures between 25 degrees F (minus 4 degrees C) and 86 degrees F (plus 30 degrees C)) and Preprufe Tape HC (for use in Hot Climates, minimum 50 degrees F).
 - 2. Construction Joint Tape (8 in. wide) for covering cut edges, roll ends, penetrations, terminations, and repairs: Preprufe CJ Tape, by GCP Applied Technologies.
 - 3. Detail Tape (2 in. wide)
- G. Sheet Strips: Self-adhering, rubberized-asphalt sheet strips of same material and thickness as sheet waterproofing.
- H. Mastic and Adhesives: Liquid mastic and adhesives recommended by waterproofing manufacturer.
 - 1. Mastic: Rubberized asphaltic mastic adhesive provided by, or as approved by, membrane manufacturer:
 - a. Product: GCP Bituthene Mastic
- I. Expansion Joints: Proprietary field fabricated expansion joints shall be used with manufacturers waterproofing or as recommended by the waterproofing manufacturer, unless stated otherwise.
- J. Metal Termination Bars:
 - 1. Termination Bar: Stainless Steel 1 inch by 8 feet, 0.075" thick, with 5/16" holes 8" to 9" on center.
 - a. Product: Advanced Building Products Inc. Stainless Steel Termination Bar, or equal.
 - 2. Expansion Anchor: 1/4" x 2" expansion anchor consisting of a Type 304 Stainless Steel drive pin and an expanding body. Basis of design: Hilti Metal HIT Anchor.
- K. Protection Course:
 - 1. Protection Board Vertical Applications: Extruded polystyrene board insulation, Type IV, 25 psi minimum compressive resistance, shiplap edged.
 - a. Products: Subject to compliance with requirements, provide the following:
 - 1) Extruded Polystyrene; Kingspan GreenGuard; Type 4 Insulation Board.

- b. Adhesive: 3M; Scotch-Weld.
- L. Reinforced Fluid Applied Flashing: Manufacturer's recommended to suit conditions.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. GCP; Bithuthene Liquid Membrane.
 - b. GCP; Preprufe Liquid Flashing
- M. Self-Adhering Stainless Steel Flexible Flashing:
 - 1. Subject to compliance with requirements, provide the following:
 - a. York Manufacturing Inc.; York 304 or 316 SA
 - 2. Characteristics:
 - a. Type: stainless steel with one stainless steel face (facing outward) with a butyl block co-polymer adhesive (inward facing).
 - b. Stainless steel: type 304 or 316, ASTM A240. Domestically sourced per DF ARS 252.225-7008 and/or DF ARS 252.225-7009.
- N. Sealants, Cleaners, Adhesives, and similar items: Provide as recommended by waterproofing membrane manufacturer.

2.5 MOLDED-SHEET DRAINAGE PANELS

- A. Type 1: Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate of 9 to 18 gpm per ft..
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. GCP Applied Technologies Inc.; Hydroduct 220 (vertical).
 - 2. Include outlet pipe connectors, connector tees, corner guards and detail tape for complete drainage assembly.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.
 - 1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D 4263.
- B. Examine membrane, with Installer present, before and after the installation of steel reinforcement. All damage should be documented and repaired prior to the installation of concrete in accordance with the manufacturer's written instruction or as modified herein.
- C. Condition of Surfaces: Surfaces to receive membrane shall be free of defects or conditions that will interfere with or prevent a satisfactory installation of waterproofing systems.

1. Provide a smooth, sound, and continuous surface. The maximum surface roughness for concrete substrates shall be equivalent to ICRI CSP 5 or smoother.
 2. Substrate can be damp but must not have any liquid water that can transfer to a dry hand upon contact.
- D. Contaminants: Surfaces shall be thoroughly cleaned and shall be free of water, dew, frost, dust, dirt, oil, grease, concrete curing compounds, laitance, and other foreign matter.
- E. Other Work: Installation of other work passing through or concealed by waterproofing shall be complete and approved before starting work of membrane installation.
- F. Do not install waterproofing in standing water.
- G. Surfaces to receive Liquid Membrane must be dry, without any appearance of dampness.
- H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrates in accordance with manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks in accordance with ASTM D 4258.
1. Install sheet strips of width in accordance with manufacturer's written instructions and center over treated construction and contraction joints and cracks.
- F. Bridge and cover isolation joints and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths in accordance with manufacturer's written instructions.
- G. Corners: Prepare, prime, and treat inside and outside corners in accordance with ASTM D 6135.
1. Install membrane strips centered over vertical inside corners. Install 3/4-inch fillets of liquid membrane on horizontal inside corners and as follows:
 - a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
- H. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions in accordance with ASTM D 6135.

3.3 MODIFIED BITUMINOUS SHEET-WATERPROOFING APPLICATION

- A. Install modified bituminous sheets in accordance with waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.

C. General

1. Application of all waterproofing systems shall be sequenced with other trades.
2. Waterproofing systems shall be installed to provide a monolithic, watertight system.
3. Comply with waterproofing manufacturer's installation instructions and product recommendations unless more stringent requirements are specified herein.
4. Sheet membrane laps shall be placed to shed water.

D. Apply and firmly adhere sheets, 100% back rolled, over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.

1. When ambient and substrate temperatures range between 25 and 40 deg F, install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F.

E. One-Ply Application: Install sheets to form a membrane with lap widths of a uniform 2-1/2-inch minimum.

1. For one ply application, install 6" wide Sheet Strips over all laps.

F. Two-Ply Application, where hydrostatic head is present, as follows:

1. Install first ply; install sheets to form a membrane with lap widths of a uniform 2-1/2-inch minimum.
2. Install second ply; install sheets to form a membrane with lap widths of a uniform 2-1/2-inch minimum.
3. Stagger seams of first ply and second ply. Do not align seams of first ply with second ply.

G. Horizontal Application: Install Two-Ply Application, apply sheets from low to high points of decks to ensure that laps shed water. Only install liquid membrane over seams to the top layer.

H. Corners: Prepare, prime, and treat positive side inside and outside corners according to ASTM D6135.

1. Apply 1 inch cant of Liquid Membrane at all inside corners.
2. Apply 6 inch wide reinforcing strip of modified bituminous sheet membrane at all inside and outside corners. Roll membrane firmly with steel hand roller.

I. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.

J. Seal edges of sheet-waterproofing terminations with mastic.

K. Install sheet-waterproofing and auxiliary materials to tie into adjacent waterproofing.

1. Terminate membrane with a termination bar, fastened 6 in. on center. Fully encapsulate the leading edge of the membrane waterproofing, termination bar, and fasteners with liquid membrane.

L. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches beyond repaired areas in all directions.

M. Immediately install protection course with butted joints over waterproofing membrane.

3.4 BLINDSIDE SHEET-WATERPROOFING APPLICATION

A. Install bonded blindside sheet waterproofing in accordance with manufacturer's written instructions.

B. Place and secure molded-sheet drainage panels over substrate. Lap edges and ends of geotextile to maintain continuity.

- C. Vertical Applications: Install sheet with face against substrate. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required by membrane manufacturer. Overlap and seal seams, and stagger and tape end laps to ensure watertight installation. Mechanically fasten to substrate.
 - 1. Securely fasten top termination of membrane with continuous metal termination bar anchored into substrate and cover with detailing tape.
- D. Horizontal Applications: Install sheet with face against substrate. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required by membrane manufacturer. Overlap and seal seams, and stagger and tape end laps to ensure watertight installation.
- E. Corners: Seal lapped terminations and cut edges of sheet waterproofing at inside and outside corners with detail tape.
- F. Seal penetrations through sheet waterproofing to provide watertight seal with detail tape patches or wraps and a liquid-membrane troweling.
- G. Install sheet-waterproofing and auxiliary materials to produce a continuous watertight tie into adjacent waterproofing.
 - 1. Do not use plastic or metal chairs to support rebar against the membrane.
- H. Penetrations, Construction Joints, and Damage:
 - 1. All penetrations shall be sealed in accordance with the manufacturer's instructions and details.
- I. Repairs: Repair tears, punctures, air blisters, excessively dirty membrane, and inadequately lapped seams, in accordance with the manufacturer's instructions, except as modified below, before the concrete is poured.

3.5 MOLDED-SHEET DRAINAGE-PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, in accordance with manufacturer's written instructions. Use adhesives or other methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. For vertical applications, install protection course before installing drainage panels.
- B. When the vertical drainage panel is installed, the flange should be facing the direction opposite of the perimeter drain panel water flow. When the drainage panel is installed horizontally, the edge of the core with the flange should be at the top. This flange position, similar to roof shingle applications, shall minimize seepage of water behind the drain. Fold back the fabric at the top of the perimeter drainage panel and place the vertical drainage panel on top of the perimeter drainage panel core flange. Fold fabric from sheet drain section down over the perimeter drainage panel section and secure with 3 in. tape.
- C. Continue installing additional rolls of drainage panels as instructed by manufacturer.
- D. Seal all edges. Edges of drainage panels shall have extra fabric tucked behind core edge seal to prevent soil from entering core.
- E. Soil should be placed and compacted directly against the drain. Use care during backfill operation to avoid damage to the waterproofing system. Follow generally accepted practices for backfill compacted in 6 inch to 12 inch lifts to avoid stresses on the waterproofing system. Direct compactor exhaust away from the drain to prevent damage. Backfill to a minimum of 6 inches above drain to allow for coverage after settlement.

3.6 FIELD QUALITY CONTROL

- A. Site Representative: Engage a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish daily reports to Architect.
- B. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, waterproofing application, protection, and drainage components, and to furnish reports to Architect.
- C. Post Installation Testing: All waterproofed surfaces.
 - 1. Electric Field Vector Mapping (EFVM): EFVM technician shall survey entire waterproofing area for potential leaks using EFVM.
 - a. Install a temporary leak detection system by one of the following or approved equal:
 - 1) International Leak Detection, Ltd, Ontario, Canada.
 - 2) Honza Group Incorporated, Columbia, Maryland.
 - b. Engage a company experienced in detecting breaches in the waterproofing using an electronic detection system.
 - c. If breaches are discovered, repair the breach and retest the affected area. Repeat this process until no breach is detected.
 - 2. Engage an independent testing agency to observe testing. If breaches are discovered, the independent testing agency shall observe repairs and retesting of discovered breaches.
 - 3. Prepare test reports upon completion of flood testing. Submit to Architect upon request.

3.7 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed insulation from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. When waterproofing materials are subjected to damage by sunlight and cannot be immediately protected as specified, protect the waterproofing materials by waterproof building paper or suitable coating recommended by the manufacturer of the waterproofing system used.
- E. Rejection of Damaged Work:
 - 1. Damaged materials or work will be rejected.
 - 2. Rejected materials or work must be immediately removed and replaced with new materials.
 - 3. Repairs or replacement of damaged work shall be provided at no added costs to the owner.
- F. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- G. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 071800 - TRAFFIC COATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes preparation of substrates and application of traffic coatings for the following applications:
 - 1. Pedestrian traffic on exterior stairs (CONC-#).
- B. Related Requirements:
 - 1. Section 096723 "Resinous Flooring" for fluid-applied, interior, decorative resinous flooring with integral wearing surface.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site. Notify participants at least 5 working days before conference.
 - 1. Prior to commencement of the fluid application waterproofing system, meet at the site with a representative of the coating manufacturer, Contractor, Architect, District representative, and other parties affected by this Section.
 - 2. Review methods and procedures related to pedestrian traffic coating system installation, including Contract Documents and manufacturer's written instructions.
 - 3. Examine deck substrate conditions and finishes for compliance with requirements.
 - 4. Review loading limitations of deck.
 - 5. Review flashings, special details, deck drainage, penetrations, curbs, and condition of other construction that will affect pedestrian traffic coating.
 - 6. Review governing regulations and requirements for insurance, certifications, and inspection and testing, if applicable.
 - 7. Review temporary protection requirements for pedestrian traffic coating system during and after installation.
 - 8. Review protection for building residents and property.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, including installation instructions.
- B. Shop Drawings: For traffic coatings.
 - 1. Include details for treating substrate joints and cracks, flashings, deck penetrations, and other termination conditions.
 - 2. Include plans showing layout of pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.
- C. Samples for Initial Selection: For each type of exposed finish; manufacturer's standard size chips.
- D. Samples for Verification: For each exposed product and each type of exposed finish, for each color and texture selected, prepared on rigid backing.
 - 1. Provide stepped Samples on backing to illustrate buildup of traffic coatings.

1.4 INFORMATIONAL SUBMITTALS

- A. Certification: Submit current "Qualified Applicator" certificate from the manufacturer.
- B. Sample Warranties: Sample copies of manufacturer and Contractor warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For traffic coatings to include in maintenance manuals.
- B. Final coating warranties.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer to perform Work of this Section who has specialized in installing pedestrian traffic coatings similar to that required for this Project; who is approved, authorized, or licensed by the system manufacturer to install manufacturer's product; and who is eligible to receive the standard manufacturer's warranty.
- B. Primary waterproofing materials shall be products of a single manufacturer. Secondary materials shall be recommended by the primary manufacturer. Manufacturer shall have a minimum of 10 years experience in the manufacture of materials of this type.
- C. Applicators shall have a minimum of 5 years experience in the application of waterproofing materials of the type specified. Applicator shall possess a current "Qualified Applicator" certificate from the specified waterproofing manufacturer.
- D. Provide the following upon request:
 - 1. Qualification Data: For Installer.
 - 2. Product Certificates: For each type of traffic coating.
 - 3. Field-quality control test and inspection reports.
- E. Mockups: Build mockups to verify selections made under submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation..
 - 1. Build mockup for each traffic coating and substrate to receive traffic coatings.
 - 2. Size: Provide a minimum of two standalone stair treads of same size as permanent treads to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship.
 - 3. Perform slip-resistance testing on mockup according to requirements in Field Quality Control Article. If flooring does not pass testing, remediate according to resinous flooring manufacturer's instructions until floors pass testing. Apply remediation procedures to final installation.
 - 4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Apply traffic coatings within the range of ambient and substrate temperatures recommended in writing by manufacturer. Do not apply traffic coatings to damp or wet substrates, when temperatures are below 40 deg F, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F above dew point.
 - 1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.
- B. Do not install traffic coating until items that penetrate membrane have been installed.

1.8 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace and compensate for labor for failures in traffic coating materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:

- a. Adhesive or cohesive failures.
 - b. Abrasion or tearing failures.
 - c. Surface crazing or spalling.
 - d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
2. Warranty Period: 10 years from date of Substantial Completion.
- B. Installer's Warranty: Installer agrees to repair or replace traffic coating at no cost to the District for failures due to workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Adhesive or cohesive failures.
 - b. Abrasion or tearing failures.
 - c. Surface crazing or spalling.
 - d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
 2. Warranty Period: 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Dynamic Coefficient of Friction: Provide resinous flooring with dynamic coefficient of friction indicated as determined by testing identical products per ANSI A137.1/A326.3 DCOF AcuTest procedure.
1. Dynamic Coefficient of Friction (DCOF):
 - a. Stairs, intermittent/slippery wet: Not less than 0.50 wet.

2.2 MATERIALS, GENERAL

- A. Material Compatibility: Provide primers; base-, intermediate-, and topcoat; and accessory materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- B. Source Limitations:
1. Obtain traffic coatings from single source from single manufacturer.
 2. Obtain primary traffic-coating materials, including primers, from traffic-coating manufacturer. Obtain accessory materials including aggregates, sheet flashings, joint sealants, and substrate repair materials of types and from sources recommended in writing by primary material manufacturer.
- C. Traffic Coating: Manufacturer's standard, traffic-bearing, seamless, high-solids-content, cold liquid-applied, elastomeric, waterproofing membrane system with integral wearing surface for concrete substrates according to ASTM C 957.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.
 - b. Dudick Inc.
 - c. Gaco Western.
 - d. Key Resin Company.
 - e. Neogard.
 - f. Pacific Polymers; ITW Polymers Sealants North America.
 - g. Tremco Incorporated.

2.3 TRAFFIC COATING (CONC-2)

- A. Material: Urethane, for application indicated.

- B. Use and Application: Pedestrian, exterior; for use on stair treads.
- C. Preparatory and Base Coats: Apply base coat per manufacturer's written instructions.
 - 1. Thickness: Minimum dry film thickness 20 mils.
- D. Wear/Top Coat: Apply wear/top coat per manufacturer's written instructions (liquid membrane and aggregate) and back roll to encapsulate aggregate into liquid membrane.
 - 1. Thickness: Minimum dry film thickness 12 mils, measured excluding aggregate.
 - 2. Color: As selected by Architect from manufacturer's full range.
 - 3. UV inhibitors: Use UV inhibitors when traffic coating is exposed to direct sunlight, as recommended by the traffic coating manufacturer.
- E. Aggregate: Manufacturer's standard aggregate for each use indicated of particle sizes, shape, and minimum hardness recommended in writing by traffic coating manufacturer.

2.4 MATERIAL PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Provide traffic-coating materials with the fire-test-response characteristics as determined by testing identical products per test method below for deck type and slopes indicated by an independent testing and inspecting agency that is acceptable to authorities having jurisdiction.
 - 1. Class A roof covering per ASTM E 108 or UL 790.
- B. VOC Content 100 g/L or less.
 - 1. Low-Emitting Materials: Verify interior coatings comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.5 ACCESSORY MATERIALS

- A. Primer: Liquid waterborne solvent-borne primer recommended for substrate and conditions by traffic-coating manufacturer.
- B. Joint Sealants: As specified in Section 079200 "Joint Sealants."
- C. Sheet Flashing: Nonstaining sheet material recommended in writing by traffic-coating manufacturer.
- D. Adhesive: Contact adhesive recommended in writing by traffic-coating manufacturer.
- E. Reinforcing Strip: Fiberglass or polyester fabric mesh recommended in writing by traffic-coating manufacturer.
- F. Sealers: Material recommended in writing by traffic-coating manufacturer.
- G. Slip-Resistant granules: Granule: Hard (90 Rockwell Scale) non-crushable, non-extractable, organic granule with a specific gravity of 1.3 and size of 18/40 or other micromedia as recommended by coating manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for surface smoothness, surface moisture, and other conditions affecting performance of traffic-coating work.
- B. Verify that substrates are visibly dry and free of moisture.
 - 1. Moisture Testing: Test for moisture content by method recommended in writing by traffic-coating manufacturer. At a minimum, do not apply primer or coating until concrete stair treads meet one of the following minimum requirements as instructed by traffic-coating manufacturer:
 - a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Relative Humidity Test: Using in-situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 - 2. If water moisture tests exceed stated limits, apply vapor retarder for moisture vapor emission control as specified in Section 090561.13.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of traffic-coating work.
- D. Proceed with installation only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.
 - 1. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by traffic-coating manufacturer has passed and after substrates are dry, but not less than 28 days after initial pour.
 - 2. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. General: Before applying traffic coatings, clean and prepare substrates in accordance with ASTM C 1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for traffic-coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by traffic-coating manufacturer.
- B. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.
- C. Mask adjoining surfaces not receiving traffic coatings to prevent overspray, spillage, leaking, and migration of coatings. Prevent traffic-coating materials from entering deck substrate penetrations and clogging weep holes and drains.
- D. Concrete Substrates: Mechanically abrade surface to a uniform profile acceptable to manufacturer, in accordance with ASTM D 4259. Do not acid etch.
 - 1. Remove grease, oil, paints, and other penetrating contaminants from concrete.
 - 2. Remove concrete fins, ridges, and other projections.
 - 3. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.
 - 4. Remove remaining loose material to provide a sound surface, and clean surfaces in accordance with ASTM D 4258.

- E. Concrete shall have hardened sufficiently to prevent excess fine material from working to the surface prior to finishing. Concrete substrates shall have a slightly sand-textured surface. The end result shall be neither slick nor burnished, nor shall contain voids or rock pockets.

3.3 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions and recommendations.
- B. Coordinate with the manufacturer and provide the Work required by the manufacturer for the specified warranty.

3.4 TERMINATIONS AND PENETRATIONS

- A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves in accordance with ASTM C 1127 and manufacturer's written instructions.
- B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.
- C. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.
- D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates in accordance with manufacturer's written recommendations.

3.5 JOINT AND CRACK TREATMENT

- A. Prepare, treat, rout, and fill joints and cracks in substrates in accordance with ASTM C 1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks in accordance with ASTM D 4258.
 - 1. Comply with recommendations in ASTM C 1193 for joint-sealant installation.
- B. Apply reinforcing strip in traffic-coating system where recommended in writing by traffic-coating manufacturer.

3.6 TRAFFIC-COATING APPLICATION

- A. Apply traffic coating in accordance with ASTM C 1127 and manufacturer's written instructions.
- B. Apply the specified compositions for each type of traffic coating at locations as indicated on Drawings.
- C. Start traffic-coating application in presence of manufacturer's technical representative.
- D. Verify that wet film thickness of each coat complies with requirements every 100 sq. ft..
- E. Apply primer, flashing and reinforcing strips in accordance with manufacturer's written instructions
- F. Uniformly broadcast aggregate on coats specified to receive aggregate. Embed aggregate per system type and in accordance with manufacturer's written instructions.
- G. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces where traffic coating terminates beyond four inches up the wall.
- H. Cure traffic coatings. Prevent contamination and damage during application and curing stages.
- I. Apply sealers and slip-resistant granules according to manufacturer's instructions.

3.7 FIELD QUALITY CONTROL

- A. Slip Resistance: Engage special testing agency to perform the following tests.
1. Dynamic Coefficient of Friction (DCOF): A reading of not less than indicated for each wet/dry area indicated in Performance Requirements above shall be achieved and documented, as determined by a certified NFSI walkway auditor using the ANSI A137.1/A326.3 quality control test using a recognized tribometer.
 - a. Test mockup and once for each three stair treads.
- B. Final Traffic-Coating Inspection: Arrange for traffic-coating manufacturer's technical personnel to inspect membrane installation on completion.
1. Notify Architect or Owner 48 hours in advance of date and time of inspection.
- C. Field-Adhesion Testing: Perform field pull testing on traffic coating adhesion to substrates as follows:
1. Extent of Testing: Test completed and cured cold fluid-applied waterproofing as follows:
 - a. Perform tests so installation follows directly after pull tests. Tests require overnight cure time.
 - b. Perform 2 tests for each location and each substrate.
 - c. Perform tests where and as required by the waterproofing consultant or manufacturer.
 - d. Retest if there are weather variations that affect installation of waterproofing.
 2. Test Method:
 - a. Prepare substrates as intended for project-specific waterproofing installation at each test location. Install primer and sealer on substrates indicated to receive primer and sealer. Allow primer and sealer to cure. Perform pull test after primer and sealer has cured. Perform another pull test 24 hours after initial pull test.
 - b. Apply cold fluid-applied waterproofing to specified mil thickness with half of 4 inch x 12 inch transition reinforcing fabric fully embedded in waterproofing membrane so 4 inches x 6 inches of reinforcing fabric is not embedded in the waterproofing membrane. Allow cold fluid-applied waterproofing to cure.
 - c. Pull reinforcement 90 degrees from plane of installed waterproofing. Pull slowly, trying not to tear reinforcement.
 3. Inspect tested waterproofing and report on the following:
 - a. Temperature, humidity and other weather conditions that affect installation of the waterproofing
 - b. Whether coating dimensions and configurations comply with specified requirements.
 - c. Whether coating connected to pulled-out portion failed to adhere to substrates or tore cohesively. Compare these results to determine if adhesion passes manufacturer's field-adhesion hand-pull test criteria.
 4. Record test results in a field-adhesion-test log. Include dates when coating was installed, names of persons who installed the products, test dates, test locations, whether substrate was primed, adhesion results and installation dimensions.
 5. Remove coating from substrate following pull tests. Ensure that original surfaces are clean.
 6. Coordinate pull tests with Architect, and District. Notify all parties 48 hours in advance of pull tests.
- D. Evaluation of Field-Adhesion Test Results: Traffic coatings that fails cohesively within itself, not evidencing adhesive failure from testing or noncompliance with other indicated requirements and meets manufacturer's requirements will be considered satisfactory. Remove waterproofing that fails to adhere to substrates during testing or to comply with other requirements. Retest failed applications until test results prove waterproofing complies with indicated requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports. Submit to Architect upon request.

3.8 PROTECTING AND CLEANING

- A. Protect traffic coatings from damage and wear during remainder of construction period.

- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 072100 - THERMAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Polyisocyanurate foam-plastic board insulation.
 - 2. Glass-fiber blanket insulation.
 - 3. Mineral-wool batt/blanket insulation.
 - 4. Insulation fasteners and accessories.

- B. Related Requirements:
 - 1. Section 075419 "Polyvinyl-Chloride (PVC) Roofing" for insulation specified as part of roofing construction.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
 - 1. Sign, date, and post the certification in a conspicuous location on Project site.

- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

- C. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to the Project site in their original containers or packages or bundles bearing label clearly identifying manufacturer's name, brand, grade, UL listing, and other pertinent information.

- B. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

PART 2 - PRODUCTS

2.1 POLYISOCYANURATE FOAM-PLASTIC BOARD INSULATION

- A. Foil-Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I, Class 1 or Class 2; thickness and width indicated and manufacturer's standard length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84 manufactured with non-halogenated fire-retardants.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Roofing Corporation.
 - b. Carlisle Coatings & Waterproofing Inc.
 - c. DuPont.

- d. Firestone Building Products.
 - e. Hunter Panels.
 - f. Johns Manville.
 - g. Rmax, Inc.
2. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.

2.2 MINERAL-WOOL BATT/BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Fibrex Insulations Inc.
 2. Johns Manville.
 3. Rockwool International.
 4. Thermafiber.
- B. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 1. Minimum density of 0.6 lbs. per cubic foot.
 2. Minimum thermal resistivity (R) of 3.1deg F x h x sq. ft./Btu x in. at mean temperature of 75 degrees F.
 3. Thermal Resistance: Of total thickness required to provide a minimum thermal resistance of R4.3 per inch (deg. F.h.sf/Btu).
 4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.3 GLASS-FIBER BATT/BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. CertainTeed Corporation.
 2. Johns Manville.
 3. Knauf Insulation.
 4. Owens Corning.
- B. Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 1. Thermal Resistance: Refer to Drawings for total thermal resistance of exterior walls..
 2. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.4 INSULATION FASTENERS

- A. Mechanically Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
 - b. Gemco; Spindle Type.
 2. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.

- B. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
 - b. Gemco; Spindle Type.
 2. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch diameter; length to suit depth of insulation indicated.
- C. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Gemco; 90-Degree Insulation Hangers.
 2. Angle: Formed from 0.030-inch-thick, perforated, galvanized carbon-steel sheet with each leg 2 inches square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch diameter; length to suit depth of insulation indicated.
- D. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches square or in diameter.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. AGM Industries, Inc.; RC150.
 - b. Gemco; Dome-Cap R-150.
 2. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
 - a. Crawl spaces.
 - b. Ceiling plenums.
 - c. Attic spaces.
 - d. Where indicated.
- E. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of 1 inch 2 inches 3 inches between face of insulation and substrate to which anchor is attached.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Gemco; Clutch Clip.
- F. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, air barrier, fasteners, and substrates. When in contact with air barrier, provide adhesive and chemical compatible material that is acceptable by the air barrier manufacturer.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. AGM Industries, Inc.
 - b. Gemco.
 2. Adhesion Strength: 15 lbf/sq. in. minimum.

2.5 ACCESSORIES

- A. Insulation for Miscellaneous Voids:
 - 1. Unfaced, Mineral-Wool Blanket Insulation.
 - 2. Spray Polyurethane Foam Insulation: ASTM C1029, Type II, closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.
- B. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.
 - 1. Adhesives shall have a VOC content of 70 g/L or less.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean substrates of substances that are harmful to insulation or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Install insulation with manufacturer's R-value label exposed after insulation is installed.
- D. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- E. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF CONTINUOUS BOARD INSULATION

- A. Polyisocyanurate Board Insulation: Friction fit insulation between Z-girts and other subframing components, and mechanically attach impaling pin through exterior sheathing into steel stud or adhere to substrate with daubs of adhesive spaced approximately 12 inches on center. Fit insulation with edges butted tightly in both directions. Fit insulation tightly around cladding attachments and other obstructions. Space impaling pins per manufacturer to resist the weight of the insulation board and wind load; press units onto impaling pins and set firmly against exterior surface of wall and install locking washer onto impaling pin.
 - 1. Butter all edges of insulation board with adhesive or fill joints with spray foam sealant.
 - 2. Fill all voids with spray foam sealant.
- B. Ensure insulation is tightly fitted with sides of insulation slightly compressed at each insulation spacer. Ensure insulation pieces are in contact with no linear gaps between girts or other subframing. Install system to fill-in exterior spaces without gaps or voids. Do not compress insulation panels.
- C. Trim insulation neatly to fit spaces, and insulate miscellaneous gaps and voids.

- D. Fit insulation with edges butted tightly. Fit insulation tightly between thermal spacers and around cladding attachments, penetrations, and other obstructions. Fill voids with spray-applied polyurethane foam sealant.
- E. Ensure and verify permanent retention of continuous insulation prior to installing exterior cladding systems.

3.4 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

- A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
- B. Glass-Fiber Batt/Blanket Insulation: Install in cavities formed by framing members in accordance with the following requirements:
 - 1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 - 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members and/or building construction with no gaps or voids.
 - 3. Secure insulation blankets to framing members with fasteners as recommended by the insulation manufacturer.
 - 4. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 - 5. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 - a. Provide galvanized metal furring or metal bands or wire lacing as required to hold insulation blankets in place without sagging.
- C. Mineral-Wool Batt/Blanket Insulation: Install in cavities formed by framing members in accordance with the following requirements:
 - 1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 - 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members and/or building construction with no gaps or voids.
 - 3. Secure insulation blankets to framing members with fasteners as recommended by the insulation manufacturer.
 - 4. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 - 5. Attics: Install eave ventilation troughs between roof framing members in insulated attic spaces at vented eaves.
 - 6. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 - a. Provide galvanized metal furring or metal bands or wire lacing as required to hold insulation blankets in place without sagging.
- D. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.
- E. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials, matching adjacent insulation type where possible:
 - 1. Unfaced glass-fiber blanket insulation. ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 - 2. Spray Polyurethane Insulation: Apply in accordance with manufacturer's written instructions.

3.5 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
- B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 072713 - MODIFIED BITUMINOUS SHEET AIR BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes self-adhering, vapor-retarding, modified bituminous sheet air barriers if required for patching and repairing to match existing exterior assemblies.
- B. Related Requirements:
 - 1. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
 - 2. Section 072726 "Fluid-Applied Membrane Air Barriers" for air barriers used in new construction and if required for matching existing assemblies.

1.2 DEFINITIONS

- A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
 - 1. Submit letter from primary materials manufacturer indicating approval of products not manufactured by primary manufacturer.
 - 2. Include certification statement from air-barrier manufacturer, certifying permanent chemical and adhesive compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier, and certifying that cleaning materials used during installation are chemically compatible with each of the adjacent materials proposed for use.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. A qualified firm that is approved, authorized, or licensed by the manufacturer to install manufacturer's product, that is eligible to receive manufacturer's special warranty, and is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
- B. Submit the following upon request:
 - 1. Qualification Data: For Installer.

- a. Provide evidence from the manufacturer that the firm is approved, authorized, or licensed to install the specified products and is eligible to receive manufacturer's special warranty.
 - b. Provide evidence that the installing firm is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
2. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.
 1. Protect substrates from environmental conditions that affect air-barrier performance.
 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.8 WARRANTY

- A. Manufacturer's Warranty: Provide manufacturer's standard product warranty, for a minimum 10 years from date of Substantial Completion.
- B. Special Installer's Warranty: Provide air barrier installer's 2 year warranty from date of Substantial Completion, including all components of the air barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
- B. VOC Content: 250 g/L or less when calculated in accordance with 40 CFR 59, Subpart D (EPA Method 24) and complying with VOC content limits of authorities having jurisdiction.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Air barrier shall be capable of performing as a continuous vapor-retarding air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing and/or dampproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft., when tested in accordance with ASTM E 2357.

- C. Provide an air barrier assembly that withstands combined positive and negative design wind, fan and stack pressures on the envelope without damage or displacement, that transfers the load to the structure, and that does not displace adjacent materials under full load. Join air barrier system materials in an airtight and flexible manner to adjacent assemblies, allowing for the relative movement of assemblies due to thermal and moisture variations and creep, and anticipated seismic movement.

2.3 SELF-ADHERING SHEET AIR BARRIER

- A. Modified Bituminous Sheet: 40-mil- thick, self-adhering sheet consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick, cross-laminated polyethylene film with release liner on adhesive side and formulated for application with primer that complies with VOC limits of authorities having jurisdiction.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. GCP Applied Technologies Inc.; Perm-A-Barrier Wall Membrane.
 - b. Henry Company; Blueskin SA.
 - c. Tremco Incorporated, an RPM company; ExoAir 110.
 2. Physical and Performance Properties:
 - a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E 2178.
 - b. Tensile Strength: Minimum 250 psi; ASTM D 412, Die C.
 - c. Ultimate Elongation: Minimum 200 percent; ASTM D 412, Die C.
 - d. Puncture Resistance: Minimum 40 lbf; ASTM E 154.
 - e. Water Absorption: Maximum 0.15 percent weight gain after 48-hour immersion at 70 deg F; ASTM D 570.
 - f. Vapor Permeance: Maximum 0.05 perm; ASTM E 96/E 96M, Water Method.

2.4 ACCESSORY MATERIALS

- A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier membrane.
- B. Primer: Liquid primer recommended for substrate by air-barrier material manufacturer.
- C. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
- D. Transition Membrane: Between Air Barrier Membrane and Other Adjacent Materials: Comply with both air barrier manufacturer's recommendations and adjacent material manufacturer's recommendations.
1. Liquid Flashing: Manufacturer's standard trowel grade liquid flashing.
 - a. Joint Reinforcing Strip: Air-barrier manufacturer's glass-fiber-mesh tape.
 2. Butyl Strip: 30 to 40 mils thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive with release liner backing.
 3. High Temperature Modified Bituminous Strip: 40 mils thick, smooth surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick polyethylene film with release liner backing.
 - a. For use under metal copings and flashings directly exposed to the exterior.
 4. Foil Faced Modified Bituminous Strip: 40 mils thick, smooth surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick polyethylene film with release liner backing.
 5. Modified Bituminous Strip: 40 mils thick, smooth surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick polyethylene film with release liner backing.
 6. Adhesive-Coated Transition Strip: Vapor-permeable, 17-mil- thick, self-adhering strip consisting of an adhesive coating over a permeable laminate with a permeance value of 37 perms.
 7. Elastomeric Flashing Sheet: ASTM D 2000, 2BC415 to 3BC620, minimum 50- to 65-mil- thick, cured sheet neoprene with manufacturer-recommended contact adhesives and lap sealant with stainless-steel termination bars and fasteners.

8. Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.
 - a. Dow Corning Corporation; Silicone Transition Strip System.
 - b. Momentive Performance Materials Inc.; US11000 UltraSpan.
 - c. Tremco Incorporated; Proglaze ETA Connections.
9. Self-Adhering Stainless Steel Flexible Flashing:
 - a. Subject to compliance with requirements, provide the following:
 - 1) York Manufacturing Inc.; York 304 SA.
 - b. Characteristics:
 - 1) Type: Stainless steel with one stainless steel face (facing outwards) with a butyl block co-polymer adhesive (inward facing).
 - 2) Stainless Steel: Type 304, ASTM A240. Domestically sourced per DF ARS 252.225-7008 and/or DF ARS 252.225-7009.
- E. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.
- F. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, 0.0187 inch thick, and Series 300 stainless-steel fasteners.
- G. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, 1.5- to 2.0-lb/cu. ft. density; flame-spread index of 25 or less in accordance with ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
- H. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 079200 "Joint Sealants."
- I. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine existing substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 2. Verify that existing concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method in accordance with ASTM D 4263 or as required by the sheet air barrier manufacturer to verify concrete is acceptable for installation of air barrier.
- B. Manufacturer's Field Services: Engage manufacturer's qualified technical representative to review substrates prior to installation of sheet air barrier patches to determine compliance with requirements. Perform adhesion tests as needed to ensure compliance. Manufacturer shall submit certification of substrate inspection along with any preparation or remediation requirements to produce sound substrate for adhesion.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrate in accordance with manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.

- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from existing concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in existing concrete with substrate-patching membrane.
- E. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- F. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.
- G. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks in accordance with ASTM D 4258.
 - 1. Install modified bituminous strips and center over treated construction and contraction joints and cracks exceeding a width of 1/16 inch.
- H. Bridge and cover isolation joints discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with overlapping transition membranes.

3.3 TRANSITION MEMBRANE INSTALLATION

- A. General: Install transition membrane and accessory materials in accordance with air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 - 1. Coordinate the installation of air barrier with installation of roofing membrane, below grade waterproofing, and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install manufacturer's recommended transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- C. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials as recommended by manufacturer.
- D. At end of each working day, seal top edge of transition membrane to substrate with termination mastic.
- E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition membrane so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames with not less than 1 inch of full contact.
 - 1. Modified Bituminous Transition Strip: Roll firmly to enhance adhesion.

2. Adhesive-Coated Transition Strip: Roll firmly to enhance adhesion.
 3. Elastomeric Flashing Sheet: Apply adhesive to wall, frame, and flashing sheet. Install flashing sheet and termination bars, fastened at 6 inches o.c. Apply lap sealant over exposed edges and on cavity side of flashing sheet.
 4. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.
- G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- H. Seal transition membrane around masonry reinforcing or ties and penetrations with termination mastic.
- I. Seal top of through-wall flashings to air barrier with an additional 6-inch- wide, transition membrane.
- J. Seal exposed edges of transition membrane at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- K. Repair punctures, voids, and deficient lapped seams in transition membrane. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.4 SELF-ADHERING SHEET AIR BARRIER INSTALLATION

- A. General: Install modified bituminous sheets and accessory materials in accordance with air-barrier manufacturer's written instructions and in accordance with recommendations in ASTM D 6135. Apply only when patching and repairing existing compatible sheet air barriers.
1. When ambient and substrate temperatures , install self-adhering, modified bituminous air-barrier sheet produced for low-temperature application. Do not install low-temperature sheet if ambient or substrate temperature is higher than .
- B. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.5 CLEANING AND PROTECTION

- A. Protect air-barrier system from damage during application and remainder of construction period, in accordance with manufacturer's written instructions.
1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for longer than allowed by manufacturer, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane in accordance with air-barrier manufacturer's written instructions.
 2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- B. Clean spills, stains, and soiling from construction that would be exposed in the completed Work, using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 072726 - FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes fluid-applied, vapor-permeable membrane air barriers including all components for a complete weather-resistant installation, that incorporates the ABAA Quality Assurance Program (QAP).
 - 1. Work includes furnishing and installation of materials to bridge and seal air and water leakage pathways where installed including, but not limited to, roof and foundation junctions, window and door openings, control and expansion joints, piping and other penetrations through the wall assembly.
- B. Related Requirements:
 - 1. Section 061600 "Sheathing" for wall sheathings.
 - 2. Section 079200 "Joint Sealants;" for procedural, administrative, product and execution requirements for sealants specified in this Section.

1.2 DEFINITIONS

- A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.
- D. Weather Barrier: The term weather barrier shall be used interchangeably with fluid-applied water/air barrier including all components.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Include installers of other construction connecting to air barrier, including roofing, dampproofing, sealants, , storefronts, and door frames.
 - 2. Review air barrier requirements including surface preparation, substrate condition and pretreatment, minimum substrate curing period, forecasted weather conditions, special details and sheet flashings, mockups, installation procedures, sequence of installation, testing and inspecting procedures, materials approved for use, compatibility of materials, coordination with installation of adjacent and covering materials, and protection and repairs.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of air barrier.
 - 1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
 - 2. Submit letter from primary materials manufacturer indicating approval of products not manufactured by primary manufacturer.
 - 3. Include statement that materials are compatible with adjacent materials proposed for use and the following.

- a. For materials that the air barrier system will bond to, provide letters as necessary from each manufacturer confirming materials and substrates for the air barrier system is chemically and adhesively compatible with the air barrier system and the bonded to material.
 - b. For materials that are proposed to bond to the air barrier system, provide letters as necessary from each manufacturer confirming materials proposed to bond to the air barrier system are chemically and adhesively compatible with the air barrier system.
4. Submit reports indicating that field peel-adhesion test on all materials to which sealants are adhered have been performed and the changes made, if required, to other approved materials, in order to achieve successful adhesion.

B. Shop Drawings: For air-barrier assemblies.

1. Show locations and extent of air barrier. Include project specific details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
2. Indicate total area (sq. ft.) of air barrier to be installed.
3. Include project specific details of interfaces with other materials that form part of the air barrier.
4. Include letter from manufacturer indicating that the project specific details and shop drawings have been reviewed and are approved for use.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer. Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project and the following:

1. Provide evidence from the manufacturer that the firm is approved, authorized, or licensed to install the specified products and is eligible to receive manufacturer's special warranty.
2. Provide evidence that the installing firm is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
3. Provide a manual that describes Installers and Manufacturers Quality Assurance / Quality Control program and procedures.
4. Sample of Installers Daily Work Sheet.

B. Product Certificates: From air-barrier manufacturer, certifying permanent chemical and adhesive compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier, and certifying that cleaning materials used during installation are chemically compatible with each of the adjacent materials proposed for use.

C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

D. Evaluation Reports: Manufacturer's ICC evaluation report confirming compliance with the CBC and IECC as an air barrier and water-resistive barrier.

E. Sample Warranty: Sample each type of warranty from Manufacturer and Installer.

F. Installation Reports: Provide Installer Daily Worksheet for project record. Provide reports weekly to Architect for each week installation of air barrier system occurs.

G. Field Test Results: Submit mockup and in-situ test results of air leakage test and water leakage test with specified standards, including retesting if initial results are not satisfactory.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer shall have minimum 5 years of local application experience with specified weather barriers or similar installations.

2. Employ skilled mechanics who are experienced and knowledgeable in waterproofing and air barrier application, and familiar with the requirements of the specified work.
 3. A qualified firm that is approved, authorized, or licensed by the manufacturer to install manufacturer's product, that is eligible to receive manufacturer's special warranty, and is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
 4. A firm that is an ABAA-licensed contractor and employs certified and registered installers.
 5. A firm that complies with ABAA's Quality Assurance Program.
 6. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.
- B. **Manufacturer Qualifications:** A qualified manufacturer of exterior air barrier membrane and component materials for a minimum of 10 years in North America regularly engaged in manufacturing air barrier membranes.
- C. **Mockups:** Before beginning installation of air barrier, build first-in-place mockups to set quality standards for materials and execution and for preconstruction testing.
1. Build mockups of exterior wall assembly , 150 sq. ft., incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection by District's testing agency of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing vapor retarder, building corner condition, and below-grade waterproofing where applicable.
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

- A. **Preconstruction Testing Service:** District will engage a qualified testing agency to perform preconstruction testing on field mockups.
- B. **Mockup Testing:** Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
1. **Water Spray Test:** Areas designated by the Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 - a. Perform tests at transitions to adjacent exterior enclosure assemblies, deflection joints, and expansion joints.
 - b. Perform tests at a representative sample of each condition.
 - c. **Water Penetration Failure Criteria:**
 - 1) Water leakage to the interior of the building is a failure.
 - 2) Water observed on interior surfaces of the system is a failure.
 - 3) Water observed on interior surfaces of adjacent systems, originating from the wall system or the transition to the adjacent systems, is a failure.
 - d. Provide an inspection report that indicates results.
 2. **Adhesion Testing:** Mockups will be tested for minimum air-barrier adhesion of 16 lbf/sq. in. or to manufacturer's minimum adhesion level per substrates, whichever is greater, according to ABAA T0002. Perform test after curing period recommended by the manufacturer. Record mode of failure and area which failed in accordance with referenced standard.

- a. Test Locations: Perform 1 test per substrate type. (Each test site includes 3 pull tests)
 - b. Provide an inspection report that indicates results.
3. Wet Film Thickness Test (to be performed by installer at time of installation and included on ABAA QAP daily worksheet):
- a. Test material using wet film gauge to confirm that membrane meets manufacturer's indicated wet film thickness requirements.
 - b. Minimum one per coat per substrate type.
 - c. Failure Criteria:
 - 1) A measurement less than manufacturer's required wet film thickness is considered a failure.
 - d. Provide an inspection report indicating results and include photo documentation.
4. Dry Film Thickness Test:
- a. Test material in accordance with manufacturer's requirements to confirm that cured membrane meets manufacturer's indicated dry film thickness requirements.
 - b. Three 1 inch x 4 inch samples removed from separate areas with gypsum facer intact to avoid stretching membrane.
 - c. Failure Criteria:
 - 1) A measurement less than manufacturer's required dry film thickness is considered a failure.
 - d. Provide an inspection report indicating results and include photo documentation.
5. Air barriers will be considered defective if they do not pass tests and inspections.
- a. Wet Film Thickness: Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
 - b. Upon failure of Dry Film Testing or Adhesion Testing:
 - 1) Determine cause of failure.
 - 2) Provide one additional test for each occurrence of failure on the mockup.
 - 3) Repair deficient air barrier components per manufacturer's recommendations.
 - 4) Repair tested areas per manufacturer's recommendations.
 - c. Upon failure of water spray testing:
 - 1) Determine cause of failure.
 - 2) Repair per manufacturer's recommendations and retest deficient air barrier components.
6. Notify Architect 14 days in advance of the dates and times when mockups will be tested.
7. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
8. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in their original sealed containers bearing manufacturer's name and identification of product.
- B. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- C. Protect stored materials from direct sunlight.
- D. Protect coatings from freezing temperatures and temperatures in excess of 90 degrees F.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.
 - 1. Protect substrates from environmental conditions that affect air-barrier performance.
 - 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.10 WARRANTY

- A. Manufacturer's Warranty: Provide manufacturer's standard product warranty covering labor and materials for defects in workmanship for weather barriers, including all components, for a minimum 10 years from date of Substantial Completion.
- B. Special Installer's Warranty: Provide air barrier installer's 2 year warranty from date of Substantial Completion, including all components of the air barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations: Obtain primary materials and air-barrier accessories from single source manufacturer to achieve specified warranty. Additional accessory products are acceptable for use provided they are approved by the primary air barrier manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Air barrier shall be capable of performing as a continuous vapor-retarding permeable air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed dampproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at a pressure differential of 1.57 psf (75 Pa) when tested in accordance with ASTM E 2357, including materials, penetrations and connections.
- C. Membrane Air Leakage: Air permeance not to exceed 0.004 cfm/sq. ft. of surface area at a pressure differential of 1.57 psf (75 Pa) when tested in accordance with ASTM E 2178.
- D. Provide an air barrier assembly that withstands combined positive and negative design wind, fan and stack pressures on the envelope without damage or displacement, that transfers the load to the structure, and that does not displace adjacent materials under full load. Join air barrier system materials in an airtight and flexible manner to adjacent assemblies, allowing for the relative movement of assemblies due to thermal and moisture variations and creep, and anticipated seismic movement.

2.3 VAPOR-PERMEABLE MEMBRANE AIR-BARRIER

- A. Fluid-Applied, Vapor-Permeable Membrane Air Barrier:
 - 1. Silicone Based Technology Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corp.; Defend Air 200.
 - b. Momentive Performance Materials; Elemax 2600 AWB.

2. STPE Based Technology Products: Subject to compliance with requirements, provide one of the following:
 - a. DuPont; Tyvek Fluid Applied WB +.
3. Physical and Performance Properties:
 - a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E 2178.
 - b. Vapor Permeance: Minimum 10 perms; ASTM E 96/E 96M.
 - c. Ultimate Elongation: Minimum 200 percent; ASTM D 412, Die C.
 - d. Structural-Test Performance: Test according to ASTM E 330 or ASTM E1233 at a positive or negative pressure of 30psf.
 - 1) No cracking within the field of the panel, substrate joints and at interface of flashing.
 - e. Water Penetration under Static Pressure: No evidence of water penetration through the air barrier assembly when tested according to ASTM E 331 at a minimum static-air-pressure differential of 6.24 lbf/sq.ft..
 - 1) Water Penetration: Water leakage to the interior of the building is a failure. Water observed on interior surfaces of the system or adjacent wall systems is a failure.

2.4 ACCESSORY MATERIALS

- A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier material.
- B. Transition Membrane: Between Air Barrier Membrane and Other Adjacent Materials: Comply with both air barrier manufacturer's recommendations and adjacent material manufacturer's recommendations.
 1. Fluid-Applied Flashing: Manufacturer's standard trowel grade liquid flashing.
 - a. Joint Reinforcing Strip: Air-barrier manufacturer's glass-fiber-mesh tape.
 2. High Temperature Modified Bituminous Strip: 40 mils thick, smooth surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick polyethylene film with release liner backing.
 - a. For use under metal copings and flashings directly exposed to the exterior.
 3. Foil Faced Modified Bituminous Strip: 40 mils thick, smooth surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick polyethylene film with release liner backing.
 4. Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.
 - a. Dow Corning Corporation; Silicone Transition Strip System.
 - b. Momentive Performance Materials Inc.; US11000 UltraSpan.
 - c. Tremco Incorporated; Proglaze ETA Connections.
 5. Self-Adhering Stainless Steel Flexible Flashing:
 - a. Subject to compliance with requirements, provide the following:
 - 1) York Manufacturing Inc.; York 304.
 - b. Characteristics:
 - 1) Type: Stainless steel with one stainless steel face (facing outwards) with a butyl block co-polymer adhesive (inward facing).
 - 2) Stainless Steel: Type 304, ASTM A240. Domestically sourced per DF ARS 252.225-7008 and/or DF ARS 252.225-7009.
- C. Primer: Liquid primer recommended for substrate by air-barrier material manufacturer.

- D. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
- E. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.
- F. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, 0.0187 inch thick, and Series 300 stainless-steel fasteners.
- G. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, 1.5- to 2.0-lb/cu. ft density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
- H. Joint Sealants: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 079200 "Joint Sealants."
- I. CMU Block Filler: Manufacturer's standard filler.
- J. Concrete Filler: Manufacturer's standard filler.
- K. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.
- L. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchor spacing of 9" on center minimum unless otherwise required by the manufacturer. Provide galvanized sheet metal backup plate at locations where adequate substrate is not available for securing the termination bar.
- M. Provide galvanized sheet metal backup plate at locations where adequate substrate is not available for securing the cladding accessories and attachments, flashings, and termination bars.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 - 2. Provide verification in writing from the air-barrier manufacturer that concrete has cured and aged for minimum time period required by air-barrier manufacturer.
 - 3. Verify that concrete is visibly dry and free of moisture.
 - 4. Perform moisture testing as required by air-barrier manufacturer for test type, rate, and quantity to validate that substrate is acceptable, dry, and free of moisture.
 - 5. Verify that the minimum concrete drying period recommended by air barrier system manufacturer has passed. Perform moisture content testing as required by the air barrier system manufacturer to verify concrete is acceptable for installation of air barrier.
 - 6. Verify that masonry joints are flush and completely filled with mortar.
 - 7. Verify sealants used in sheathing are compatible with membrane proposed for use. Perform field peel-adhesion test on materials to which sealants are adhered.
 - 8. Verify that metal strapping has been installed where required for securing accessories such as termination bars and flashings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

- A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.
 - 1. Prime substrate and apply air-barrier manufacturer's recommended thickness, number of coats, and reinforcement extending a minimum of 3 inches along each side of joints and cracks. Apply a double thickness of fluid air-barrier material and embed a joint reinforcing strip in preparation coat.
- B. Gypsum Sheathing: Fill joints greater than 1/4 inch with sealant according to ASTM C 1193 and air-barrier manufacturer's written instructions. Apply first layer of fluid air-barrier material at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air-barrier material over joint reinforcing strip.

3.4 TRANSITION MEMBRANE INSTALLATION

- A. General: Install transition membrane and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 - 1. Coordinate the installation of air barrier with installation of roofing membrane, below grade waterproofing, and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install manufacturer's recommended transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- C. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials as recommended by manufacturer.

- D. At end of each working day, seal top edge of transition membrane to substrate with termination mastic.
- E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition membrane so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing surface.
 - 1. Provide fluid-applied membranes for manufacturer's that offer it as part of the air barrier system.
 - 2. For manufacturers that do not offer a liquid flashing, use transition membrane method that is acceptable to the air barrier manufacturer and that is chemically and adhesively compatible with the adjacent construction.
 - a. Self-Adhering Stainless Steel Flexible Flashing Transition Strip: Roll firmly to enhance adhesion.
 - b. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material. Tool sealant along edges of extrusion.
- G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- H. Seal transition membrane around masonry reinforcing or ties and penetrations with termination mastic.
- I. Seal top of through-wall flashings to air barrier with an additional 6-inch- wide, transition membrane.
- J. Seal exposed edges of transition membrane at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- K. Repair punctures, voids, and deficient lapped seams in transition membrane. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.5 FLUID AIR-BARRIER MEMBRANE INSTALLATION

- A. General: Apply fluid air-barrier material to form a seal with transition membrane and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply fluid air-barrier material within manufacturer's recommended application temperature ranges.
 - 1. Apply primer to substrates at required rate and allow it to dry.
 - 2. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 3. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats as recommended by the manufacturer and as needed to achieve required bond, with adequate drying time between coats.
- B. Membrane Air Barriers: Apply a continuous unbroken air-barrier membrane to substrates according to the following thickness. Apply air-barrier membrane in full contact around protrusions such as masonry ties.
 - 1. Apply to a total wet film thickness as required by the membrane manufacturer to meet the performance requirements indicated.
- C. Apply transition membrane according to air-barrier manufacturer's written instructions.
- D. Provide air barrier and accessories that are acceptable for use at horizontal surfaces without detrimental effects to material.
- E. For exterior cladding and veneer attachment devices and accessories such as clips, thermal breaks, brick ties, flashings, stone/metal coping fasteners, and metal panel anchors:

1. Set device in a full bed of sealant after air barrier is cured.
2. Seal over fastener heads after device is secured.
3. Seal top edge of accessories installed in the horizontal orientation.

F. Do not cover air barrier until it has been tested and inspected by District's testing agency.

G. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: District will engage a qualified testing agency to perform tests and inspections.

B. District's Inspection and Testing: Cooperate with District's testing agency. Allow access to work areas and staging. Notify District's testing agency in writing of schedule for Work of this Section to allow sufficient time for testing and inspection. Daily inspection and testing may be required. Do not cover Work of this Section until testing and inspection is accepted.

C. Periodic Inspections: Provide for air barrier system manufacturer's technical personnel to inspect installation weekly during periods of ongoing installation.

D. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:

1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Air-barrier dry film thickness.
3. Air-barrier wet film thickness (to be performed by installer at time of installation and included on daily worksheet).
4. Continuous structural support of air-barrier system has been provided.
5. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
6. Site conditions for application temperature and dryness of substrates have been maintained.
7. Maximum exposure time of materials to UV deterioration has not been exceeded.
8. Surfaces have been primed, if applicable.
9. Laps in transition membranes have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
10. Termination mastic has been applied on cut edges.
11. Transition membranes are firmly adhered to substrate.
12. Compatible materials have been used.
13. Transitions at changes in direction and structural support at gaps have been provided.
14. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
15. All penetrations have been sealed.

E. Field Tests:

1. Allow sufficient time for testing and inspection and provide a schedule in advance to the Testing Agency.
2. Whenever Work is to be done, notify Testing Agency in sufficient time to provide inspections.
3. Submit test results in accordance with specified standards, including retesting if initial results are not satisfactory.
4. Test to be distributed uniformly across all elevations.
5. Membrane Adhesion Test: Test materials for a minimum air-barrier adhesion of 16 lbf/sq. in. or to manufacturer's minimum adhesion level per substrates, whichever is greater in accordance with ABAA T0002. Perform test after curing period recommended by the manufacturer. Record mode of failure and area which failed in accordance with referenced standard. To be performed by installer and included on daily worksheet.

- a. Test Site Locations: Perform 1 test once daily per substrate during installation and a minimum of 4 test sites per major elevation per substrate. (Each test site includes 3 pull tests).
 - 1) Perform one test for the first 2500 sq. ft. of installed material for each wall assembly type.
 - b. Provide an inspection report in accordance with referenced standard that indicates whether or not the air barrier material has met the minimum adhesion level requirement and include photo documentation.
 - c. Provide reports within 3 days of test completion.
6. Qualitative Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber depressurization using detection liquids.
- a. Test Locations: Provide ten tests for each penetration type per 2500 sq. ft. of each substrate. Distribute test locations across all elevations.
 - b. Test Pressure: 500 Pa.
 - c. Pass/Fail Criteria: Visual observation of air leakage evidenced by continuous foaming "bubbling" of detection liquid is considered a failed test.
 - d. Provide an inspection report that indicates results and include photo documentation.
7. Qualitative Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers.
- a. Testing to be performed concurrent with Qualitative Water Infiltration Testing below.
 - b. Pass/Fail Criteria: Visual observation of air leakage evidenced by smoke tracer penetrating air barrier system is considered a failed test.
 - c. Provide an inspection report that indicates results, including photos.
8. Water Spray Test: Before installation of interior finishes has begun, areas designated by the Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
- a. Perform tests at transitions to adjacent wall assemblies, control joints, deflection joints, and expansion joints.
 - b. Test 500 linear feet of all joint locations.
 - c. Water Infiltration:
 - 1) Water leakage to the interior of the building is a failure.
 - 2) Water observed on interior surfaces of the system is a failure.
 - 3) Water observed on interior surfaces of adjacent systems, originating from the wall system or the transition to the adjacent systems, is a failure.
9. Wet Film Thickness Test (to be performed by installer at time of installation and included on ABAA QAP daily worksheet):
- a. Test material using wet film gauge to confirm that membrane meets manufacturer's indicated wet film thickness requirements.
 - b. Regularly check per coat per substrate type during installation per ABAA QAP.
 - c. Failure Criteria:
 - 1) A measurement less than manufacturer's required wet film thickness is considered a failure.
 - 2) Provide an inspection report indicating results and include photo documentation.
 - 3) Provide inspection report indicating results and include photo documentation.
10. Dry Film Thickness Test:
- a. Test material in accordance with manufacturer's requirements to confirm that cured membrane meets manufacturer's indicated dry film thickness requirements.
 - b. Three 1 inch x 4 inch samples removed from separate areas with gypsum facer intact to avoid stretching membrane.

- c. Test Locations: Once daily per substrate during installation and a minimum of 1 test per major elevation per substrate.
 - 1) Perform one test for the first 2500 sq. ft. of installed material for each wall assembly type.
 - 2) Provide an inspection report in accordance with referenced standard that indicates whether or not the air barrier material has met the minimum adhesion level requirement and include photo documentation.
 - 3) Provide reports within 3 days of test completion.
 - d. Failure Criteria:
 - 1) A measurement less than manufacturer's required dry film thickness is considered a failure.
 - e. Provide an inspection report indicating results and include photo documentation.
11. Air barriers will be considered defective if they do not pass tests and inspections.
- a. Wet Film Thickness: Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
 - b. Upon failure of dry film testing or Adhesion Testing:
 - 1) Determine cause of failure.
 - 2) Provide one additional test for each occurrence of failure.
 - 3) Repair deficient air barrier components per manufacturer's recommendations.
 - 4) Repair tested areas per manufacturer's recommendations.
 - c. Upon failure of water spray testing:
 - 1) Determine cause of failure.
 - 2) Repair per manufacturer's recommendations and retest deficient air barrier components.
 - 3) Determine if deficient conditions are present elsewhere on the building and repair per manufacturer's recommendations.
 - 4) Provide 75 linear feet of additional tests for each occurrence of failure.
- F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
- G. Repair non-conforming substrates and fluid-applied water/air barrier material installation to conform with project requirements.
- H. Take corrective action to repair and replace, reinstall, seal openings, gaps, or other sources of air leakage to conform with project performance requirements.
- I. Clean air barrier materials that were affected by testing procedures to a level equal to or better than the original condition after testing is complete using cleaning agents and procedures recommended by manufacturer of affected construction.
- J. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

3.7 CLEANING AND PROTECTION

- A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
 - 1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for longer than allowed by manufacturer, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.
 - 2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

- B. Repair or replace fluid-applied water/air barrier materials damaged during construction in accordance with manufacturers' recommendations at no additional cost to the District.
- C. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.
- D. Remove masking materials after installation.

END OF SECTION

SECTION 074213.13 - FORMED METAL WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Concealed-fastener, lap-seam metal panels for walls and screens.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
1. Meet with District, Architect, District's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
 6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
 7. Review temporary protection requirements for metal panel assembly during and after installation.
 8. Review of procedures for repair of metal panels damaged after installation.
 9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
- B. Shop Drawings:
1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
 2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches (1:10).
- C. Samples for Initial Selection: For each type of metal panel indicated with factory-applied finishes.
1. Include Samples of trim and accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish, prepared on Samples of size indicated below:
1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.
- C. Provide the following upon request:
 - 1. Qualification Data: For Installer.
 - 2. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- D. Mockups: Build first-in-place mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical metal panel assembly as shown on Drawings, including portion with corner, soffits, supports, attachments, and accessories.
 - 2. Water-Spray Test: Conduct water-spray test of metal panel assembly mockup, testing for water penetration in accordance with AAMA 501.2.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.

1.7 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed in accordance with manufacturers' written instructions and warranty requirements.

1.8 COORDINATION

- A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Warranty on Organic Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested in accordance with ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing in accordance with ASTM E 1592:
1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: As indicated on Drawings.
 3. Deflection Limits: For wind loads, no greater than 1/180 of the span.
- B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested in accordance with ASTM E 283 at the following test-pressure difference:
1. Test-Pressure Difference: 1.57 lbf/sq. ft. (75 Pa).
- C. Water Penetration under Static Pressure: No water penetration when tested in accordance with ASTM E 331 at the following test-pressure difference:
1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- E. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 CONCEALED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. General: Provide factory-formed metal panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.
- B. Concealed-Fastener Metal Wall Panels, EXT-02#: Formed with vertical panel edges and a flat pan between panel edges; with flush joint between panels.
1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

- a. Morin Matrix MX-2 (EXT-02A) and MX-6 (EXT-02B and EXT-02C), or comparable by one of the following:
 - 1) CENTRIA Architectural Systems.
 - 2) Fabral.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: 0.040 inch (1.02 mm) (20 gauge).
 - b. Surface: Smooth, flat finish.
 - c. Exterior Finish: Fluoropolymer.
 - 1) Color: As indicated on Drawings.
 3. Panel Coverage: 12 inches (305 mm).
 4. Panel Height: 1.5 inches (38 mm).
 5. Attachment Assembly: Manufacturer's standard attachment system attached to z-girt subframing system with continuous insulation board over sheathing.
- C. Concealed-Fastener Metal Screen Wall Panels, EXT-03: Formed with vertical panel edges and a flat pan between panel edges; with flush joint between panels.
1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
 - a. Morin Matrix MX-6, or comparable by one of the following:
 - 1) CENTRIA Architectural Systems.
 - 2) Fabral.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Thickness: 0.040 inch (1.02 mm).
 - b. Surface: Smooth, flat finish.
 - c. Exterior Finish, both exposed sides: Fluoropolymer.
 - 1) Color: As indicated on Drawings.
 3. Panel Coverage: 12 inches (305 mm).
 4. Panel Height: 1.5 inches (38 mm).
 5. Attachment Assembly: Manufacturer's standard attachment system attached to exposed HSS screen wall framing.

2.3 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
 1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.

3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- E. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
 2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.4 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate in accordance with equipment manufacturer's written instructions and to comply with details shown.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 3. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 5. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Aluminum Panels and Accessories:
 - 1. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Colors: As indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 - 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration and water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages in accordance with ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

- A. General: Install metal panels in accordance with manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Shim or otherwise plumb substrates receiving metal panels.
 - 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 - 3. Install screw fasteners in predrilled holes.
 - 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 5. Install flashing and trim as metal panel work proceeds.

6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
1. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
- C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- D. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
1. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
 2. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 3. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
 4. Flash and seal panels with weather closures at perimeter of all openings.
- E. Watertight Installation:
1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels; and elsewhere as needed to make panels watertight.
 2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
 3. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with sealant and fastened together by interlocking clamping plates.
- F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal wall panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.
- G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: District will engage a qualified testing agency to perform tests and inspections.

- B. Water-Spray Test: After installation, test area of assembly as directed by Architect for water penetration in accordance with AAMA 501.2. Test air barrier penetrations after attachment of rainscreen brackets before and after installation of metal wall panels.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.
- D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
- E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.5 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 075419 - POLYVINYL-CHLORIDE (PVC) ROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Adhered PVC membrane roofing system, including accessories, terminations, vapor retarders, insulation, flashing and other construction necessary to provide a leak-free, ponding-free roofing system.
 2. Walkway pads.
- B. Related Requirements:
1. Division 06 Section "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking.
 2. Division 06 Section "Sheathing" for wood-based, structural-use roof deck panels.
 3. Division 07 Section "Sheet Metal Flashing and Trim" for metal roof penetration flashings, flashings, and counter-flashings.
 4. Division 07 Section "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.2 DEFINITIONS

- A. Roofing Terminology: See ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
1. Individual product data sheets are to be fully annotated to clearly indicate specific product characteristics such as: thickness, dimensions, type, classification, etc.
- B. Shop Drawings: For roofing system, include plans, elevations, sections, project specific details, applicable manufacturer's standard details, and attachments to other work.
1. Base flashings and membrane terminations.
 2. Layout of tapered insulation and/or crickets including, but not limited to, slope, heights from drain, connections/securement to structural deck
 3. Roof plan showing orientation of steel roof deck and orientation of membrane roofing, membrane adhesive patterns, and patterns and spacing of mechanically fastened of substrate boards.
 4. Adhesion patterns for insulation and cover board for corner, perimeter, and field-of-roof locations.
 5. Layout and quantity of walkway pads. Include plans, dimensions, connection to roof, and relationship to adjacent roofing appurtenances.
 6. All membrane-clad sheet metal configurations.
 7. Shop drawing showing Manufacturer's required number of perimeter half sheet for project specific uplift requirements, per building.
 8. Shop drawing showing Manufacturer's required plate and fastener spacing pattern for perimeters, base of walls, curbs, vent pipes or any other roof penetrations for project specific uplift requirements, per building.
 9. Include flashings, tie-ins, edges, terminations, expansion joints, penetrations and joints. Provide shop drawings for assemblies indicated below. Do not copy and provide Engineer's construction drawings as shop drawings.
- C. Samples for Verification: For the following products:
1. Sheet roofing, of color specified, including T-shaped side and end lap seam.
 2. Roof insulation.
 3. Walkway pads, rolls, or pavers.

4. Metal termination bars.
5. Membrane cladded flashing; manufacturer's standard size.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer and manufacturer.
- B. Research/Evaluation Reports: For components of membrane roofing system, from the ICC-ES.
- C. Copy of Manufacturer's NOA forms.
- D. Approved Contractor Certification: Signed by manufacturer certifying that Contractor is a certified Contractor in good standing with the manufacturer and is qualified to perform the specified work and able to receive the required warranties.
- E. Work History Certification: Contractor's recent work history data of successful warranted installations similar to that of this Project within the last 5 years.
- F. Manufacturer's Certification: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 1. Submit evidence of compliance with performance requirements.
- G. Certificates: By manufacturers of roofing and accessory materials that all materials supplied comply with all requirements of the identified ASTM and industry standards or practices.
- H. Test Reports: UL Class A Fire Resistance approval.
- I. Sample Warranties: Sample copies of manufacturer and Contractor warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing system to include in maintenance manuals.
- B. Final roofing warranties.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product, and has been continuously authorized for a minimum five (5) years prior to execution of agreement, and that is eligible to receive manufacturer's special warranty.
 1. Firm shall have successfully completed manufacturer's training as required.
 2. Installer personnel trained and authorized by the manufacturer shall complete all work pertaining to the installation of the Work of this Section, including membrane and flashings.
 3. Use adequate amounts of such qualified workmen who are thoroughly trained in the crafts and techniques required to properly install the type of roofing system specified and other work required to complete the Work specified and within the specified time.
- B. Manufacturer Qualifications: A qualified manufacturer that is UL listed for membrane roofing system identical to that used for this Project.
- C. There shall be no deviation made from the Project Specification or the approved Shop Drawings without prior written approval by the District, Architect, and membrane manufacturer.

- D. Suitability of Contract Documents: Verify that the Contract Documents are workable and not in conflict with the manufacturers' recommendations and instructions prior to the start of the Work. 1. Start of the Work constitutes acceptance of project conditions and requirements.
- E. Membrane roofing and associated Work shall be in compliance with NRCA recommendations. Where requirements of the Contract Documents are more stringent, the more stringent shall apply.
- F. Exterior Fire-Test Exposure: ASTM E 108 and UL 790, Class A; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
- G. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- H. Pre-installation Roofing Conference: Conduct conference at Project site.
 - 1. Meet with District, Architect, District's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
 - 2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
 - 3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
 - 5. Review structural loading limitations of roof deck during and after roofing.
 - 6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
 - 7. Review governing regulations and requirements for insurance and certificates if applicable.
 - 8. Review temporary protection requirements for roofing system during and after installation.
 - 9. Review roof observation and repair procedures after roofing installation.
- I. Provide the following upon request:
 - 1. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.
 - 2. Field quality-control reports.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

- E. Membrane rolls shall be stored lying down on pallets. Opened rolls shall be fully protected from the weather with clean canvas tarpaulins (visqueen). Un-vented polyethylene tarpaulins are not accepted due to the accumulation of moisture beneath the tarpaulin in certain weather conditions.
- F. Do not overload roof. Load materials so as not to cause structural damage or failure, or create a safety hazard.
- G. Adhesives shall be stored at temperatures between 40 degrees F and 80 degrees F unless manufacturers require more stringent temperature limits.
- H. Flammable materials shall be stored in a cool, dry area away from sparks and open flames. Follow precautions outlined on containers or supplied by material manufacturer/supplier.
- I. Materials which are determined to be damaged by the Consultant, Owner or the manufacturer are to be removed from the job site and replaced at no cost to the Owner.
- J. Keep storage area neat and orderly.

1.8 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed in accordance with manufacturer's written instructions and warranty requirements.

1.9 WARRANTY

- A. Manufacturer's Total System Warranty: Warranty all work under this section in a written document endorsed by the Manufacturer. Manufacturer's warranty must include membrane and all accessory products covering defects in workmanship and materials; and all corrective actions necessary to repair damage to the roof membrane and materials caused by roof leaks or improper application.
 - 1. Warranty shall include coverage of ponding water areas.
 - 2. Warranty Period: 20 years from date of Substantial Completion.
- B. Installer Warranty: Installer's workmanship warranty in which installer agrees to repair or replace components of membrane roofing system including, but not limited to, roofing, flashing or metal, that fail in materials or workmanship within the specified warranty period. Repair or replacement shall also include thermal barrier board, insulation, substrate board, and accessory products.
 - 1. Warranty shall include all corrective actions necessary to repair damage to the roof membrane and components caused by roof leaks or improper application
 - 2. Warranty shall cover leaks from failure to resist penetration of water during construction. Special Warranty includes roofing assembly from top of substrate deck to top of roofing including all components such as vapor retarders, fasteners, adhesives, roofing membrane, ballast, seals and sealants, flashing and venting.
 - 3. Warranty Period: Five (5) years from date of Substantial Completion.
- C. Warranties shall be written on form at the end of this Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
- B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
- C. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated in accordance with ASCE/SEI 7.
 - 1. Corner Uplift Pressure: Refer to Drawings.
 - 2. Perimeter Uplift Pressure: Refer to Drawings.
 - 3. Field-of-Roof Uplift Pressure: Refer to Drawings.
- D. Solar Reflectance Index: Three-year-aged SRI not less than 64 or initial SRI not less than 82 when calculated in accordance with ASTM E 1980, based on testing identical products by a qualified testing agency.
- E. Energy Performance: Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested in accordance with CRRC-1.

2.2 PVC MEMBRANE ROOFING

- A. PVC Sheet: ASTM D 4434, Type II or III, Grade I, glass fiber or fabric reinforced, felt or fabric backed.
 - 1. Basis-of-Design Products: Subject to compliance with requirements, provide the following:
 - a. Sika Sarnafil; Sarnafil G410 (No known equal according to College campus standards)
 - 2. Thickness: 60 mils, nominal.
 - 3. Exposed Face Color: White

2.3 AUXILIARY MEMBRANE ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.
 - 1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet membrane.
- C. PVC-Clad Metal Flashing: Manufacturer's standard.
 - 1. Product: Sika Sarnaclad
- D. Fluid Applied Flashing: PMMA or as recommended by membrane manufacturer
 - 1. Product: Sika Liquid Flashing
- E. Polyurethane resin: Low-VOC/odor, cold-applied, elastic, aliphatic, single component.

1. Product: Sika Sikalatic-641 Lo-VOC
- F. Bonding Adhesive: Manufacturer's standard.
- G. Slip Sheet: Manufacturer's standard, of thickness required for application.
- H. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
- I. Joint Sealants: Refer to Section 079200 "Joint Sealants" for sealants used in conjunction with roofing and tie-ins to air barriers.
- J. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint patches, lap sealants, sealant tape, tape strips, and aluminum tape, PVC-coated metal flashings and termination reglets, and other accessories.

2.4 SUBSTRATE BOARDS

- A. Glass-Mat Faced Gypsum Roof Board: ASTM C1177/C1177M, glass-mat, water-resistant gypsum board or ASTM C1278/C1278M fiber-reinforced gypsum board, 1/2 inch thick; one of the following:
 1. Products, ASTM C1177: Subject to compliance with requirements, provide the following:
 - a. Georgia-Pacific Corporation; Dens Deck Roof Board, or comparable by one of the following:
 - 1) CertainTeed Corporation.
 - 2) National Gypsum Company.
 2. Products, ASTM C1278: Subject to compliance with requirements, provide the following:
 - a. USG Corporation; Securock Brand Gypsum-Fiber Roof Board.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

2.5 ROOF AIR BARRIER/VAPOR RETARDER

- A. Metal Roof Deck/Substrate Board or Existing Concrete Roof Deck Application:
 1. Self-Adhering-Sheet Vapor Retarder: Polyethylene film laminated to layer of modified bitumen adhesive, minimum 30-mil- total thickness; maximum permeance rating of 0.1 perm; cold applied, with slip-resisting surface and release paper backing. Provide water-based primer when recommended by vapor retarder manufacturer.
 - a. Products:
 - 1) Sika Sarnafil; Sarnavap Self-Adhered.
 - 2) Sika Sarnafil; Vapor Retarder TA 138
- B. New Concrete Roof Deck Application; One of the following:
 1. SBS Modified Bitumen: ASTM D6164.
 - a. Type I.
 - b. Grade S.
 - c. Torch-applied.
 2. 2-ply Built-up Asphalt Roof:
 - a. Glass-Fiber Felts: ASTM D 2178, Type IV, asphalt impregnated.
 - b. Roofing Asphalt: ASTM D 312, Type III or Type IV.
 - c. Asphalt Primer: ASTM D 41.

3. Self-Adhering Sheet Membrane specified above.

2.6 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by PVC membrane roofing manufacturer, of thicknesses indicated .
- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 2, Grade 2 coated glass facer on both major surfaces.
 1. Board Size: 4'-0" x 4'-0"
 2. Thickness: Two layers minimum, total minimum thickness as indicated on drawing. Provide a minimum aged thermal resistance of R5 (deg. F.h.sf/Btu) per inch.
- C. Tapered Insulation: Provide factory-tapered insulation boards with identical characteristics as base insulation fabricated to slope of 1/4 inch per 12 inches unless otherwise indicated.
- D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes with identical characteristics as base insulation where indicated for sloping to drain. Fabricate to slopes indicated.

2.7 INSULATION ACCESSORIES

- A. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.
- B. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 1. Bead-applied, low-rise, one-component or multicomponent urethane adhesive.
 2. Full-spread, spray-applied, low-rise, two-component urethane adhesive.
- C. Cover Board: ASTM C1177/C1177M, coated glass-mat, water-resistant gypsum board or ASTM C1278/C1278M fiber-reinforced gypsum board, 1/2 inch thick; one of the following:
 1. Products, ASTM C1177: Subject to compliance with requirements, provide the following:
 - a. Georgia-Pacific Corporation; Dens Deck Prime Roof Board; factory primed, or comparable by one of the following:
 - 1) CertainTeed Corporation.
 - 2) National Gypsum Company.
 2. Products, ASTM C1278: Subject to compliance with requirements, provide the following:
 - a. USG Corporation; Securock Brand Gypsum-Fiber Roof Board.
- D. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.
- E. Sprayed Polyurethane Foam: One- or two-component, foamed-in-place, closed cell polyurethane foam, 1.5- to 2.0-lb/cu. ft density; flame-spread index of 25 or less in accordance with ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam manufacturer.

2.8 ASPHALT MATERIALS

- A. Roofing Asphalt: ASTM D 312, Type III or Type IV.
- B. Asphalt Primer: ASTM D 41.

2.9 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch thick, and acceptable to membrane roofing system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
 - 1. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
 - 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 - 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section "Steel Decking."
 - 4. Verify that concrete has cured and aged for minimum time period required in writing by roofing manufacturer. Perform testing as required by roofing manufacturer for test type, rate, and quantity to validate that substrate is acceptable, dry, and free of moisture.
 - 5. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SUBSTRATE CONDITION

- A. Contractor shall be responsible for acceptance or provision of proper substrate to receive roofing materials.
- B. Verify that the work done under related sections meets the following conditions:
 - 1. Roof drains and/or scuppers have been reconditioned and/or replaced and installed properly.
 - 2. Roof curbs and nailers are properly secured and prepared to receive roofing materials.
 - 3. Surfaces are smooth, dry and free of dirt, debris and incompatible materials.
 - 4. Surfaces are free of standing water and visible moisture.
- C. Rusted or deteriorated substrate shall be repaired or removed and replaced. Deck type and attachment shall conform to local code requirements.
- D. Broken, delaminated, wet or damaged insulation or cover boards shall be removed and replaced.
- E. The substrate shall be clean, smooth, dry, free of flaws, sharp edges, loose and foreign material, oil and grease and be structurally sound. Sharp ridges, other projections and accumulations of bitumen above the surface shall be removed to ensure a smooth surface before roofing. Roofing shall not start until all defects have been corrected.
- F. Fastener Pull-out Tests: Perform pull-out tests to determine appropriate rate and type of fastener installation in presence of manufacturer's technical representative.
- G. Adhesion Tests: Perform pull-out tests to determine appropriate rate and pattern of adhesive installation in presence of manufacturer's technical representative.

3.3 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation in accordance with roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. The roof deck and roof construction must be structurally sound to provide support for the roofing system. Pre-load materials on the rooftop in such a manner to eliminate risk of deck overload due to concentrated weight.
- D. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

3.4 SUBSTRATE BOARD INSTALLATION

- A. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
 - 1. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof in accordance with membrane roofing system manufacturers' written instructions.

3.5 ROOF AIR BARRIER/VAPOR RETARDER INSTALLATION

- A. General:
 - 1. Install vapor/air barrier primer and membrane over a clean and dry substrate. Do not install when it is raining, snowing, or on wet/humid surfaces.
 - 2. Begin application of vapor/air barrier membrane at the bottom of the slope. Chalk a line on the substrate to align the sheet.
 - 3. Unroll, position, and align the vapor/air barrier membrane with the release liner covered selva edge on the up-slope side. After the sheet is placed in its final position, loosely reroll half the sheet toward the center of the roll.
 - 4. Carefully score the release liner across the width of the roll with a straight blade utility knife. Roll vapor/air barrier membrane into its final position as the release liner is being removed. Re-roll the remaining vapor/air barrier membrane and repeat the process.
 - 5. Roll vapor/air barrier membrane with a 100 lb steel roller to ensure full contact with the substrate. Finish by aligning the edge of the roller with the lower end of the side laps and rolling up the membrane. Do not cut the membrane to remove air bubbles trapped under the laps. Squeeze out air bubbles by pushing the roller to the edge of the laps.
 - 6. Stagger adjacent end laps a minimum of 12".
- B. Metal Roof Deck/Substrate Board or Existing Concrete Roof Deck Application:
 - 1. Self-Adhering-Sheet Air Barrier/Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet air barrier/vapor retarder over area to receive air barrier/vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches and 6 inches, respectively. Seal laps by rolling.
- C. New Concrete Roof Deck Application:
 - 1. SBS Modified Bitumen: Torch apply 1 ply of SBS modified bitumen vapor retarder in accordance with manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
 - 2. Built-up Vapor Retarder:

- a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. or as required by manufacturer and allow primer to dry.
 - b. Install two glass-fiber felt plies lapping each felt 19 inches over preceding felt.
 - c. Embed each felt in a solid mopping of hot roofing asphalt.
 - d. Glaze coat completed surface with hot roofing asphalt.
 - e. Apply hot roofing asphalt within plus or minus 25 deg F of equiviscous temperature.
3. Self-Adhering-Sheet Air Barrier/Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet air barrier/vapor retarder over area to receive air barrier/vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches and 6 inches, respectively. Seal laps by rolling.
- D. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.
1. Apply mastic to seal around penetrations. Use a trowel to mound mastic around the penetrations to seal the opening. Do not apply mastic where it may come into direct contact with the PVC membrane.
- E. Provide an air tight transition to the wall air barrier.

3.6 INSULATION INSTALLATION

- A. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Install tapered insulation under area of roofing to conform to slopes indicated.
- D. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.
- E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
- F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.
1. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
- G. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
1. Prime surface of vapor retarder as instructed by insulation adhesive manufacturer; allow primer to dry.
 2. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 3. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- H. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction. Loosely butt cover boards together .
1. Adhere cover boards with adhesive to resist uplift pressure at corners, perimeter, and field of roof.
- I. Install slip sheet over insulation cover board and immediately beneath membrane roofing.

- J. Sprayed Polyurethane Foam: Apply in accordance with manufacturer's written instructions.

3.7 ADHERED MEMBRANE ROOFING INSTALLATION

- A. Adhere membrane roofing over area to receive roofing and install in accordance with membrane roofing system manufacturer's written instructions and according to requirements contained within this Section, whichever is more stringent.
 - 1. Install sheet in accordance with ASTM D 5036.
- B. Install PVC membrane roofing system with positive slope to drains, free of standing (ponding) water. Install membrane roofing free of wrinkles
- C. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.
- D. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- E. Bonding Adhesive: Apply to substrate and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing. Adhesive shall be applied in smooth, even coats with no gaps, globs or similar inconsistencies.
- F. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, perimeter of roofing, base of wall, drains, curbs, perimeter of roofing and where indicated or required by manufacturer to meet uplift requirements.
- G. Apply membrane roofing with side laps shingled with slope of roof deck where possible.
- H. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings in accordance with manufacturer's written instructions to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
 - 2. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
- I. Install T-joint patches at all 3-way (or greater) membrane overlaps/intersections.
- J. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
- K. At existing building, install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing membrane roofing system.

3.8 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories and adhere to substrates in accordance with membrane roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing. Adhesive shall be applied in smooth, even coats with no gaps, globs or similar inconsistencies.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

- D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars where indicated.
 - 1. Coordinate flashing with counterflashing/coping installation.
- F. Flashings shall be installed concurrently with the roof membrane as the job progresses. Membrane shall be fully welded each day.
- G. No temporary flashings shall be allowed without the prior written approval of the Consultant and manufacturer. Approval shall only be for specific locations on specific dates. If any water is allowed to enter under the newly completed roofing, the affected area shall be removed and replaced at the Contractor's expense. Flashing shall be adhered to compatible, dry, smooth, and solvent-resistant surfaces. Use caution to ensure adhesive fumes are not drawn into the building.
- H. All flashings shall be installed concurrently with the roof membrane in order to maintain a watertight condition as the work progresses.
- I. Refer to detail drawings for flashing work. Comply with manufacturer requirements if more stringent.
- J. Provide enhanced securement of the membrane at the base of parapets, walls, curbs, penetrations, and drains. Refer to detail drawings.
- K. Terminate and seal top of penetration flashings with stainless steel wormgear clamp and sealant.
 - 1. Coordinate flashing with membrane umbrella installation complete with stainless steel Wormgear clamp and sealant.
- L. Flashings shall extend a minimum of 8 inches above roofing level. Flashings that exceed 30 inches in height shall receive additional securement. See Contract Drawings for additional securement requirements.

3.9 MISCELLANEOUS MATERIALS

- A. Spray Foam: Mix and install in accordance with manufacturer's written instructions. 1. Apply in thickness between ½-inch and 2-inches. 2. Allow material to cool prior to applying additional thickness. Do not apply additional spray foam while prior application is still rising. 3. Protect spray foam from heat sources including, but not limited to, welding and cutting equipment.
- B. Pipe/Conduit Supports: Install pipe supports where indicated and where necessary to support piping. Secure piping to pipe support in accordance with manufacturer's written instructions and recommendations.
- C. Aluminum Tape: Install aluminum tape as a means of separating membrane from contaminated material, bituminous coated cast iron pipes, and any other materials incompatible with membrane.

3.10 TEMPORARY CUT-OFF

- A. All temporary waterstops shall be constructed to provide a 100 percent watertight seal.
- B. The waterstop shall be sealed to the (e) roofing that water will not be allowed to travel under the new or existing roofing.
- C. If inclement weather occurs while a temporary waterstop is in place, the Contractor shall provide the labor necessary to monitor the situation to maintain a watertight condition.

- D. The edge of the membrane shall be sealed in a continuous heavy application of manufacturer approved sealant.
- E. When work resumes, the contaminated membrane shall be cut out. All sealant, contaminated membrane, insulation fillers and other components of waterstop shall be removed from the work area and properly disposed of off-site. None of these materials shall be used in the new work.
- F. If any water is allowed to enter under the newly-completed roofing, the affected area shall be removed and replaced at the Contractor's expense.

3.11 CLOSEOUT ACTIVITIES

- A. Final Roof Membrane Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion and submit report to Consultant.
 - 1. Notify Consultant and Owner 48 hours in advance of date and time of inspection.
 - 2. Substantial Completion: A "no-defect" final roof membrane inspection report is required prior to the Contractor requesting the Substantial Completion review.

3.12 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive in accordance with roofing system manufacturer's written instructions.
- B. Roofing membrane to receive walkway membrane shall be clean and dry.
- C. Inspect deck membrane seams that are to be covered by walkway pads with probing tool and re-weld any inconsistencies before walkway installation.
 - 1. Area to receive walkway protection membrane shall be reviewed and approved by the Architect and manufacturer prior to the installation of the walkway pads.
- D. Clean the deck membrane in areas to be welded.
- E. Provide 4-inch gap between walkway sections and between walkway and roof mounted items.
- F. Fully weld perimeter walkway.

3.13 FIELD QUALITY CONTROL

- A. Testing Agency: District will engage a qualified testing agency to perform tests and inspections.
- B. Tests:
 - 1. Fastener pull-out resistance tests performed by the manufacturer's technical representative. Testing shall be performed on walls and in the field of the roof. Coordinate with the manufacturer's technical representative.
 - 2. Adhesion tests performed by the manufacturer's technical representative. Testing shall be performed in the field of the roof. Coordinate with manufacturer's technical representative.
- C. Final Roof Membrane Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion and submit report to Architect.
 - 1. Notify Architect and District 48 hours in advance of date and time of inspection.
 - 2. Substantial Completion: A "no-defect" final roof membrane inspection report is required prior to the Contractor requesting the Substantial Completion review.

- D. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.
- E. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.14 PROTECTING AND CLEANING

- A. Remove and dispose of roofing debris on a daily basis. Protect all newly installed roof surfaces.
- B. Repair or replace components of roofing system and finished surfaces damaged or defaced due to the Work of this Project; comply with recommendations of manufacturers of components and surfaces.
- C. Contractor is responsible for the cleaning and removal of all debris or residue that is tracked from existing roof areas to the installed thermoplastic membrane.
- D. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and District.
- E. Where construction traffic must continue over finished roof membrane, provide durable protection and replace or repair damaged roofing to original condition.
- F. Correct deficiencies in or remove membrane roofing system that does not comply with requirements; repair substrates; and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and in accordance with warranty requirements.
- G. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

Roofing Special Warranty Form follows

ROOF SYSTEM SPECIAL WARRANTY FORM

Project Title:

Project Address:

Architect's Project No. Contractor's Job Number:

Warranted Work (and location description if less than full roof):

Specification Section No. and Title:

Length of Warranty: _____ years

The undersigned herewith warrant that the above stated Work has been executed in conformance with the requirements of the Contract Documents for the Project named and warrant said Work to perform as specified and without failure for the above stated period of time,

starting on _____, 20____, and ending on _____, 20____.

This warranty does not apply to failure to perform due to abuse or neglect by the District, or the District's successor in interest, or damage by vandalism.

SECTION 076200 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Custom flashing and trim fabrications and accessories, including the following:
1. Sheet metal materials, including:
 - a. Formed roof drainage sheet metal fabrications, including built-in gutters.
 - b. Formed low-slope roof sheet metal fabrications.
 - c. Formed wall sheet metal fabrications.
 2. Manufactured reglets and counterflashing
 3. High temperature self-adhering underlayment and flashing.
 4. Joint sealants associated with sheet metal flashing.
 5. Other sheet metal as indicated
 6. Miscellaneous materials.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site prior to commencement of field installation to establish procedures to maintain required working conditions and to coordinate this Work with related and adjacent Work.
1. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 2. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
 3. Review requirements for insurance and certificates if applicable.
 4. Review sheet metal flashing observation and repair procedures after flashing installation.
 5. Verify that final details comply with current recommendations published in SMACNA's "Architectural Sheet Metal Manual" and NRCA's Roofing and Waterproofing Manual.
 6. Meeting attendees shall include representatives for the Contractor, District, Architect, inspection agency, sheet metal contractor and installers of related and adjacent Work affected by or affecting sheet metal Work.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For sheet metal flashing and trim.
1. Plans, elevations, sections, and attachment details.
 2. Fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled Work.
 3. Identification of material, thickness, weight, and finish for each item and location in Project.
 4. Reference applicable Drawing details on all Shop Drawing details.
 5. Details for forming, including profiles, shapes, seams, and dimensions.
 6. Details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
 7. Details of termination points and assemblies, including fixed points.
 8. Details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
 9. Details of roof-penetration flashing.
 10. Details of edge conditions, including eaves, ridges, valleys, rakes, crickets, flashings, and counterflashings.
 11. Details of saddles, transitions and terminations in sheet metal flashing.
 12. Details of special conditions.

13. Details of connections to adjoining work.
 14. Details of perimeter conditions.
 15. Detail formed flashing and trim at scale of not less than 3 inches per 12 inches.
- C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of exposed finish.
- D. Samples for Verification: Actual sample of finished products for each type of exposed finish for sheet metal and other metal accessories.
1. Sheet Metal Flashing and Trim: 12 inch long by actual width of unit. Include finished seam with required profile. Include fasteners, cleats, clips, closures, and other attachments.
 2. Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches long and in required profile. Include fasteners and other exposed accessories.
 3. Fasteners, Accessories and Miscellaneous Materials: Full-size Samples.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sheet metal flashing and trim, and its accessories.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: Entity that employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Entity that employs a supervisor who is an NRCA ProCertified Roofing Foreman or installers who are NRCA ProCertified Architectural Metal Flashings and Accessories Installers.
1. For roof edge flashings and copings that are ANSI/SPRI/FM 4435/ES-1 tested, fabrication shop shall be listed as able to fabricate required details as tested and approved.
- C. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual: Architectural Metal Flashing, Condensation and Air Leakage Control, and Reroofing" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- D. Provide the following upon request:
1. Certificates: For each type of coping and roof edge flashing that is ANSI/SPRI/FM 4435/ES-1 tested.
 2. Product Test Reports: For each product, for tests performed by a qualified testing agency.
 3. Research Reports: For copings and roof edge flashing, from an agency acceptable to authority having jurisdiction showing compliance with ANSI/SPRI/FM 4435/ES-1.
 4. Qualification Statements: For fabricator and installer.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
1. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
 2. Protect stored sheet metal flashing and trim from contact with water.
- B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.7 COORDINATION

- A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.
- B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.8 WARRANTY

- A. Special Installer's Warranty: Manufacturer's standard form in which Installer agrees to repair or replace sheet metal flashing and trim that does not comply with performance and other requirements specified in this Section within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.
- B. Special Warranty on Organic Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, are to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim are not to rattle, leak, or loosen, and are to remain watertight.
- B. SPRI Wind Design Standard: Manufacture and install roof edge flashings, copings and cleats tested in accordance with ANSI/SPRI/FM 4435/ES-1 and capable of resisting the following design pressure:
 - 1. Design Pressure: As indicated on Drawings.
- C. Install systems to allow movement of components without causing buckling, failure of joint seals, undue stress on fasteners or other detrimental effects, when subjected to 100-year seasonal temperature ranges.
- D. Install specialized, custom fabricated, sheet metal saddles for waterproof performance at terminations and transitions of sheet metal flashing and trim such as multi-plane intersects, and:
 - 1. Where indicated.
 - 2. Where constructed conditions will not provide watertight performance without saddles.
- E. Contractor shall inspect transitions and terminations to make Project watertight. Contract Documents indicate design intent and may not indicate all instances where saddles apply. Field verify locations where saddles are required.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SHEET METAL MATERIALS

- A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.
- B. Aluminum Sheet: Coil-coated sheet, ASTM B209/B209M, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
1. Thickness: As indicated.
 2. Surface: Smooth, flat
 3. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1) Color: As indicated.
 4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil (0.013 mm).
- C. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with minimum ASTM A653/A653M, G90 (Z275) coating designation; structural quality.
1. Surface: Smooth, flat.
 2. Mill-Phosphatized Finish: Manufacturer's standard for field painting.
- D. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with minimum ASTM A653/A653M, G90 coating designation,; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.
1. Surface: Smooth, flat.
 2. Exterior Finish:
 - a. Two-Coat Fluoropolymer: AAMA 621, as applicable. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1) Color: As indicated.
 3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.
- E. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, dead soft, fully annealed.
1. Surface: Smooth, flat.
 2. Exterior Finish: ASTM A480/A480M, No. 2D (dull, cold rolled)
 - a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- F. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, dead soft, fully annealed.
1. Surface: Smooth, flat.
 2. Exterior Finish:
 - a. Two-Coat Fluoropolymer: AAMA 621, as applicable. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1) Color: As indicated.

G. Exterior Finish: Lead Sheet: ASTM B749 lead sheet.

1. Thickness: 4 lb (1.8 kg).

2.3 UNDERLAYMENT

A. Self-Adhering, High-Temperature Sheet Underlayment: Self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils thick, specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: Stable after testing at 240 deg F; ASTM D1970/D1970M.
2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F or lower; ASTM D1970/D1970M.
3. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Carlisle WIP Products; a brand of Carlisle Construction Materials.
 - b. GCP Applied Technologies.
 - c. Henry Company; a Carlisle company.
 - d. Owens Corning.
 - e. Protecto Wrap Company.
4. Basis-of-Design Product: GCP Applied Technologies; Grace Ultra, or approved equal by listed manufacturer.

B. Self-Adhering, High-Temperature Sheet Flashing: Self-adhering, cold-applied, sheet flashing, polyethylene faced: minimum of 30 mils thick; slip-resistant, polyethylene-film-reinforced top surface laminated to butyl rubber adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D1970/D1970M.
2. Basis-of-Design Product: GCP Applied Technologies; Grace Ultra, or approved equal by listed underlayment manufacturer.
3. For use when not in contact with Weather Barrier. Refer to Section 072726, "Fluid-Applied Membrane Air Barriers" for high-temperature product when in contact with weather barrier.

C. Slip Sheet: Rosin-sized building paper, 3 lb/100 sq. ft. minimum, of type required for application.

2.4 MISCELLANEOUS MATERIALS

A. Provide materials and types of fasteners, solder, welding rods, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.

B. Fasteners: Annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item. Nails secured into wood shall be annular threaded.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
 - b. Blind Fasteners: High-strength aluminum or stainless steel rivets suitable for metal being fastened.
2. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel in accordance with ASTM A153/A153M or ASTM F2329/F2329M.
3. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
4. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.

5. Fasteners for Stainless-Steel Sheet Metal to Stainless-Steel Sheet Metal Components: No.10, stainless steel sheet metal screws equipped with sealing washers.
 6. Drive Pin Anchors: Subject to compliance with requirements provide Zamac Nailin; Powers Fasteners or approved equal.
 - a. Body: Zamac alloy, mushroom.
 - b. Pin: Type 316 stainless steel.
 7. Fastener Length: Fasteners shall be sized to penetrate substrate not less than 1-1/4 inches or not less than 3/4 inch through wood substrates.
- C. Solder:
1. For Zinc-Coated (Galvanized) Steel: ASTM B32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead.
 2. For Stainless Steel: ASTM B32, Grade Sn60, with acid flux of type recommended by stainless steel sheet manufacturer.
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
- E. Elastomeric Sealant: ASTM C920, elastomeric silicone polymer sealant complying with Section 079200 "Joint Sealants"; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- F. Butyl Sealant: ASTM C1311, single-component, solvent-release, non-curing butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement complying with Section 079200 "Joint Sealants."
1. Provide butyl sealant between sheet metal laps, at concealed locations, and where indicated.
- G. Concealed Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
1. Provide pre-shimmed butyl sealant tape between sheet metal laps, at concealed locations, and where indicated.
- H. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- I. Sealing Washers: Stainless steel backed EPDM washers.
- J. Heavy Duty Wire Downspout Strainer: Stainless Steel Leaf Sieve
1. Product: Gromo No. 54006, or equal.
 - a. Size: 100
- K. Bituminous Coating: Cold-applied asphalt emulsion in accordance with ASTM D1187/D1187M.
- L. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.
- 2.5 FABRICATION, GENERAL**
- A. Custom fabricate sheet metal flashing and trim to comply with details indicated and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required.
1. Fabricate sheet metal flashing and trim in shop to greatest extent possible.

2. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
 3. Verify shapes and dimensions of surfaces to be covered and obtain field measurements for accurate fit before shop fabrication.
 4. Form sheet metal flashing and trim to fit substrates without excessive oil-canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
 5. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.
 6. Sheet metal components requiring fabrication must have shop drawings submitted and approved prior to fabrication and delivery to the project site. Materials delivered to the project site without the required Architect's approval shall be immediately removed from the site and not incorporated into the completed Work.
 7. Obtain field measurements for accurate fit before shop fabrication.
 8. Solder sheet metal prior to application of finish.
 9. Flashings shall have minimum 4 inch vertical back leg and 2 inch overlap at exposed side.
- B. Fabrication Tolerances:
1. Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 ft. on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.
 2. Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified.
- C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
 2. Use lapped expansion joints only where indicated on Drawings.
- D. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal in accordance with cited sheet metal standard to provide for proper installation of elastomeric sealant.
- E. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- F. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard for application, but not less than thickness of metal being secured.
- G. Seams: Solder seams watertight with the exception seams of prefinished metals including those coil-coated, seams requiring movement and seams otherwise indicated in Drawings or as specified.
1. Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder. Pop rivet pieces together at 1 inch on center prior to soldering. Sweat solder under the lap. Solder rivet holes watertight.
 2. Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Do not bead solder. Rivet joints where necessary for strength. Solder rivet holes to be watertight.
 3. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints where necessary for strength.
- H. Coil-Coated Seams: Fabricate nonmoving seams with flat-lock seams. Lap seams 4 inches and seal in a full bed of butyl sealant. Apply butyl sealant so it does not ooze out of seam. Rivet joints at 1 inch on center. Apply polyurethane sealant over rivets.
- I. Form pieces to a minimum length of 8 feet with the exception of pieces with a total length of less than 8 feet.
- J. Form pieces to maximum length of 10 feet.
- K. Corners: Sheet metal corner flashing shall be fully soldered to form one watertight piece.

- L. Hem exposed edges on underside 1/2 inch.
- M. Fabricate head flashing, sill flashing and similar with end closures and end dams soldered/welded watertight.
- N. Provide drip edges where indicated on the Contract Drawings.
- O. Provide 4 inch wide (minimum) horizontal flanges where dimension is not indicated on Contract Drawings
 - 1. Locations: Where flanges are stripped in or lapped for weather protection.
- P. Do not use graphite pencils to mark metal surfaces.

2.6 ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Built-in Gutters:
 - 1. Fabricate to cross section required, with riveted and soldered joints, complete with end pieces, outlet tubes, and other special accessories as required.
 - 2. Fabricate in minimum 96-inch- (2400-mm-) long sections. Fabricate expansion joints and accessories from same metal as gutters unless otherwise indicated.
 - 3. Fabricate gutters with built-in expansion joints and gutter-end expansion joints at walls and pockets.
 - 4. Accessories: Wire-ball downspout strainer.
 - 5. Fabricate from the following materials:
 - a. Stainless Steel: 0.0156 inch thick.
- B. Downspouts: Fabricate rectangular downspouts to dimensions indicated on Drawings, complete with mitered elbows. Furnish with metal hangers from same material as downspouts and anchors. Shop fabricate elbows.
 - 1. Fabricate from the following materials:
 - a. Galvanized Steel: 0.022 inch thick.
 - 2. Fabricated Hanger Style: SMACNA figure designation 1-35A, or approved equal.
 - 3. Fabricated Hanger Size: 1 inch wide by 1/16 inch thick.

2.7 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Custom Fabricated Copings: Fabricate in minimum 96-inch- (2400-mm-) long, but not exceeding 12 ft.- (3.6 m) long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of external leg and interior leg. Miter corners, solder or weld watertight. Shop fabricate interior and exterior corners.
 - 1. Fabricate from the following materials:
 - a. Galvanized Steel: 0.040 inch thick.
- B. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
 - 1. Galvanized Steel: 0.028 inch thick.
- C. Membrane Clad Metal: Refer to PVC roofing Section. Fabricate from the following materials.
 - 1. Galvanized Steel: 0.028 inch (0.71 mm) thick.
 - 2. Unreinforced PVC membrane laminated on one side, 20 mil thick.
 - 3. Color: Match membrane roofing.
- D. Edge Metal: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.
- E. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
1. Galvanized Steel: 0.028 inch thick.
- F. Flashing Receivers: Fabricate from the following materials:
1. Galvanized Steel: 0.028 inch thick.
- G. Roof-Penetration Flashing: Fabricate from one of the following materials:
1. Stainless Steel: 0.0188 inch thick.
 2. Lead: 4 lb.
- H. Roof-Drain Flashing: Fabricate from the following materials:
1. Stainless Steel: 0.0156 inch thick.

2.8 WALL SHEET METAL FABRICATIONS

- A. Opening Flashings in Frame Construction: Fabricate head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings. Form head and sill flashing with 2-inch- high, end dams. Fabricate from the following materials:
1. Head and Jamb: Galvanized Steel: 0.028 inch thick.
 2. Sill: Stainless Steel: 0.025 inch thick.
- B. Miscellaneous Wall Flashings: Where indicated or required, fabricate wall sheet metal flashings with minimum 4 inch vertical leg. Fabricate from the following materials:
1. Base Flashing: Galvanized Steel: 0.028 inch (0.56 mm) thick.
 2. Counterflashing: Galvanized Steel: 0.028 inch (0.56 mm) thick.
 3. Cleats: Galvanized Steel: 0.040 inch thick, minimum complying with performance requirements. Saddles: Galvanized Steel: 0.028 inch thick.

2.9 MISCELLANEOUS SHEET METAL FABRICATIONS

- A. Saddles, Transitions, and Terminations in Sheet Metal Flashing and Trim: Fabricate from the following materials:
1. Wall/Siding Related Flashing: Galvanized steel 0.028 inch , unless otherwise noted.
 2. Deck Related Flashing: Stainless steel 0.040 inch, unless otherwise noted.
- B. Provide specialized, custom fabricated, sheet metal saddles for waterproof performance at the following locations:
1. At terminations and transitions of sheet metal flashing and trim and construction components such as multi-plane intersects.
 2. Where constructed conditions will not provide watertight performance without saddles.
 3. Contractor shall inspect transitions and terminations to make Project watertight. Contract Documents indicate design intent and may not indicate all instances where saddles apply. Field verify locations where saddles are required.
 4. Where indicated.
- C. Fabricate saddles with diverters, minimum 1/2 inch high by 1 inch deep at multi-plane intersects and where indicated as occurs.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrates, and other conditions affecting performance of the Work.
 - 1. Verify compliance with requirements for installation tolerances of substrates.
 - 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
 - 3. Verify that air- or water-resistant barriers have been installed over substrate to prevent air infiltration or water penetration.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF UNDERLAYMENT

- A. Self-Adhering, High-Temperature Sheet Underlayment:
 - 1. Install self-adhering, high-temperature sheet underlayment; wrinkle free.
 - 2. Prime substrate if recommended by underlayment manufacturer.
 - 3. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures.
 - 4. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses.
 - 5. Overlap side edges not less than 3-1/2 inches. Roll laps and edges with roller.
 - 6. Roll laps and edges with roller.
 - 7. Cover underlayment within 14 days.
- B. Install slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.
 - 1. Install in shingle fashion to shed water.
 - 2. Lapp joints not less than 4 inches.

3.3 INSTALLATION OF HIGH TEMPERATURE SELF-ADHERING FLASHING

- A. Self-Adhering, High-Temperature Flashing: Install self-adhering sheet flashing, wrinkle free.
 - 1. Apply primer prior to installing high temperature self-adhering flashing.
 - 2. Comply with temperature restrictions of manufacturer for installation; use primer rather than nails for installing self-adhering flashing at low temperatures.
 - 3. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps with roller. Cover self-adhering flashing within 14 days.

3.4 INSTALLATION OF SHEET METAL FLASHING AND TRIM, GENERAL

- A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
 - 1. Install fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
 - 2. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, or sealant.
 - 3. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 4. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
 - 5. Install continuous cleats with fasteners spaced not more than 12 inches o.c.

6. Space individual cleats not more than 12 inches apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
 7. Install exposed sheet metal flashing and trim with limited oil-canning, and free of buckling and tool marks.
 8. Do not field cut sheet metal flashing and trim by torch.
 9. Install sealant tape where indicated.
 10. Torch cutting of sheet metal flashing and trim is not permitted.
 11. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or as recommended by SMACNA or NRCA.
1. Coat concealed side of uncoated-aluminum and stainless steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.
- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
1. Space movement joints at maximum of 10 ft. with no joints within 24 inches of corner or intersection.
 2. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.
 3. Use lapped expansion joints only where indicated on Drawings.
- D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as required for watertight construction.
1. Use sealant-filled joints unless otherwise indicated.
 - a. Embed hooked flanges of joint members not less than 1 inch into sealant.
 - b. Form joints to completely conceal sealant.
 - c. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way.
 - d. Adjust setting proportionately for installation at higher ambient temperatures.
 - 1) Do not install sealant-type joints at temperatures below 40 deg F.
 - e. Lap sheet metal flashing and trim 4 inches in a full bed of sealant. Sealant shall be fully concealed. Remove visible sealant.
 - f. Rivet sealed laps at 1 inch on center. Apply sealant over rivets.
 - g. Install compatible sealants where required to prevent direct weather penetration.
 2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter.
1. Pre-tin edges of sheets with solder to width of 1-1/2 inches; however, reduce pre-tinning where pre-tinned surface would show in completed Work.
 2. Do not solder aluminum, membrane-clad sheet metal, and prefinished sheet metal.
 3. Do not use torches for soldering.
 4. Heat surfaces to receive solder, and flow solder into joint.
 - a. Fill joint completely.
 - b. Completely remove flux and spatter from exposed surfaces.

5. Stainless Steel Soldering:
 - a. Tin edges of uncoated sheets, using solder for stainless steel and acid flux.
 - b. Promptly remove acid-flux residue from metal after tinning and soldering.
 - c. Comply with solder manufacturer's recommended methods for cleaning and neutralization.
6. Flat lock seams and lap seams, where soldered, shall be at least 1/2 inch. Pop rivet pieces together 1 inch on center prior to soldering. Seal solder under the lap. Do no bead solder. Solder rivet holes watertight.
7. Rivets: Rivet joints where indicated and where necessary for strength.
8. Thoroughly wash all flux off work after soldering. Failure to do so may result in damages to finishes.

H. Paint metal where indicated according to section 099113 "Exterior Painting."

3.5 INSTALLATION OF ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system in accordance with cited sheet metal standards unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.
- B. Built-in Gutters:
 1. Join sections with riveted and soldered joints
 2. Provide for thermal expansion.
 3. Slope to downspouts.
 4. Provide end closures and seal watertight with sealant.
 5. Install gutter with expansion joints at locations indicated on Drawings, but not exceeding, 50 ft. apart. Install expansion-joint caps.
- C. Downspouts:
 1. Connect downspouts to gutter. Join sections with 1-1/2-inch (38-mm) telescoping joints.
 2. Provide hangers with fasteners designed to hold downspouts securely to walls.
 3. Locate hangers at top and bottom and at approximately 60 inches (1500 mm) o.c.
 4. Provide elbows at base of downspout to direct water away from building.
 5. Connect downspouts to underground drainage system.
 6. Install splash block under downspout in case underground drainage system does not occur.

3.6 INSTALLATION OF SLOPED ROOF SHEET METAL FABRICATIONS

- A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standards.
 1. Provide concealed fasteners where possible, and set units true to line, levels, and slopes as indicated.
 2. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
- B. Copings:
 1. Install copings in accordance with ANSI/SPRI/FM 4435/ES-1.
 2. Anchor to resist uplift and outward forces in accordance with performance requirements, recommendations in cited sheet metal standards, and as indicated, unless otherwise indicated.
 - a. Interlock exterior bottom edge of coping with continuous cleat anchored to substrate..
 - b. Anchor interior leg of coping with washers and screw fasteners through slotted holes.
- C. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches (100 mm) over base flashing. Install stainless steel draw band and tighten.
- D. Counterflashing: Coordinate installation of counterflashing with installation of base flashing.

1. Insert counterflashing in reglets or receivers and fit tightly to base flashing.
2. Extend counterflashing 4 inches (100 mm) over base flashing.
3. Lap counterflashing joints minimum of 4 inches (100 mm) and bed with sealant..
4. Secure in waterproof manner by means of snap-in installation and sealant or lead wedges and sealant or interlocking folded seam or blind rivets and sealant unless otherwise indicated.

- E. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.7 INSTALLATION OF WALL SHEET METAL FABRICATIONS

- A. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with cited sheet metal standards unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.
1. Provide concealed fasteners where possible, set units true to line, and level as indicated.
 2. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
- B. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.

3.8 MISCELLANEOUS FLASHING INSTALLATION

- A. Saddles, Transitions, and Terminations: Coordinate installation of saddles, transitions, and terminations with installation of exterior cladding, self-adhering sheet waterproofing, weather resistive barrier, and other components of the construction as occurs.
1. Miscellaneous flashing not installed in accordance with the Contract Documents will require the removal and reinstallation of construction to properly install the required flashing at no additional cost to the District.

3.9 INSTALLATION TOLERANCES

- A. Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 ft. on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.10 CLEANING

- A. Clean and neutralize flux materials. Clean off excess solder.
- B. Clean off excess sealants.
- C. Clean exposed metal surfaces of substances with uniform oxidation and weathering.

3.11 PROTECTION

- A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended in writing by sheet metal flashing and trim manufacturer.
- C. Maintain sheet metal flashing and trim in clean condition during construction.

- D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION 076200

SECTION 077100 - ROOF SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Manufactured units for the following applications:
 - 1. Copings.
 - 2. Reglets and counterflashings.
 - 3. Underlayment.

- B. Related Requirements:
 - 1. Section 061053 "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking.
 - 2. Section 076200 "Sheet Metal Flashing and Trim" for custom- and site-fabricated, sheet metal flashing and trim.
 - 3. Section 077200 "Roof Accessories" for manufactured roof curbs, equipment supports, vents, and other manufactured roof accessory units.
 - 4. Section 079200 "Joint Sealants" for field-applied sealants between roof specialties and adjacent materials.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Meet with Owner, Architect, Owner's insurer if applicable, roofing-system testing and inspecting agency representative, roofing Installer, roofing-system manufacturer's representative, Installer, structural-support Installer, and installers whose work interfaces with or affects roof specialties, including installers of roofing materials and accessories.
 - 2. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
 - 3. Review special roof details, roof drainage, and condition of other construction that will affect roof specialties.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of roof specialty.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

- B. Shop Drawings: For roof specialties.
 - 1. Plans, expansion-joint locations, keyed details, and attachments to other work. Distinguish between factory pre manufactured- and field-assembled installation.
 - 2. Details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
 - 3. Indicate profile and pattern of seams and layout of fasteners, cleats, clips, and other attachments.
 - 4. Details of termination points and assemblies, including fixed points.
 - 5. Details of special conditions.

- C. Samples for Initial Selection: For each type of roof specialty indicated with factory-applied color finishes.

- D. Samples for Verification:
 - 1. Include Samples of each type of roof specialty to verify finish and color selection, in manufacturer's standard sizes.
 - 2. Include copings made from 12-inch (300-mm) lengths of full-size components in specified material, and including fasteners, cover joints, accessories, and attachments.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roof specialties.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer offering products that are ANSI/SPRI/FM 4435/ES-1 tested to specified design pressure.
- B. Provide the following upon request:
 - 1. Product Certificates: For each type of roof specialty copings that is ANSI/SPRI/FM 4435/ES-1 tested.
 - 2. Product Test Reports: For copings, for tests performed by a qualified testing agency.
 - 3. Research Reports: For copings, from an agency acceptable to authorities having jurisdiction showing compliance with ANSI/SPRI/FM 4435/ES-1.
 - 4. Qualification Statements: For manufacturer.

1.6 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof edge as indicated on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.
- B. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof-specialty installation.

1.8 FIELD CONDITIONS

- A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.9 COORDINATION

- A. Coordinate roof specialties with roofing system, exterior wall system, air barrier, flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, weathertight, secure, and noncorrosive installation.
 - 1. Performance Coordination: Coordinate with the Work of roofing and exterior wall Sections to ensure that roof specialties provided under the Work of this Section meet or exceed specified roofing and exterior wall design performance requirements.
- B. Confirm and coordinate compatibility of materials and comply with warranty requirements of roofing system manufacturer.
- C. Coordinate roof specialties layout and seams with sizes and locations of joints and seams in adjacent materials.

1.10 WARRANTY

- A. Roofing-System Warranty: Roof specialties are included in warranty provisions in Section 075419 "Polyvinyl-Chloride (PVC) Roofing."
- B. Special Warranty on Organic Finishes: Manufacturer agrees to repair finishes or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof specialties to withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. SPRI Wind Design Standard: Manufacture and install copings tested in accordance with ANSI/SPRI/FM 4435/ES-1 and capable of resisting the following design pressures:
 - 1. Design Pressure: As indicated on Drawings.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 MANUFACTURED COPINGS

- A. Metal Copings: Manufactured coping system consisting of metal coping cap in section lengths not exceeding 12 ft. (3.6 m), concealed anchorage; with corner units, end cap units, and concealed splice plates with finish matching coping caps.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Cheney Flashing Company.
 - b. Hickman; an MTL Company.
 - c. Metal-Era, Inc.
 - d. OMG Roofing Products; a Division of OMG, Inc.
 - e. PAC-CLAD; Petersen Aluminum Corporation; a Carlisle company.
 - 2. Metallic-Coated Steel Coping Caps: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, nominal 0.034-inch (0.86-mm) thickness.
 - a. Surface: Smooth, flat finish.
 - b. Finish: Two-coat fluoropolymer.
 - c. Color: As indicated.
 - 3. Corners: Factory mitered and soldered.
 - 4. Coping-Cap Attachment Method: face leg hooked to continuous cleat with back leg fastener exposed, fabricated from coping-cap material.

- a. Snap-on Coping Anchor Plates: Concealed, stainless-steel sheet, 12 inches (300 mm) wide, with integral cleats.
5. Custom Formed Copings: Refer to Section 076200 "Sheet Metal Flashing and Trim."

2.3 REGLETS AND COUNTERFLASHINGS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Cheney Flashing Company.
 2. Fry Reglet Corporation.
 3. Heckmann Building Products, Inc.
 4. Hohmann & Barnard Company (Sandell Industries, Inc.)
 5. Keystone Flashing Company, Inc.
 6. Hickman, W. P.
 7. Hohmann & Barnard, Inc.
- B. Reglets: Manufactured units formed to provide secure interlocking of separate reglet and counterflashing pieces, from the following exposed metal:
 1. Metallic-Coated Steel Sheet: Nominal 0.022-inch (0.56-mm) thickness.
 - a. Mill-Phosphatized Finish: Manufacturer's standard for field painting.
 2. Surface-Mounted Type: Provide reglets with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
 3. Stucco Type, Embedded: Provide reglets with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
 4. Concrete Type, Embedded: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
 5. Multiuse Type, Embedded: For multiuse embedment in cast-in-place concrete.
- C. Counterflashings: Manufactured units of heights to overlap top edges of base flashings by 4 inches (100 mm) and in lengths not exceeding 12 ft. (3.6 m) designed to snap into reglets and compress against base flashings with joints lapped, from the following exposed metal:
 1. Metallic-Coated Steel Sheet: Nominal 0.022-inch (0.56-mm) thickness.
 - a. Mill-Phosphatized Finish: Manufacturer's standard for field painting.
- D. Accessories:
 1. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where reglet is provided separate from metal counterflashing.
 2. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.

2.4 SHEET METAL MATERIALS

- A. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with minimum ASTM A653/A653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with minimum ASTM A792/A792M, Class AZ50 (Class AZM150) coating designation; structural quality. Mill phosphatized for field painting where indicated, otherwise as follows:
 1. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A755/A755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

- a. Two-Coat Fluoropolymer Finish: AAMA 2605. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight in color coat.
2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil (0.013 mm).

2.5 UNDERLAYMENT

- A. Self-Adhering, High-Temperature Sheet Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum 30 mils (0.76 mm) thick, specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer when recommended by underlayment manufacturer.
 1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D1970/D1970M.
 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (minus 29 deg C) or lower; ASTM D1970/D1970M.
 3. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ATAS International, Inc.
 - b. Carlisle WIP Products; a brand of Carlisle Construction Materials.
 - c. GCP Applied Technologies Inc.
 - d. Palisade; Brand of Intertape Polymer Group (IPG).
 - e. Polyglass U.S.A., Inc.
 - f. Protecto Wrap Company.
- B. Slip Sheet: Rosin-sized building paper, 3-lb/100 sq. ft. (0.16-kg/sq. m) minimum.

2.6 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation. Refer to Section 076200 "Sheet Metal Flashing and Trim" for information not included here.
- B. Fasteners: Roof specialty manufacturer's recommended fasteners, designed to meet performance requirements, suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
 1. Fasteners for Metallic-Coated Steel Sheet: Series 300 stainless steel or hot-dip zinc-coated steel in accordance with ASTM A153/A153M or ASTM F2329/F2329M.
 2. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
- C. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.
- D. Elastomeric Sealant: ASTM C920, elastomeric polyurethane silicone polymer sealant complying with Section 079200 "Joint Sealants" of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.
- E. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized complying with Section 079200 "Joint Sealants"; heavy bodied for hooked-type joints with limited movement.
- F. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- G. Asphalt Roofing Cement: ASTM D4586, asbestos free, of consistency required for application.

2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA AMP 500, "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.
- C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage where applicable, and securely anchored.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF UNDERLAYMENT

- A. Self-Adhering, High-Temperature Sheet Underlayment:
 - 1. Install self-adhering, high-temperature sheet underlayment; wrinkle free.
 - 2. Prime substrate if recommended by underlayment manufacturer.
 - 3. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures.
 - 4. Apply in shingle fashion to shed water, with end laps of not less than 6 inches (150 mm) staggered 24 inches (600 mm) between courses.
 - 5. Overlap side edges not less than 3-1/2 inches (90 mm). Roll laps and edges with roller.
 - 6. Roll laps and edges with roller.
 - 7. Cover underlayment within 14 days.
- B. Slip Sheet: Install slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.
 - 1. Install in shingle fashion to shed water.
 - 2. Lap joints not less than 4 inches (100 mm).

3.3 INSTALLATION, GENERAL

- A. Install roof specialties in accordance with manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, underlayments, sealants, and other miscellaneous items as required to complete roof-specialty systems.
 - 1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
 - 2. Provide uniform, neat seams with minimum exposure of solder and sealant.
 - 3. Install roof specialties to fit substrates and to result in weathertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.

4. Torch cutting of roof specialties is not permitted.
 5. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer's written installation instructions.
1. Coat concealed side of uncoated aluminum and stainless steel roof specialties with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 2. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.
- C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.
1. Space movement joints at a maximum of 12 ft. (3.6 m) with no joints within 18 inches (450 mm) of corners or intersections unless otherwise indicated on Drawings.
 2. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.
- D. Fastener Sizes: Use fasteners of sizes that penetrate substrate not less than recommended in writing by fastener manufacturer to achieve maximum pull-out resistance.
- E. Seal concealed joints with butyl sealant as required by roof specialty manufacturer.
- F. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F (4 deg C).
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches (38 mm); however, reduce pre-tinning where pre-tinned surface would show in completed Work. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
- H. Rivet for strength. Seal rivets watertight.

3.4 INSTALLATION OF COPINGS

- A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.
- B. Anchor copings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.
 1. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at spacing that meets performance requirements.

3.5 INSTALLATION OF REGLETS AND COUNTERFLASHINGS

- A. Coordinate installation of reglets and counterflashings with installation of base flashings.
- B. Surface-Mounted Reglets: Install reglets to receive flashings where flashing without embedded reglets is indicated on Drawings. Install at height so that inserted counterflashings overlap 4 inches (100 mm) over top edge of base flashings.
- C. Counterflashings: Insert counterflashings into reglets or other indicated receivers; ensure that counterflashings overlap 4 inches (100 mm) over top edge of base flashings. Lap counterflashing joints a minimum of 4 inches (100 mm) and bed with butyl sealant. Fit counterflashings tightly to base flashings.

3.6 CLEANING AND PROTECTION

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing in accordance with ASTM A780/A780M.
- B. Clean and neutralize flux materials. Clean off excess solder and sealants.
- C. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.
- D. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION

SECTION 077200 - ROOF ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Manufactured units for the following applications:
 - 1. Roof curbs.
 - 2. Equipment supports.
 - 3. Roof hatches.
 - 4. Pipe supports.
 - 5. Preformed flashing sleeves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of roof accessory.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For roof accessories.
 - 1. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
- C. Samples: For each type of roof accessory and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 - 1. Size and location of roof accessories specified in this Section.
 - 2. Method of attaching roof accessories to roof or building structure.
 - 3. Other roof-mounted items, including mechanical and electrical equipment, ductwork, piping, and conduit.
 - 4. Required clearances.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For roof accessories.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not store roof accessories in contact with other materials that might cause staining, denting, or other surface damage. Store roof accessories in accordance with manufacturer's instructions.
- B. Store materials off ground in dry location and in accordance with manufacturer's instructions in well-ventilated area.
- C. Store and protect roof accessories from nicks, scratches, and blemishes.

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify profiles and tolerances of roof-accessory substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.7 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof accessories to withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

2.2 ROOF CURBS

- A. Internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings, bearing continuously on roof structure, and capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, straight sides, and integrally formed deck-mounting flange at perimeter bottom.
- B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Curbs Plus, Inc.
 - 2. Greenheck Fan Corporation.
 - 3. LMCurbs.
 - 4. Pate Company (The).
 - 5. Roof Products, Inc.
 - 6. Thybar Corporation.
- C. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- D. Supported Load Capacity: coordinate load capacity with information on Shop Drawings of equipment to be supported.
- E. Stainless Steel: 0.0781 inch thick sheet.
 - 1. Finish: Manufacturer's standard.
- F. Construction:
 - 1. Curb Profile: Manufacturer's standard compatible with roofing system.
 - 2. Fabricate curbs to minimum height of 12 inches above roofing surface unless otherwise indicated.
 - 3. Top Surface: Level top of curb, with roof slope accommodated by sloping deck-mounting flange or by use of leveler frame.
 - 4. Insulation: Factory insulated with 1-1/2-inch- thick glass-fiber board insulation.
 - 5. Liner: Same material as curb, of manufacturer's standard thickness and finish.
 - 6. Nailer: Factory-installed wood nailer along top flange of curb, continuous around curb perimeter.
 - 7. Wind-Restraint Straps and Base Flange Attachment: Provide wind-restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb, of size and spacing required to comply with wind-uplift requirements.
 - 8. Platform Cap: Where portion of roof curb is not covered by equipment, provide weathertight platform cap formed from 3/4-inch- thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
 - 9. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as curb.

2.3 EQUIPMENT SUPPORTS

- A. Internally reinforced perimeter metal equipment supports capable of supporting superimposed live and dead loads between structural supports, including equipment loads and other construction indicated on Drawings, spanning between structural supports; capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, integral metal cant, and integrally formed structure-mounting flange at bottom.
- B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Curbs Plus, Inc.
 - 2. Greenheck Fan Corporation.
 - 3. J. L. Industries, Inc.; Activar Construction Products Group, Inc.
 - 4. LMCurbs.
 - 5. Pate Company (The).
 - 6. Roof Products, Inc.
 - 7. Thybar Corporation.
- C. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- D. Supported Load Capacity: Coordinate load capacity with information on Shop Drawings of equipment to be supported.
- E. Stainless Steel: 0.0781 inch thick sheet.
 - 1. Finish: Manufacturer's standard.
- F. Construction:
 - 1. Curb Profile: Profile as indicated on Drawings compatible with roofing system.
 - 2. Liner: Same material as equipment support, of manufacturer's standard thickness and finish.
 - 3. Nailer: Factory-installed continuous wood nailers 5-1/2 inches wide on top flange of equipment supports, continuous around support perimeter.
 - 4. Wind-Restraint Straps and Base Flange Attachment: Provide wind-restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb of size and spacing required to comply with wind-uplift requirements.
 - 5. Platform Cap: Where portion of equipment support is not covered by equipment, provide weathertight platform cap formed from 3/4-inch-thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
 - 6. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as equipment support.
 - 7. Fabricate equipment supports to minimum height of 12 inches above roofing surface unless otherwise indicated.

2.4 ROOF HATCHES

- A. Metal roof-hatch units with lids and insulated single-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, straight sides, and integrally formed deck-mounting flange at perimeter bottom.
- B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. ACUDOR Products, Inc.
 - 2. Babcock-Davis.
 - 3. BILCO Company (The).
 - 4. Dur-Red Products.
 - 5. J. L. Industries, Inc.; Activar Construction Products Group, Inc.

6. Milcor by Duravent; Duravent Group.
7. Nystrom, Inc.
8. O'Keeffe's Inc.
9. Pate Company (The).

C. Type and Size:

1. Single-leaf lid, At least 30 by 36 inches but not less than size indicated on Drawings..

D. Loads: Minimum 40 lbf/sq. ft. external live load and 20 lbf/sq. ft. internal uplift load.

E. Hatch Material, Stainless Steel:

1. Thickness: Manufacturer's standard thickness for hatch size indicated.
2. Finish: Manufacturer's standard.

F. Construction:

1. Insulation: 2-inch- thick, polyisocyanurate board.
2. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
3. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
4. Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
5. Fabricate curbs to minimum height of 12 inches above roofing surface unless otherwise indicated.

G. Hardware: Spring operators, hold-open arm, stainless steel spring latch with turn handles, stainless steel butt- or pintle-type hinge system, and padlock hasps inside and outside.

H. Ladder-Assist Post: Roof-hatch manufacturer's standard device for attachment to roof-access ladder.

1. Operation: Post locks in place on full extension; release mechanism returns post to closed position.
2. Height: 42 inches above finished roof deck.
3. Material: Stainless steel.
4. Post: 1-5/8-inch- diameter pipe.
5. Finish: Manufacturer's standard.
 - a. Color: As selected by Architect from manufacturer's full range.

2.5 PIPE SUPPORTS

A. Fixed-Height Strut-Type Pipe Supports: Comply with DSA IR 16-13; Recycled rubber, UV-resistant pipe stand with 14-gauge galvanized steel struts accommodating slotted channel inserts; for penetration-free installation over roof membrane type; as required for quantity of pipe runs and sizes, with load capacity up to 800 lbs. per foot. Height from roof surface to center of mass of supported component shall be less than 12 inches (actual product height is 4.8 inches). Lifetime warranty.

1. Basis-of-Design Product: Clearline Technologies Ltd., C-Port C-Series Channel Supports, or DSA-approved equal.

2.6 PREFORMED FLASHING SLEEVES

A. Exhaust Vent Flashing: Double-walled metal flashing sleeve or boot, insulation filled, with integral deck flange, 12 inches high, with removable metal hood and slotted or perforated metal collar.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Custom Solution Roof and Metal Products, a division of Colony Heating.
 - b. Menzies Metal Products.
 - c. Thaler Metal Industries Ltd.
2. Metal: Aluminum sheet, 0.063 inch thick.

3. Diameter: As indicated on Drawings.
4. Finish: Manufacturer's standard.

B. Vent Stack Flashing: Metal flashing sleeve, uninsulated, with integral deck flange.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Custom Solution Roof and Metal Products, a division of Colony Heating.
 - b. Menzies Metal Products.
 - c. Milcor by Duravent; Duravent Group.
 - d. Thaler Metal Industries Ltd.
2. Metal: Aluminum sheet, 0.063 inch thick.
3. Height: 13 inches.
4. Diameter: As indicated on Drawings.
5. Finish: Manufacturer's standard.

2.7 METAL MATERIALS

- A. Stainless Steel Sheet and Shapes: ASTM A240/A240M or ASTM A666, Type 304.

2.8 UNDERLAYMENT

- A. Self-Adhering, High-Temperature Sheet Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils thick, specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: Stable after testing at 240 deg F; ASTM D1970/D1970M.
2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F or lower; ASTM D1970/D1970M.
3. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ATAS International, Inc.
 - b. Carlisle WIP Products; a brand of Carlisle Construction Materials.
 - c. GCP Applied Technologies Inc.
 - d. Henry Company; a Carlisle company.
 - e. Palisade; Brand of Intertape Polymer Group (IPG).
 - f. Polyglass U.S.A., Inc.
 - g. Protecto Wrap Company.

- B. Slip Sheet: Rosin-sized building paper, 3 lb/100 sq. ft. minimum.

2.9 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Glass-Fiber Board Insulation: ASTM C726, nominal density of 3 lb/cu. ft., thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F, thickness as indicated.
- C. Polyisocyanurate Board Insulation: ASTM C1289, thickness and thermal resistivity as indicated.
- D. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPA C2; not less than 1-1/2 inches thick.

- E. Fasteners: Roof accessory manufacturer's recommended fasteners, designed to comply with performance requirements, suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
 - 1. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
- F. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.
- G. Elastomeric Sealant: ASTM C920, elastomeric silicone polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.
- H. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.
- I. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- J. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.

2.10 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA AMP 500, "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- C. Verify dimensions of roof openings for roof accessories.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF UNDERLAYMENT

- A. Self-Adhering, High-Temperature Sheet Underlayment:
 - 1. Install self-adhering, high-temperature sheet underlayment; wrinkle free.
 - 2. Prime substrate if recommended by underlayment manufacturer.
 - 3. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures.
 - 4. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses.

5. Overlap side edges not less than 3-1/2 inches. Roll laps and edges with roller.
6. Roll laps and edges with roller.
7. Cover underlayment within 14 days.

B. Slip Sheet: Install slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.

1. Install in shingle fashion to shed water.
2. Lapp joints not less than 4 inches.

3.3 INSTALLATION, GENERAL

A. Install roof accessories in accordance with manufacturer's written instructions.

1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended in writing by manufacturer's written installation instructions.

1. Coat concealed side of uncoated aluminum and stainless steel roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof accessories for waterproof performance.

3.4 INSTALLATION OF ROOF ACCESSORIES

A. Roof Curb: Install each roof curb so top surface is level.

1. Attach curbs to wood nailer on roof deck with wood screws.
2. Weld curbs to metal roof deck.
3. Bolt curbs to concrete roof deck with lead shield expansion type inserts through each pre-drilled hole with 3/8 inch corrosion resistant steel bolts.
4. Anchor counter-flashing to wood nailer with lag screws and lead washers.

B. Equipment Support: Install equipment supports so top surfaces are level with each other.

C. Roof-Hatch:

1. Install roof hatch so top surface of hatch curb is level.
 - a. Attach curbs to wood nailer on roof deck with wood screws.
 - b. Weld curbs to metal roof deck.
 - c. Bolt curbs to concrete roof deck with lead shield expansion type inserts through each pre-drilled hole with 3/8 inch corrosion resistant steel bolts.
2. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
3. Attach safety railing system to roof-hatch curb.
4. Attach ladder-assist post in accordance with manufacturer's written instructions.

D. Pipe Support: Comply with MSS SP-58 and DSA IR 16-13 . Install supports and attachments as required to properly support piping. Arrange for grouping of parallel runs of horizontal piping, and support together. Install each support unit over 12 inch square cut of roof walk pad at a minimum of 6'-0" on center and at each change in direction of piping.

1. Pipes of Various Sizes: Space supports for smallest pipe size or install intermediate supports for smaller-diameter pipes as specified for individual pipe hangers.
- E. Preformed Flashing-Sleeve and Flashing-Pipe Portal: Secure flashing sleeve to roof membrane in accordance with flashing-sleeve manufacturer's written instructions; flash sleeve flange to surrounding roof membrane in accordance with roof membrane manufacturer's instructions.
- F. Seal joints with elastomeric or butyl sealant as required by roof accessory manufacturer.

3.5 CLEANING AND PROTECTION

- A. On completion of installation, clean exposed surfaces in according with manufacturer's written instructions. Clean off excess sealants.
- B. Remove temporary protective coverings and strippable films as roof accessories are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof accessories in a clean condition during construction.
- C. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION 077200

SECTION 078413 - PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Penetrations in fire-resistance-rated walls.
 - 2. Penetrations in horizontal assemblies.
 - 3. Penetrations in smoke barriers.
- B. Related Requirements:
 - 1. Section 078443 "Joint Firestopping" for joints in or between fire-resistance-rated construction, at exterior curtain-wall/floor intersections, and in smoke barriers.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's standard detail sheets indicating approved classification listings by one of the testing agencies indicated below.
- B. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency. Coordinate actual details with manufacturer's standard details.
 - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Repair and replacement instructions for penetration firestopping.
- B. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations.
- C. Product Schedule: Final schedule indicating installer contact information, product information, firestopping hourly rating, firestopping locations and design designations used.
- D. Inspection Reports: Include inspection compliance reports from governing authorities and project inspectors, and approvals of any Engineering Judgments required by field conditions.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

1. A firm experienced in installing penetration firestopping similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.
- B. Installation Responsibility: Assign installation of penetration firestopping and fire-resistive joint systems to a single qualified firestop contractor. Coordinate products with any products installed by individual trades as specified in other Sections.
- C. Provide the following upon request:
 1. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for penetration firestopping.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install penetration firestopping when ambient or substrate temperatures are outside limits permitted by penetration firestopping manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.
- B. Install and cure penetration firestopping per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.8 COORDINATION

- A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping is installed according to specified requirements.
- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping.
- C. Notify Owner's testing agency at least seven days in advance of penetration firestopping installations; confirm dates and times on day preceding each series of installations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:
 1. Penetration firestopping tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
 2. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems complying with the following requirements:
 - a. Penetration firestopping products bear classification marking of qualified testing and inspecting agency.
 - b. Classification markings on penetration firestopping correspond to designations listed by the following:
 - 1) UL in its "Fire Resistance Directory."
 - 2) Intertek ETL SEMKO in its "Directory of Listed Building Products."
 - 3) FM Global in its "Building Materials Approval Guide."

2.2 MANUFACTURERS

- A. Single Source: Provide products from single manufacturer, except as noted.
- B. Manufacturers: Subject to compliance with requirements, provide penetration firestopping products by the following in coordination with authorized testing agency classification listings indicated on Drawings or as required for complete installation:
 - 1. Hilti, Inc., or comparable by one of the following:
 - a. 3M Fire Protection Products.
 - b. Specified Technologies Inc.
 - c. Tremco, Inc.; Tremco Fire Protection Systems Group.
 - 2. If one of the comparable manufacturers is selected, it will be the contractor's responsibility to coordinate equal classification listings and/or Engineering Judgments for assemblies and details with the governing authority and any inspectors assigned to the Project.

2.3 PENETRATION FIRESTOPPING SYSTEMS

- A. Penetration Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any. Provide additional component systems as may be required by manufacturers to satisfy compatibility requirement.
- B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
 - 1. Fire-resistance-rated walls include fire walls, fire-barrier walls, and fire partitions.
 - 2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.
- C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
 - 1. Horizontal assemblies include floors, floor/ceiling assemblies, and ceiling membranes of roof/ceiling assemblies.
 - 2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
 - 3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
- D. W-Rating: Provide penetration firestopping showing no evidence of water leakage when tested according to UL 1479.
- E. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.
- F. VOC Content: Penetration firestopping sealants and sealant primers shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Sealants: 250 g/L.
 - 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 - 3. Sealant Primers for Porous Substrates: 775 g/L.
- G. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.
 - 1. Permanent forming/damming/backing materials, including the following:

- a. Slag-wool-fiber or rock-wool-fiber insulation.
 - b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
 - c. Fire-rated form board.
 - d. Fillers for sealants.
2. Temporary forming materials.
 3. Substrate primers.
 4. Collars.
 5. Steel sleeves.

2.4 FILL MATERIALS

- A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.
- C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.
- E. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.
- F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
- G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.
- I. Firestop Putty Pads for Electrical Boxes: Listed intumescent moldable firestop putty pads. Product: Subject to compliance with requirements, provide one of the following:
 1. Hilti Corporation; CP 617 6" x 7" Putty Pad or CP 617L 7" x 7" Putty Pad.
 2. Kinetics Noise Control; IsoBacker.
 3. Specified Technologies Inc. (STI); SpecSeal Series SSP Putty Pad.
- J. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- K. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
 1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and sloped surfaces, unless indicated firestopping limits use of nonsag grade for both opening conditions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Before installing penetration firestopping systems, clean out openings immediately to comply with manufacturer's written instructions and with the following requirements:
 - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping materials.
 - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping materials. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.

3.3 INSTALLATION

- A. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.
- B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.
- C. Install fill materials by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
 - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

- A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches high and with minimum 0.375-inch strokes.
 - 1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet from end of wall and at intervals not exceeding 30 feet.
- B. Identify penetration firestopping with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of firestopping edge so labels will be visible to anyone seeking to remove penetrating items or firestopping. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:

1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing and inspecting agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.5 FIELD QUALITY CONTROL

- A. Inspecting Agency: University will engage a qualified testing agency to perform tests and inspections according to ASTM E2174. Inspections shall comply with CBC Section 1705.17, and CBC Section 1705.18 as applicable.
1. Inspect completed firestop installation in accordance with ASTM E2174. Perform destructive testing as deemed necessary, and in accordance with ASTM E2174 to verify installation meets the requirements of the UL Listing.

3.6 CLEANING AND PROTECTION

- A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.7 PENETRATION FIRESTOPPING SCHEDULE

- A. General: Refer to Drawings for fire rated assemblies.
1. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.
 2. Where Intertek Group-listed systems are indicated, they refer to design numbers in Intertek Group's "Directory of Listed Building Products" under "Firestop Systems."
 3. Where FM Approval-approved systems are indicated, they refer to design numbers listed in FM Approval's "Approval Guide" under "Wall and Floor Penetration Fire Stops."
- B. Firestopping at fire rated openings for conduit and cable trays:
1. Through Penetration Firestopping of Fire Rated Assemblies: ASTM E814 with 0.10 inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings not less than 1-hour.
 - a. Wall Penetrations: Fire F-Ratings not less than 1-hour.
 - b. Floor Penetrations: Fire F-Ratings and temperature T-Ratings not less than 1-hour.
 2. Through Penetration Firestopping of Non-Fire Rated Floor Assemblies: Materials to resist free passage of flame and products of combustion.
 - a. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
 - b. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

END OF SECTION

SECTION 078443 - JOINT FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Joints at exterior curtain-wall/floor intersections.
 - 2. Joints in smoke barriers.
- B. Related Requirements:
 - 1. Section 078413 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers and for wall identification.
 - 2. Section 092216 "Non-Structural Metal Framing" for firestop tracks for metal-framed partition heads.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's standard detail sheets indicating approved classification listings by one of the testing agencies indicated below.
- B. Product Schedule: For each joint firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing agency.
 - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.

1.4 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that joint firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.
- B. Product Schedule: Final schedule indicating installer contact information, product information, firestopping hourly rating, firestopping locations and design designations used.
- C. Inspection Reports: Include inspection compliance reports from governing authorities and project inspectors, and approvals of any Engineering Judgments required by field conditions.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that has been approved by FM Approvals according to FM Approvals 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."
 - 1. A firm experienced in installing joint firestopping similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its joint firestopping products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

- B. Installation Responsibility: Assign installation of joint firestopping systems and penetration firestopping to a single qualified firestop contractor. Coordinate products with any products installed by individual trades as specified in other Sections.
- C. Provide the following upon request:
 - 1. Product Test Reports: For each joint firestopping system, for tests performed by a qualified testing agency.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install joint firestopping systems when ambient or substrate temperatures are outside limits permitted by joint firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Install and cure joint firestopping systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.7 COORDINATION

- A. Coordinate construction of joints to ensure that joint firestopping systems can be installed according to specified firestopping system design.
- B. Coordinate sizing of joints to accommodate joint firestopping systems.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics:
 - 1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
 - 2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:
 - a. Joint firestopping systems shall bear classification marking of a qualified testing agency.
 - 1) UL in its "Fire Resistance Directory."
 - 2) Intertek Group in its "Directory of Listed Building Products."

2.2 MANUFACTURERS

- A. Single Source: Provide products from single manufacturer, except as noted.
- B. Manufacturers: Subject to compliance with requirements, provide joint firestopping products by the following in coordination with authorized testing agency classification listings indicated on Drawings or as required for complete installation:
 - 1. Hilti, Inc., or comparable by one of the following:
 - a. 3M Fire Protection Products.
 - b. Specified Technologies, Inc.
 - c. Thermafiber, Inc.; an Owens Corning company.
 - d. Tremco, Inc. Specified Technologies Inc.
 - 2. If one of the comparable manufacturers is selected, it will be the contractor's responsibility to coordinate equal classification listings and/or Engineering Judgments for assemblies and details with the governing authority and any inspectors assigned to the Project.

2.3 JOINT FIRESTOPPING SYSTEMS

- A. Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
- B. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined per ASTM E 1966 or UL 2079.
 - 1. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.
- C. Joints at Exterior Curtain-Wall/Floor Intersections: Provide joint firestopping systems with rating determined per ASTM E 2307.
 - 1. F-Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.
- D. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079 based on testing at a positive pressure differential of 0.30-inch wg .
 - 1. L-Rating: Not exceeding 5.0 cfm/ft. of joint at both ambient and elevated temperatures.
- E. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.
 - 1. Sealant shall have a VOC content of 250 g/L or less.
 - 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Before installing joint firestopping systems, clean joints immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
 - 1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of elastomeric fill materials or compromise fire-resistive rating.
 - 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with elastomeric fill materials. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.

- B. Prime substrates where recommended in writing by joint firestopping system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

3.3 INSTALLATION

- A. General: Install joint firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- C. Install elastomeric fill materials for joint firestopping systems by proven techniques to produce the following results:
 - 1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
 - 3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

- A. Joint Identification: Identify joint firestopping systems with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of joint edge so labels are visible to anyone seeking to remove or joint firestopping system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
 - 1. The words "Warning - Joint Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
 - 2. Contractor's name, address, and phone number.
 - 3. Designation of applicable testing agency.
 - 4. Date of installation.
 - 5. Manufacturer's name.
 - 6. Installer's name.
- B. Inspecting Agency: University will engage a qualified testing agency to perform tests and inspections according to ASTM E 2393. Inspections shall comply with CBC Section 1705.17, and CBC Section 1705.18 as applicable.
 - 1. Inspect completed firestop installation in accordance with ASTM E2393. Perform destructive testing as necessary, and in accordance with ASTM E393 to verify installation meets the requirements of the UL Listing.
- C. Where deficiencies are found or joint firestopping systems are damaged or removed due to testing, repair or replace joint firestopping systems so they comply with requirements.

3.5 CLEANING AND PROTECTION

- A. Clean off excess elastomeric fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by joint firestopping system manufacturers and that do not damage materials in which joints occur.

- B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated joint firestopping systems immediately and install new materials to produce joint firestopping systems complying with specified requirements.

3.6 JOINT FIRESTOPPING SYSTEM SCHEDULE

- A. General: Refer to Drawings for fire rated assemblies.
 - 1. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHBN or Category XHDG.
 - 2. Where Intertek Group-listed systems are indicated, they refer to design numbers in Intertek Group's "Directory of Listed Building Products" under product category Firestop Systems.

END OF SECTION

SECTION 079200 - JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Silicone joint sealants.
2. Urethane joint sealants.
3. Latex joint sealants.
4. Mildew-resistant joint sealants.
5. Joint sealant backing.

B. Related Requirements:

1. Section 072726 "Fluid-Applied Membrane Air Barriers" for sealants associated with weather barriers.
2. Section 076200 "Sheet Metal Flashing and Trim;" for joints sealants and butyl sealant tape used in conjunction with sheet metal fabrications and metal flashing.
3. Section 078443 "Joint Firestopping" for sealing joints in fire-resistance-rated construction.
4. Section 079219 "Acoustical Joint Sealants" for joint sealants used in sound-rated assemblies.
5. Section 088000 "Glazing" for glazing sealants.
6. Section 092900 "Gypsum Board" for sealing perimeter joints.
7. Section 093000 "Tiling" for sealing tile joints.
8. Section 095100 "Suspended Acoustical Ceilings" for sealing edge moldings at perimeters with acoustical sealant.

1.2 PRECONSTRUCTION TESTING

A. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.

1. Use ASTM C 1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
2. Submit not fewer than eight pieces of each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.
5. Testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:

1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
2. Conduct field tests for each application indicated below:
 - a. Each kind of sealant and joint substrate indicated.
3. Notify Architect seven days in advance of dates and times when test joints will be erected.
4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
 - a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - 1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.3 ACTION SUBMITTALS

- A. Product Data: For each joint-sealant product indicated, unless otherwise indicated.
- B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
- C. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- wide joints formed between two 6-inch- long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- D. Joint-Sealant Schedule: Include the following information:
 1. Joint-sealant application, joint location, and designation.
 2. Joint-sealant manufacturer and product name.
 3. Joint-sealant formulation.
 4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

- A. Preconstruction Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:
 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- B. Preconstruction Field-Adhesion Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.
- C. Field-Adhesion Test Reports: For each sealant application tested.
- D. Sealant, Waterproofing, and Restoration Institute (SWRI) Validation Certificate: For each sealant specified to be validated by SWRI's Sealant Validation Program.
 1. If SWRI validation certificates cannot be obtained for sealants specified and substrates sealants will be adhered to, provide test reports by third party testing agency showing compliance.
- E. Sample warranties.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.
- C. Product Testing: Test joint sealants using a qualified testing agency.

1. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
 2. Test according to SWRI's Sealant Validation Program for compliance with requirements specified by reference to ASTM C 920 for adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.
- D. Mockups: Install sealants in mockups of assemblies specified in other Sections that are indicated to receive sealants specified in this Section. Use materials and installation methods specified in this Section.
- E. Provide the following upon request:
1. Qualification Data: For qualified Installer and testing agency.
 2. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.
 3. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements. Provide if requested and if SWRI certificates are not available.

1.6 PROJECT CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.7 WARRANTY

- A. Special Installer's Warranty: Installer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: Five years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer's standard form in which joint-sealant manufacturer agrees to furnish joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period, Polyurethane: Five years from date of Substantial Completion.
 2. Warranty Period, Silicone: Twenty years from date of Substantial Completion.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 2. Disintegration of joint substrates from natural causes exceeding design specifications.
 3. Mechanical damage caused by individuals, tools, or other outside agents.
 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. VOC Content of Interior Sealants: Sealants and sealant primers used inside the weatherproofing system shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Architectural Sealants: 250 g/L.
 - 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 - 3. Sealant Primers for Porous Substrates: 775 g/L.
- C. Liquid-Applied Joint Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
 - 1. Suitability for Immersion in Liquids. Where sealants are indicated for Use I for joints that will be continuously immersed in liquids, provide products that have undergone testing according to ASTM C 1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.
- D. Stain-Test-Response Characteristics: Where sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.
- E. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.
- F. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.2 SILICONE JOINT SEALANTS

- A. Sealant JS-S1 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following products that has a validation certificate from the Sealant, Waterproofing and Restoration Institute (SWRI).
 - a. Dowsil 791
 - b. Dowsil 795
 - c. Momentive Silpruf SCS2000
 - d. Tremco Spectrum 2
- B. Sealant JS-S2 - Single-Component, Nonsag, Non-Staining, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following products that has a validation certificate from the Sealant, Waterproofing and Restoration Institute (SWRI).
 - a. Dowsil 756 SMS
 - b. Momentive Silpruf NB SCS 9000
 - c. Tremco Spectrum 3
- C. Sealant JS-S3 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.

1. Products: Subject to compliance with requirements, provide on of the following products that has a validation certificate from the Sealant, Waterproofing and Restoration Institute (SWRI).
 - a. Dowsil 790
 - b. Momentive Silpruf LM SCS2700
 - c. Tremco Spectrum 1

2.3 WEATHER BARRIER SEALANTS

- A. Sealant JS-W1 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT; tested and marketed specifically for sealing air barrier and vapor retarder sheets to common building materials, such as aluminum, vinyl, PVC, powder coat, paint and fluoropolymer coatings; UV resistant..
 1. Products: Subject to compliance with requirements, provide the following:
 - a. Dowsil 758.

2.4 URETHANE JOINT SEALANTS

- A. Sealant JS-U1 - Multicomponent, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920. Type M, Grade P, Class 25, for Use T and I.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. LymTal International, Inc.; Iso-Flex 880 GB.
 - b. May National Associates, Inc.; Bondaflex PUR 2 SL.
 - c. Tremco Incorporated; Vulkem 445SSL or Vulkem 45SSL.
- B. Sealant JS-U2 - Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; MasterSeal NP 2.
 - b. LymTal International, Inc.; Iso-Flex 881 or Iso-Flex 885 SG.
 - c. May National Associates, Inc.; Bondaflex PUR 2 NS.
 - d. Pecora Corporation; Dynatred.
 - e. Sika Corporation, Construction Products Division; Sikaflex - 2c NS or Sikaflex - 2c EZ Mix.
 - f. Tremco Incorporated; Vulkem 227.

2.5 LATEX JOINT SEALANTS

- A. Sealant JS-L1 - Latex Joint Sealant: Acrylic latex or siliconized acrylic latex, ASTM C 834.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolac.
 - b. Bostik, Inc.; Chem-Calk 600.
 - c. DAP Products Inc.; ALEX Ultra 230.
 - d. May National Associates, Inc.; Bondaflex 600 or Bondaflex Sil-A 700.
 - e. Pecora Corporation; AC-20 + Silicone.
 - f. Tremco Incorporated; Tremflex 834.

2.6 BUTYL RUBBER BASED JOINT SEALANTS

- A. Sealant JS-B1 - Butyl-Rubber-Based Joint Sealant: ASTM C 1311.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; Chem-Calk 300.
 - b. Pecora Corporation; BC-158.
 - c. Tremco Incorporated; Tremco Butyl Sealant.

2.7 MILDEW-RESISTANT JOINT SEALANTS

- A. Sealant JS-M1 - Mildew-Resistant, Single-Component, Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniplus.
 - b. Dow Corning Corporation; 786 Mildew Resistant.
 - c. GE Advanced Materials - Silicones; Sanitary SCS1700.
 - d. May National Associates, Inc.; Bondaflex Sil 100 WF.
 - e. Pecora Corporation; 898.
 - f. Tremco Incorporated; Tremsil 200 Sanitary.

2.8 ACOUSTICAL JOINT SEALANTS

- A. Specified in Section 079219 "Acoustical Joint Sealants."

2.9 JOINT SEALANT BACKING

- A. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) Type O (open-cell material) Type B (bicellular material with a surface skin) or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.10 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry.
 - c. Unglazed surfaces of ceramic tile.
 3. Remove laitance and form-release agents from concrete.
 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Do not extend exterior sealants and primers into building interior (that is, inside the weatherproofing system) unless first verifying compliance with VOC requirements.
- D. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 1. Do not leave gaps between ends of sealant backings.
 2. Do not stretch, twist, puncture, or tear sealant backings.
 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- E. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

- F. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
 - 1. Place sealants so they directly contact and fully wet joint substrates.
 - 2. Completely fill recesses in each joint configuration.
 - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

- G. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
 - 1. Remove excess sealant from surfaces adjacent to joints.
 - 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces. Water-based tooling agents are unacceptable.
 - 3. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.

3.4 FIELD QUALITY CONTROL

- A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
 - 1. Extent of Testing: Test completed and cured sealant joints as follows:
 - a. Perform 10 tests for the first 1000 feet of joint length for each kind of sealant and joint substrate.
 - b. Perform 1 test for each 1000 feet of joint length thereafter or 1 test per each floor per elevation.
 - 2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 - 3. Inspect tested joints and report on the following:
 - a. Whether sealants filled joint cavities and are free of voids.
 - b. Whether sealant dimensions and configurations comply with specified requirements.
 - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
 - 4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
 - 5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

- B. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces; Type JS-U1 or JS-U2.
1. Joint Locations:
 - a. Isolation and contraction joints in cast-in-place concrete slabs.
 - b. Joints between different materials listed above.
- B. Joint-Sealant Application: Exterior joints in vertical surfaces and exterior horizontal nontraffic surfaces; .
1. Joint Locations:
 - a. Control and expansion joints in unit masonry: JS-S2
 - b. Joints between metal panels: JS-S1 or JS-S2
 - c. Joints between different materials listed above: JS-S2
 - d. Perimeter joints between materials listed above and frames of exterior openings: JS-S2, JS-S3 where required for additional movement. JS-S1 is acceptable only if materials adjacent to aluminum framing are non-staining.
 - e. Control and expansion joints in overhead surfaces: JS-S2.
- C. Joint-Sealant Application: Exterior weather barrier joints; Type JS-S1, JS-S2, JS-S3, or JS-W1.
- D. Joint-Sealant Application: Interior joints in horizontal traffic surfaces; Type JS-U1 or JS-U2.
1. Joint Locations:
 - a. Isolation joints in cast-in-place concrete slabs.
 - b. Control and expansion joints in tile flooring, except in wet areas.
 - c. Other joints as indicated.
- E. Joint-Sealant Application: Interior joints in vertical surfaces and interior horizontal nontraffic surfaces; Type JS-L1.
1. Joint Locations:
 - a. Control and expansion joints on exposed interior surfaces of exterior walls.
 - b. Perimeter joints of exterior openings where indicated.
 - c. Vertical joints on exposed surfaces of walls and partitions.
 - d. Perimeter joints between interior wall surfaces and frames of interior openings .
 - e. Other joints as indicated.
- F. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces; Type JS-M1.
1. Joint Sealant Location:
 - a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
 - b. Tile control and expansion joints in wet areas and where indicated.
 - c. Other joints as indicated.
- G. Joint Sealant Application: Joints in sound-rated assemblies.
1. Comply with Section 079219 "Acoustical Joint Sealants."

END OF SECTION

SECTION 079219 - ACOUSTICAL JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes acoustical joint sealants.
- B. Related Requirements:
 - 1. Section 079200 "Joint Sealants" for elastomeric, latex, and butyl-rubber-based joint sealants for nonacoustical applications.

1.2 DEFINITION

- A. Acoustic Joint Sealant: "Acoustic Joint Sealant or Spray: Material or combination of materials used to achieve specified acoustical rating of non-fire-rated assembly by providing an effective barrier against sound transmission through construction joint and through penetration openings."

1.3 ACTION SUBMITTALS

- A. Product Data: For each acoustical joint sealant.
- B. Samples for Verification: For each kind and color of acoustical joint sealant required, provide Samples with joint sealants in 1/2-inch- wide joints formed between two 6-inch- long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- C. Acoustical-Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation.
 - 4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

- A. Provide the following upon request:
 - 1. Product Test Reports: For each kind of acoustical joint sealant, for tests performed by a qualified testing agency.

1.5 WARRANTY

- A. Special Installer's Warranty: Installer agrees to repair or replace acoustical joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 - 1. Warranty Period: Two years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer agrees to furnish acoustical joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Provide acoustical joint-sealant products that effectively reduce airborne sound transmission through perimeter joints and openings in building construction, as demonstrated by testing representative assemblies according to ASTM E 90.
1. Sealant shall have a VOC content of 250 g/L or less.
 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 ACOUSTICAL JOINT SEALANTS

- A. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex acoustical sealant complying with ASTM C 834.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Accumetric LLC; BOSS 826 Acoustical Sound Sealant.
 - b. GE Construction Sealants; RCS20 Acoustical.
 - c. Tremco, Incorporated; Tremco Acoustical Sealant.
 - d. USG Corporation; SHEETROCK Acoustical Sealant.
 2. Colors of Exposed Acoustical Joint Sealants: As selected by Architect from manufacturer's full range of colors.
- B. Sprayed Sound Seal: Paintable acrylic latex spray designed for static or minimally dynamic linear joints or gaps in non rated barriers where indicated on Drawings.
1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
 - a. Specified Technologies, Inc. (STI Firestop); SpecSeal SNS Smoke 'N' Sound Spray, or equal by one of the following:
 - 1) Tremco Incorporated
 - 2) RectorSeal LLC
 - 3) Or equal.
 2. Fire-Resistance: ASTM E 84, Class A
 3. Wet Film Thickness: Not less than 1/4 inch, unless otherwise directed by manufacturer to suit conditions.
 4. Air Leakage: UL2079 or UL1479; Not more than 1.0 cfm
 5. STC Rating: ASTM E 90; Not less than 59.

2.3 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by acoustical-joint-sealant manufacturer where required for adhesion of sealant to joint substrates.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive acoustical joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing acoustical joint sealants to comply with joint-sealant manufacturer's written instructions.
- B. Joint Priming: Prime joint substrates where recommended by acoustical-joint-sealant manufacturer. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF ACOUSTICAL JOINT SEALANTS

- A. Comply with acoustical joint-sealant manufacturer's written installation instructions unless more stringent requirements apply.
- B. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical joint sealant or spray sealant to suit conditions. Install acoustical joint sealants at both faces of partitions, at perimeters, and through penetrations. Comply with ASTM C 919, ASTM C 1193, and manufacturer's written recommendations for closing off sound-flanking paths around or through assemblies, including sealing partitions to underside of floor slabs above acoustical ceilings.
- C. Acoustical Ceiling Areas: Apply acoustical joint sealant at perimeter edge moldings of acoustical ceiling areas in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

3.4 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of acoustical joint sealants and of products in which joints occur.

3.5 PROTECTION

- A. Protect acoustical joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated acoustical joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes hollow-metal work.
- B. Related Requirements:
 - 1. Section 087100 "Door Hardware" for door hardware for hollow-metal doors.
 - 2. Division 08 Sections for "Glazing" for glass installed in hollow-metal doors and frames.
 - 3. Section 099600 "High-Performance Coatings" for painting of hollow metal doors and frames.

1.2 DEFINITIONS

- A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.3 COORDINATION

- A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, core descriptions, fire-resistance ratings, and finishes.
- B. Shop Drawings: Include the following:
 - 1. Elevations of each door type.
 - 2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
 - 3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
 - 4. Locations of reinforcement and preparations for hardware.
 - 5. Details of each different wall opening condition.
 - 6. Details of anchorages, joints, field splices, and connections.
 - 7. Details of accessories.
 - 8. Details of moldings, removable stops, and glazing.
 - 9. Details of conduit and preparations for power, signal, and control systems.
- C. Samples for Verification:
 - 1. For "Doors" and "Frames" subparagraphs below, prepare Samples approximately 8 by 10 inches to demonstrate compliance with requirements for quality of materials and construction:
 - a. Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.
 - b. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.
- D. Schedule: Provide a schedule of hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.

1.5 QUALITY ASSURANCE

- A. Provide the following upon request.
 - 1. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.
 - 2. Oversize Construction Certification: For assemblies required to be fire rated and exceeding limitations of labeled assemblies.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
 - 1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch- high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Ceco Door; ASSA ABLOY.
 - 2. Concept Frames, Inc.
 - 3. Curries Company; ASSA ABLOY.
 - 4. Custom Metal Products.
 - 5. Hollow Metal Xpress.
 - 6. Republic Doors and Frames.
 - 7. Steelcraft; an Allegion brand.
- B. Source Limitations: Obtain hollow-metal work from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings and temperature-rise limits indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 - 1. Smoke- and Draft-Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 without artificial bottom seal, and installed in compliance with NFPA 105.
 - 2. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, and elsewhere when required by governing code, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
- B. Thermally Rated Door Assemblies: Provide exterior door assemblies with U-factor of not more than 0.38 deg Btu/F x h x sq. ft. when tested in accordance with ASTM C1363 or ASTM E1423.

- C. Air Infiltration: Provide exterior door and frame assemblies with the following air leakage limitations when tested in accordance with ASTM E283:
 - 1. Fixed Glazing and Framing Areas: Air leakage for the system of not more than 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft..
 - 2. Entrance Doors: Air leakage of not more than 1.0 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft..

2.3 INTERIOR HOLLOW-METAL DOORS AND FRAMES

- A. Construct interior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Heavy-Duty Doors: SDI A250.8, Level 2. At interior locations.
 - 1. Physical Performance: Level B according to SDI A250.4.
 - 2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: 1-3/4 inches.
 - c. Face: Uncoated, cold-rolled steel sheet, minimum thickness of 0.042 inch.
 - d. Edge Construction: Model 2, Seamless.
 - e. Core: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polyisocyanurate, mineral-board, or vertical steel-stiffener core at manufacturer's discretion.
 - 3. Exposed Finish: Shop prime and paint.

2.4 EXTERIOR HOLLOW-METAL DOORS AND FRAMES

- A. Construct exterior doors and frames to comply with the standards as modified and indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Extra-Heavy-Duty Doors and Frames: SDI A250.8, Level 3. At exterior locations.
 - 1. Physical Performance: Level A according to SDI A250.4. Provide exterior doors and frames with a maximum air leakage of 0.3 CFM/SF when tested at 6.24 psf pressure differential based on energy code requirements as tested according to ASTM E283.
 - 2. Thermal Characteristics: Provide exterior doors and frames to meet Performance Requirements, with or without thermal break.
 - 3. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: 1-3/4 inches
 - c. Face: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum A40 coating.
 - d. Edge Construction: Model 2, Seamless.
 - e. Core: Polystyrene, Polyurethane, or Polyisocyanurate.
 - 1) Thermal-Rated Doors: Provide doors fabricated with thermal-resistance value (R-value) of not less than 2.1 deg F x h x sq. ft./Btu when tested according to ASTM C 1363.
 - 4. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of 0.067 inch, with minimum A60 coating.
 - b. Construction: Full profile welded.
 - 5. Exposed Finish: Shop prime and paint.

2.5 FRAME ANCHORS

- A. Jamb Anchors:
 - 1. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch thick.
 - 2. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch- diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
- B. Floor Anchors: Formed from same material as frames, minimum thickness of 0.042 inch, and as follows:
 - 1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.

2.6 MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B.
- E. Frame Anchors: ASTM A 879/A 879M, Commercial Steel (CS), 04Z coating designation; mill phosphatized.
 - 1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, hot-dip galvanized according to ASTM A 153/A 153M, Class B.
- F. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.
- G. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.
- H. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.
- I. Glazing: Comply with requirements in Section 088000 "Glazing" and Section 088813 "Fire-Resistant Glazing and Framing."
- J. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.7 ACCESSORIES

- A. Louvers: Provide louvers for interior doors, where indicated, which comply with SDI 111C, with blades or baffles formed of 0.020-inch- thick, cold-rolled steel sheet set into 0.032-inch- thick steel frame. Verify with Door Schedule on Drawings.
 - 1. Sightproof Louver, as occurs: Stationary louvers constructed with inverted-V or inverted-Y blades.

2. Fire-Rated Automatic Louvers, as occurs: Louvers constructed with movable blades closed by actuating fusible link, and listed and labeled for use in fire-rated door assemblies of type and fire-resistance rating indicated by same qualified testing and inspecting agency that established fire-resistance rating of door assembly.

2.8 FABRICATION

- A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Hollow-Metal Doors:
 1. Steel-Stiffened Door Cores: Provide minimum thickness 0.026 inch, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches apart. Spot weld to face sheets no more than 5 inches o.c. Fill spaces between stiffeners with glass- or mineral-fiber insulation.
 2. Fire Door Cores: As required to provide fire-protection ratings indicated.
 3. Vertical Edges for Single-Acting Doors: Provide beveled or square edges at manufacturer's discretion.
 4. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets.
 5. Bottom Edge Closures: Close bottom edges of doors with end closures or channels of same material as face sheets.
 6. Exterior Doors: Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
 7. Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.
- C. Hollow-Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
 1. Sidelite and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 3. Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.
 4. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Stud-Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Three anchors per jamb up to 60 inches high.
 - 2) Four anchors per jamb from 60 to 90 inches high.
 - 3) Five anchors per jamb from 90 to 96 inches high.
 - 4) Five anchors per jamb plus one additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
 - b. Compression Type: Not less than two anchors in each frame.
 - c. Postinstalled Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches o.c.
 5. Head Anchors: Two anchors per head for frames more than 42 inches wide and mounted in metal-stud partitions.
 6. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.

- b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
- 7. Terminated Stops: Terminate stops 6 inches above finish floor with a 90-degree angle cut, and close open end of stop with steel sheet closure. Cover opening in extension of frame with welded-steel filler plate, with welds ground smooth and flush with frame.
- D. Fabricate concealed stiffeners and edge channels from either cold- or hot-rolled steel sheet.
- E. Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.
 - 1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
 - 2. Comply with applicable requirements in SDI A250.6 and BHMA A156.115 for preparation of hollow-metal work for hardware.
- F. Stops and Moldings: Provide stops and moldings around glazed lites and louvers where indicated. Form corners of stops and moldings with mitered hairline joints.
 - 1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow-metal work. Grind smooth.
 - 2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
 - 3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
 - 4. Provide loose stops and moldings on inside of hollow-metal work.
 - 5. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.
 - 6. Provide fire-rated assembly where indicated.

2.9 STEEL FINISHES

- A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.
 - 1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and topcoats regardless of prolonged exposure.
- B. Paint doors and frames according to Section 099600 "High-Performance Coatings."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

- B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

- A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer's written instructions.
- B. Hollow-Metal Frames: Install hollow-metal frames for doors, transoms, sidelites, borrowed lites, and other openings, of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-rated openings, install frames according to NFPA 80.
 - b. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - c. Install frames with removable stops located on secure side of opening.
 - d. Install door silencers in frames before grouting.
 - e. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - f. Check plumb, square, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
 - 3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation inside frames.
 - 4. Installation Tolerances: Adjust hollow-metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.
- C. Hollow-Metal Doors: Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.
 - 1. Non-Fire-Rated Steel Doors:
 - a. Between Door and Frame Jambs and Head: 1/8 inch plus or minus 1/32 inch.
 - b. Between Edges of Pairs of Doors: 1/8 inch to 1/4 inch plus or minus 1/32 inch.
 - c. At Bottom of Door: 3/4 inch plus or minus 1/32 inch.
 - d. Between Door Face and Stop: 1/16 inch to 1/8 inch plus or minus 1/32 inch.
 - 2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
 - 3. Smoke-Control Doors: Install doors and gaskets according to NFPA 105.
- D. Glazing: Comply with installation requirements in Division 08 glass Sections and with hollow-metal manufacturer's written instructions.
 - 1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

3.4 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow-metal work that is warped, bowed, or otherwise unacceptable.
- B. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
- C. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.
- D. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

END OF SECTION

SECTION 081216 - ALUMINUM FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Interior aluminum door frames and glazing frames.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, fire-resistance rating, and finishes.
- B. Shop Drawings: For aluminum frames:
1. Include elevations, sections, and installation details for each wall-opening condition.
 2. Include details for each frame type, including dimensioned profiles and metal thicknesses.
 3. Include locations of reinforcements and preparations for hardware.
 4. Include details of anchorages, joints, field splices, connections, and accessories.
 5. Include details of moldings, removable stops, and glazing.
- C. Samples for Verification: For each type of the following products:
1. Framing Member and Finish: 12 inches long. Include trim.
 2. Corner Fabrication and Finish: 12-by-12-inch- long, full-size window corner, including full-size sections of extrusions with factory-applied color finish.
- D. Product Schedule: For aluminum frames. Use same designations indicated on Drawings. Coordinate with door hardware schedule and glazing.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For aluminum frames to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Avalon International Aluminum, LLC
 2. Versatrac Frames; a division of American Door Products Inc.
 3. Western Integrated Materials, Inc.
 4. Wilson Partitions; a division of Acradia, Inc.
- B. Source Limitations: Obtain aluminum frames from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Frames: Frames for fire-rated door assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure in accordance with NFPA 252.

1. Oversize Fire-Rated Frames: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that frames comply with standard construction requirements for tested and labeled fire-rated frames except for size.
2. Frames for Smoke- and Draft-Control Assemblies: Tested in accordance with UL 1784 and installed in compliance with NFPA 105.
 - a. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. at the tested pressure differential of 0.3-inch wg.

2.3 INTERIOR ALUMINUM DOOR FRAMES AND GLAZING FRAMES

- A. Aluminum Framing: ASTM B221, with alloy and temper required to suit structural and finish requirements, and not less than 0.062 inch thick.
- B. Door Frames: Extruded aluminum, reinforced for hinges, strikes, and closers.
- C. Glazing Frames: Extruded aluminum, for indicated glass thickness.
- D. Trim: Extruded aluminum, not less than 0.062 inch thick; removable, snap-in casing trim glazing stops door stops, without exposed fasteners.
 1. Trim Style: As selected by Architect from manufacturer's available sizes and profiles.
- E. Doors: As specified in Section 081416 "Flush Wood Doors."
- F. Frame and Trim Finish: Color anodic

2.4 ACCESSORIES

- A. Fasteners: Aluminum, nonmagnetic, stainless steel or other noncorrosive metal fasteners compatible with frames, stops, panels, reinforcement plates, hardware, anchors, and other items being fastened.
- B. Door Silencers: Manufacturer's standard continuous mohair, wool pile, or vinyl seals in black color.
- C. Smoke Seals: Intumescent strip or fire-rated gaskets in black.
- D. Glazing Gaskets: Manufacturer's standard extruded or molded rubber or plastic, to accommodate glazing thickness indicated; in black.
- E. Glass: As specified in Section 088000 "Glazing."
- F. Door Hardware: As selected by Architect from manufacturer's full range. As specified in Section 087100 "Door Hardware."

2.5 FABRICATION

- A. Provide concealed corner reinforcements and alignment clips for accurately fitted hairline joints at butted and mitered connections.
- B. Factory prepare aluminum frames to receive templated mortised hardware; include cutouts, reinforcements, mortising, drilling, and tapping, in accordance with the Door Hardware Schedule and templates furnished as specified in Section 087100 "Door Hardware."
 1. Locate hardware cutouts and reinforcements as required by fire-rated label for assembly.
 2. At frames receiving locks, provide additional internal reinforcement as needed to prevent excessive frame deflection.
- C. Fabricate frames for glazing with removable stops to allow glazing replacement without dismantling frame.

1. Locate removable stops on the inside of spaces accessed by keyed doors.

D. Fabricate components to allow secure installation without exposed fasteners.

2.6 GENERAL FINISH REQUIREMENTS

A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

A. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker as standard with manufacturer.

1. Color: Dark bronze.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify that wall thickness does not exceed standard tolerances allowed by throat size of indicated aluminum frame.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install aluminum frames plumb, rigid, properly aligned, and securely fastened in place; in accordance with manufacturer's written instructions.

1. At fire-protection-rated openings, install fire-rated frames in accordance with NFPA 80.

B. Install frame components in the longest possible lengths with no piece less than 48 inches; components 96 inches or shorter shall be one piece.

1. Fasten to suspended ceiling grid on maximum 48-inch centers, using sheet metal screws or other fasteners approved by frame manufacturer.

2. Use concealed installation clips to produce tightly fitted and aligned splices and connections.

3. Secure clips to extruded main-frame components and not to snap-in or trim members.

4. Do not leave screws or other fasteners exposed to view when installation is complete.

C. Glass: Install glass in accordance with Section 088000 "Glazing" and aluminum-frame manufacturer's written instructions.

D. Doors: Install doors aligned with frames and fitted with required hardware.

E. Door Hardware: Install in accordance with Section 087100 "Door Hardware" and aluminum-frame manufacturer's written instructions.

3.3 ADJUSTING

A. Inspect installation, correct misalignments, and tighten loose connections.

- B. Doors: Adjust doors to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly, and lubricate as recommended by manufacturer.
- C. Clean exposed frame surfaces promptly after installation, using cleaning methods recommended in writing by frame manufacturer and in accordance with AAMA 609 & 610.

END OF SECTION

SECTION 081416 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Solid-core doors with wood-veneer faces.
 - 2. Factory fitting flush wood doors to frames and factory machining for hardware.
- B. Related Requirements:
 - 1. Section 088000 "Glazing" for glass view panels in flush wood doors.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of door. Include details of core and edge construction, louvers, and trim for openings. Include factory-finishing specifications.
- B. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; and the following:
 - 1. Dimensions and locations of blocking.
 - 2. Dimensions and locations of mortises and holes for hardware.
 - 3. Dimensions and locations of cutouts.
 - 4. Undercuts.
 - 5. Requirements for veneer matching.
 - 6. Doors to be factory finished and finish requirements.
 - 7. Fire-protection ratings for fire-rated doors.
- C. Samples for Verification:
 - 1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.
 - 2. Plastic laminate, 6 inches square, for each color, texture, and pattern selected.
 - 3. Frames for light openings in flush wood doors, 6 inches, for each material, type, and finish required.

1.3 CLOSEOUT SUBMITTALS

- A. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.4 QUALITY ASSURANCE

- A. Fire-Rated Door Inspector Qualifications: Inspector for field quality-control inspections of fire-rated door assemblies complies with qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
 - 1. DHI's Fire and Egress Door Assembly Inspector (FDAI) certification.
- B. Provide the following upon request:
 - 1. Qualification Data: For door inspector.
 - a. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.
 - b. Submit copy of DHI's Fire and Egress Door Assembly Inspector (FDAI) certificate.
 - 2. Field quality-control reports.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in cardboard cartons and wrap bundles of doors in plastic sheeting.
- C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.6 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during remainder of construction period.

1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
 - b. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
 - 2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
 - 3. Warranty Period for Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following
 - 1. ABS Manufacturing - Doormerica Products
 - 2. Lambton Doors.
 - 3. Oshkosh Door Company.
 - 4. VT Industries Inc
- B. Source Limitations:
 - 1. Obtain flush wood doors from single manufacturer.
 - 2. Source Limitations: Obtain wood veneer flitches from the same qualified woodworking firm responsible for production of flush wood paneling and wood-veneer-faced architectural cabinets.

2.2 FLUSH WOOD DOORS, GENERAL

- A. Quality Standard: In addition to requirements specified, comply with ANSI/WDMA I.S. 1A.
 - 1. Contract Documents contain selections chosen from options in quality standard and additional requirements beyond those of quality standard. Comply with those selections and requirements in addition to quality standard.
- B. Low-Emitting Materials: Fabricate doors with adhesives and composite wood products that do not contain urea formaldehyde.
- C. WDMA I.S.1-A Performance Grade:

1. Heavy Duty unless otherwise indicated.
 - a. Extra Heavy Duty: Classrooms, public toilets, janitor's closets, assembly spaces, maintenance rooms, and exits.
 - b. Standard Duty: Closets (not including janitor's closets) and similar low-use doors.

- D. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 2. Temperature-Rise Limit: Where indicated and at vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
 3. Cores: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
 4. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
 5. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.

- E. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control, based on testing according to UL 1784.

- F. Particleboard-Core Doors:
 1. One of the following:
 - a. Particleboard: ANSI A208.1, Grade LD-2, made with binder containing no urea-formaldehyde.
 2. Blocking: Provide wood blocking in particleboard-core doors as needed to eliminate through-bolting hardware.
 3. Provide doors with structural-composite-lumber cores instead of particleboard cores for doors indicated to receive exit devices.
 - a. Structural-Composite-Lumber Properties: WDMA I.S.10.
 - 1) Screw Withdrawal, Face: 700 lbf.
 - 2) Screw Withdrawal, Edge: 400 lbf.

- G. Mineral-Core Doors:
 1. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
 2. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as needed to eliminate through-bolting hardware.
 3. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.
 - a. Screw-Holding Capability: 550 lbf per WDMA T.M.-10.

2.3 VENEER-FACED DOORS FOR TRANSPARENT FINISH

- A. Interior Solid-Core Doors:
 1. ANSI/WDMA I.S. 1A Grade: Premium.
 2. Species and Cut: White Oak, flat cut
 3. Match between Veneer Leaves: Book. Match color and size.
 4. Assembly of Veneer Leaves on Door Faces: Center-balance match.

5. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions.
6. Room Match: Match door faces within each separate room or area of building. Corridor-door faces do not need to match where they are separated by 10 feet or more.
7. Transom Match: Continuous match.
8. Blueprint Match: Not required. Provide pleasing match.
9. Exposed Vertical and Top Edges: Same species as faces or a compatible species - edge Type A.
10. Core: Particleboard.
11. Construction: Five or seven plies. Stiles and rails are bonded to core, then entire unit is abrasive planed before veneering. Faces are bonded to core using a hot press.
12. Sound-control: Provide doors with STC ratings indicated, but not less than rating of adjoining wall assembly as indicated on Drawings.

2.4 LIGHT FRAMES AND LOUVERS

- A. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads unless otherwise indicated.
 1. Wood Species: Same species as door faces or Species compatible with door faces.
 2. Profile: Flush rectangular beads.
 3. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.
- B. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.
- C. Wood Louvers: Door manufacturer's standard solid-wood louvers unless otherwise indicated.
 1. Wood Species: Species compatible with door faces.
- D. Louvers for Fire-Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire-protection rating of 1-1/2 hours and less.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Air Louvers Inc.
 - b. Anemostat; a Mestek company.
 - c. L & L Louvers, Inc.
 - d. Louvers & Dampers, Inc.; a Mestek company.
 - e. McGill Architectural Products.
 2. Metal and Finish: Hot-dip galvanized steel, 0.040 inch thick, with baked-enamel- or powder-coated finish.

2.5 FABRICATION

- A. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
 1. Comply with NFPA 80 requirements for fire-rated doors.
- B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, BHMA-156.115-W, and hardware templates.
 1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
 2. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.

- C. Transom and Side Panels: Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.
 - 1. Fabricate door and transom panels with full-width, solid-lumber, rabbeted, meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of metal door frames.
- D. Openings: Factory cut and trim openings through doors.
 - 1. Light Openings: Trim openings with moldings of material and profile indicated.
 - 2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Section 088000 "Glazing."
 - 3. Louvers: Factory install louvers in prepared openings.

2.6 SHOP PRIMING

- A. Doors for Transparent Finish: Shop prime faces and all four edges with stain (if required), other required pretreatments, and first coat of finish. Seal edges of cutouts and mortises with first coat of finish.

2.7 FACTORY FINISHING

- A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 - 1. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.
- B. Factory finish doors that are indicated to receive transparent finish.
- C. Transparent Finish:
 - 1. ANSI/WDMA I.S. 1A Grade: Premium
 - a. Finish: One of the following as standard with manufacturer:
 - 1) TR-4 Conversion Varnish.
 - 2) TR-6 Catalyzed Polyurethane.
 - 3) TR-8 UV Cured Acrylated Polyester/Urethane.
 - 2. Staining: Match Architect's sample.
 - 3. Sheen: Matte (Satin), 31-45 gloss units measured on 60-degree gloss meter per ASTM D523.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine doors and installed door frames, with Installer present, before hanging doors.
 - 1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Hardware: For installation, see Section 087100 "Door Hardware."

- B. Installation Instructions: Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
 - 1. Install fire-rated doors according to NFPA 80.
 - 2. Install smoke- and draft-control doors according to NFPA 105.
- C. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- D. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

- A. Operation: Rehang or replace doors that do not swing or operate freely.
- B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 083113 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes access doors and frames for walls and ceilings.
- B. Related Requirements:
 - 1. Division 23 "Air Duct Accessories" for heating and air-conditioning duct access doors.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, fire ratings, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches in size.
- C. Product Schedule: For access doors and frames. Use same designations indicated on Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, according to NFPA 252 or UL 10B.

2.2 INTERIOR ACCESS DOORS AND FRAMES

- A. Flush Access Doors with Concealed Flanges:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACUDOR Products, Inc.
 - b. JL Industries, Inc.; a division of the Activar Construction Products Group.
 - c. Karp Associates, Inc.
 - d. Larsens Manufacturing Company.
 - e. Milcor; a division of Hart & Cooley, Inc.
 - f. Nystrom.
 - 2. Description: Face of door flush with frame; with concealed flange for gypsum board installation and concealed hinge.
 - 3. Locations: Wall and ceiling.
 - 4. Door Size: Smallest possible to allow access to device, but not less than 12 inches square.
 - 5. Uncoated Steel Sheet for Door: Nominal 0.060 inch, 16 gage, factory primed; except provide stainless steel in wet areas.
 - a. Stainless Steel Sheet for Door: Nominal 0.062 inch, 16 gage, ASTM A480/A480M No. 4 finish.
 - 6. Frame Material: Same material and thickness as door.
 - 7. Latch and Lock: Cam latch, screwdriver operated.
- B. Recessed Access Doors with Concealed Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACUDOR Products, Inc.
 - b. JL Industries, Inc.; a division of the Activar Construction Products Group.
 - c. Karp Associates, Inc.
 - d. Larsens Manufacturing Company.
 - e. Milcor; a division of Hart & Cooley, Inc.
2. Nystrom. Description: Door face recessed 5/8 inch for gypsum board infill; with concealed flange for gypsum board installation and concealed hinge.
3. Locations: Wall.
4. Door Size: Smallest possible to allow access to device, but not less than 12 inches square.
5. Uncoated Steel Sheet for Door: Nominal 0.060 inch, 16 gage, factory primed.
6. Frame Material: Same material and thickness as door.
7. Latch and Lock: Cam latch, screwdriver operated.

2.3 FIRE-RATED ACCESS DOORS AND FRAMES

- A. Fire-Rated, Flush Access Doors with Concealed Flanges:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACUDOR Products, Inc.
 - b. JL Industries, Inc.; a division of the Activar Construction Products Group.
 - c. Karp Associates, Inc.
 - d. Larsens Manufacturing Company.
 - e. Milcor; a division of Hart & Cooley, Inc.
 - f. Nystrom.
 2. Description: Door face flush with frame, with a core of mineral-fiber insulation enclosed in sheet metal; with concealed flange for gypsum board installation, self-closing door, and concealed hinge.
 3. Locations: Interior fire-rated walls and fire-rated ceilings.
 4. Optional Features: Upward-opening doors for ceilings
 5. Door Size: Minimal, as indicated or required to access device or fixture.
 6. Fire-Resistance Rating: Not less than that of adjacent construction.
 7. Uncoated Steel Sheet for Door: Nominal 0.036 inch, 20 gage, factory primed.
 8. Latch and Lock: Self-closing, self-latching door hardware, screwdriver operated.

2.4 SPECIALTY DOORS

- A. Vent Fan Coil Door:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACUDOR Products, Inc.
 - b. JL Industries, Inc.; a division of the Activar Construction Products Group.
 - c. Karp Associates, Inc.
 - d. Larsens Manufacturing Company.
 - e. Milcor; a division of Hart & Cooley, Inc.
 - f. Nystrom.
 2. Basis-of-Design Product:
 - a. Acudor Model VFCD, or equal.
 3. Description: Stacked design with fully removable door design. Flush louver punched bottom door panel with air filter brackets.
 4. Size: As indicated.
 5. Material: 18 gauge steel; satin coated.
 - a. Finish: 5-stage iron phosphate preparation with baked enamel prime coat.
 6. Door: Recessed 5/8 inch to accept gypsum board panel; acoustically gasketed four sides.
 7. Frame: Drywall taping bead on all sides.

8. Hinge: Concealed.
9. Latch: Cylinder lock and key, coordinated with Section 087100 "Door Hardware."

2.5 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- B. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.
- C. Frame Anchors: Same material as door face.
- D. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.6 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.
- D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling. Provide access sleeves for each latch operator and install in holes cut through finish.
- E. Latch and Lock Hardware:
 1. Quantity: Furnish number of latches and locks required to hold doors tightly closed.
 2. Keys: Furnish two keys per lock and key all locks alike.

2.7 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Factory Primed: Apply manufacturer's standard, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.

3.3 FIELD QUALITY CONTROL

- A. Inspection Agency: Owner will engage a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Inspections:
 - 1. Fire-Rated Door Inspections: Inspect each fire-rated access door in accordance with NFPA 80, Section 5.2.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated access door indicating compliance with each item listed in NFPA 80.

3.4 ADJUSTING

- A. Adjust doors and hardware, after installation, for proper operation.

END OF SECTION

SECTION 083313 - COILING COUNTER DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Counter door assemblies.
- B. Related Requirements:
 - 1. Section 055000 "Metal Fabrications" for door-opening framing and corner guards.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type and size of coiling counter door and accessory.
 - 1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
 - 3. Include description of automatic closing device and testing and resetting instructions.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
 - 4. Show locations of controls, locking devices, and other accessories.
 - 5. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
 - 1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
 - 1. Curtain slats.
 - 2. Bottom bar with sensor edge.
 - 3. Locking device(s).
 - 4. Include similar Samples of accessories involving color selection.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For coiling counter doors to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
 - 1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain coiling counter doors from single source from single manufacturer.
 - 1. Obtain operators and controls from coiling counter door manufacturer.

2.2 COUNTER DOOR ASSEMBLY

- A. Counter Door: Coiling counter door formed with curtain of interlocking metal slats.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Cookson; a CornellCookson company.
 - b. Cornell; a CornellCookson company.
 - c. McKeon Rolling Steel Door Company, Inc.
 - d. Overhead Door Corporation.
- B. Operation Cycles: Door components and operators capable of operating for not less than 20,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
 - 1. Include tamperproof cycle counter.
- C. STC Rating: 26.
- D. Door Curtain Material: Stainless steel.
- E. Bottom Bar: Manufacturer's standard continuous channel or tubular shape, fabricated stainless steel and finished to match door.
- F. Curtain Jamb Guides: Stainless steel with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise.
- G. Hood: Match curtain material and finish.
- H. Sill Configuration: As indicated.
- I. Locking Devices: Equip door with locking device assembly.
 - 1. Locking Device Assembly: Cremone-type, both jamb sides locking bars, operable from inside with thumbturn outside with cylinder.
- J. Door Finish:
 - 1. Stainless Steel Finish: ASTM A480/A480M No. 4 (polished directional satin).
 - 2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

2.3 DOOR CURTAIN MATERIALS AND FABRICATION

- A. Door Curtains: Fabricate coiling counter door curtain of interlocking metal slats in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:

1. Stainless Steel Door Curtain Slats: ASTM A240/A240M or ASTM A666, Type 304; sheet thickness of 0.025 inch; and as required.
 2. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face.
- B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain.
1. Removable Posts and Jamb Guides: Manufacturer's standard.

2.4 HOODS

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
1. Stainless Steel: 0.025-inch- thick, stainless steel sheet, Type 304, complying with ASTM A240/A240M or ASTM A666.
- B. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.

2.5 LOCKING DEVICES

- A. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
1. Lock Cylinders: As specified in Section 087100 "Door Hardware".
 2. Keys: Three for each cylinder.
- B. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.6 COUNTERBALANCE MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless or welded carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.7 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-rewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
1. Comply with NFPA 70.
 2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door Operator Location(s): Operator location indicated for each door.
1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
- D. Motors: Reversible-type motor with controller (disconnect switch) for motor exposure indicated for each door assembly.
1. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
 2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. For non-fire-rated doors, activation of device immediately stops and reverses downward door travel.
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
 - a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained or constant pressure on close button.
- G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
1. Type: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
- H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

2.8 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: ASTM A480/A480M No. 4.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install coiling counter doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; in accordance with manufacturer's written instructions and as specified.
- B. Install coiling counter doors, hoods, controls, and operators at the mounting locations indicated for each door.

3.3 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

3.4 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service is to include 12 months' full maintenance by skilled employees of coiling-door Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.
1. Perform maintenance, including emergency callback service, during normal working hours.
 2. Include 24-hour-per-day, seven-day-per-week, emergency callback service.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain coiling counter doors.

END OF SECTION 083313

SECTION 084113 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes aluminum-framed entrance and storefront systems.
- B. Related Requirements:
 - 1. Section 081216 "Aluminum Frames" for interior aluminum framing with wrap-around frames.
 - 2. Section 084316 "Interior Aluminum-Framed Storefronts" for nonthermal interior aluminum storefront framing.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
 - 1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
 - 2. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 - 3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
 - 4. Include point-to-point wiring diagrams showing the following:
 - a. Power requirements for each electrically operated door hardware.
 - b. Location and types of switches, signal device, conduit sizes, and number and size of wires.
- C. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- D. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For aluminum-framed entrances and storefronts to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors.

- B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- C. Provide the following upon request:
 - 1. Qualification Data:
 - a. For Installer.
 - 2. Energy Performance Certificates: For aluminum-framed entrances and storefronts, accessories, and components, from manufacturer.
 - a. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront.
 - 3. Product Test Reports: For aluminum-framed entrances and storefronts, for tests performed by a qualified testing agency.
 - 4. Quality-Control Program: Developed specifically for Project, including fabrication and installation, in accordance with recommendations in ASTM C1401. Include periodic quality-control reports.

1.5 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including, but not limited to, excessive deflection.
 - b. Noise or vibration created by wind and thermal and structural movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
 - 2. Warranty Period: Five years from date of Substantial Completion.
- B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Warranty Period:
 - a. Exterior: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, and curtain walls, including framing and accessories, from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- B. Structural Loads:
1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: As indicated on Drawings.
- C. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches.
 2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
 - a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.
 3. Cantilever Deflection: Limited to 2l/175 at unsupported cantilevers.
- D. Structural: Test in accordance with ASTM E330/E330M as follows:
1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.
 2. When tested at 150 percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
 3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- E. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft. .
- F. Water Penetration under Dynamic Pressure: Test in accordance with AAMA 501.1 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft..
 2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.
- G. Seismic Performance: Aluminum-framed entrances and storefronts shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.

- H. Energy Performance: Glazed aluminum curtain walls shall have certified and labeled energy performance ratings in accordance with NFRC.
1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have a total system U-factor of not more than 0.4538 Btu/sq. ft. x h x deg F as determined in accordance with NFRC 100, based on center-of-glass (COG) values indicated in Section 088000.
 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a total system solar heat gain coefficient of no greater than 0.23 as determined in accordance with NFRC 200 based on center-of-glass (COG) values indicated in Section 088000.
 3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.30 cfm/sq. ft. of fixed wall area as determined in accordance with ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft..
 4. Condensation Resistance: Design the wall and its components to not develop any visible interior condensation on framing members or glazing when the exterior air dry bulb temperature is 95 deg F and the interior air dry bulb temperature is 65 deg F and with a 50 percent relative humidity.
 - a. Provide independent laboratory test reports based on AAMA 1503.1, confirming wall system performance to at least the above criteria.
 - b. If independent laboratory test reports are unavailable to verify thermal performance, provide computer analysis using THERM 5 and Windows 5 software as developed by Lawrence Berkeley National Laboratory. Include in the analysis at least all principle mullions for sill, jamb, and head conditions for vision lights and spandrel areas.
- I. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
 2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
 - b. Low Exterior Ambient-Air Temperature: 0 deg F.
 - c. Interior Ambient-Air Temperature: 72 deg F.

2.3 STOREFRONT SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Arcadia, Inc.
 2. Kawneer North America, an Arconic company.
 3. Oldcastle BuildingEnvelope.
- B. Basis-of-Design: Kawneer TriFab VG 451T
- C. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
1. Exterior Framing Construction: Thermally broken.
 2. Glazing System: Retained mechanically with gaskets on four sides.
 3. Glazing Plane: Front.
 4. Finish: High-performance organic finish.
 5. Fabrication Method: Field-fabricated stick system.
 6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 7. Steel Reinforcement: As required by manufacturer.
- D. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

- E. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

2.4 ENTRANCE DOOR SYSTEMS

- A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing or automatic operation.
 - 1. Door Construction: 1-3/4-inch overall thickness, with minimum 0.125-inch- thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
 - a. Thermal Construction: Manufacturer's standard.
 - 2. Door Design: As indicated.
 - 3. Glazing Stops and Gaskets: Square, snap-on, extruded-aluminum stops and preformed gaskets.
 - a. Provide nonremovable glazing stops on outside of door.
 - 4. Finish: Match adjacent storefront framing finish.

2.5 ENTRANCE DOOR HARDWARE

- A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 087100 "Door Hardware."

2.6 GLAZING

- A. Glazing: Comply with Section 088000 "Glazing."
- B. Glazing Gaskets: Manufacturer's silicone sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.
- C. Glazing Sealants: As recommended by manufacturer.

2.7 MATERIALS

- A. Sheet and Plate: ASTM B209.
- B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
- C. Structural Profiles: ASTM B308/B308M.
- D. Steel Reinforcement:
 - 1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
 - 2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
 - 3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.
- E. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.

2.8 ACCESSORIES

- A. Automatic Door Operators: Section 087113 "Automatic Door Operators."
- B. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
 3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
- C. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A153M requirements.
- D. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
- E. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.
- F. Rigid PVC Filler.

2.9 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Physical and thermal isolation of glazing from framing members.
 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 5. Provisions for field replacement of glazing from exterior or interior.
 6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
1. At exterior doors, provide compression weather stripping at fixed stops.
- F. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
 2. At exterior doors, provide weather sweeps applied to door bottoms.
- G. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
- H. After fabrication, clearly mark components to identify their locations in Project in accordance with approved Shop Drawings.

2.10 ALUMINUM FINISHES

- A. High-Performance Organic Finish, Two-or Three- Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear top coat.
 - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2. Color and Gloss: As indicated on Drawings.
 - a. Basis-of-Design Product: Kawneer Permafluor with clear topcoat.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions and approved Shop Drawings.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.
- E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- F. Seal perimeter and other joints watertight unless otherwise indicated.
- G. Metal Protection:
 - 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
 - 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- H. Set continuous sill members and flashing in full sealant bed, as specified in Section 079200 "Joint Sealants," to produce weathertight installation.
- I. Install joint filler behind sealant as recommended by sealant manufacturer.
- J. Install components plumb and true in alignment with established lines and grades.

3.3 INSTALLATION OF GLAZING

- A. Install glazing as specified in Section 088000 "Glazing."

3.4 INSTALLATION OF ALUMINUM-FRAMED ENTRANCE DOORS

- A. Install entrance doors to produce smooth operation and tight fit at contact points.
 - 1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
 - 2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware in accordance with entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.

3.5 ERECTION TOLERANCES

- A. Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
 - 1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
 - 2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
 - 3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
 - 4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: District will engage a qualified testing agency to perform tests and inspections.
- B. Testing Services: Testing and inspecting of representative areas of glazed aluminum curtain walls shall take place as installation proceeds to determine compliance of installed assemblies with specified requirements.
 - 1. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft., of fixed wall area when tested in accordance with ASTM E 783 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft..
 - a. Test Area: One bay wide, but not less than 30 feet, by one story of glazed aluminum curtain wall.
 - b. Perform a minimum of three tests in areas as directed by Architect.
 - c. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.
 - 2. Water Penetration: Areas shall be tested in accordance with ASTM E 1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and shall not evidence water penetration.
 - a. Test Area: One bay wide, but not less than 30 feet, by one story of glazed aluminum curtain wall.
 - b. Perform a minimum of three tests in areas as directed by Architect.
 - c. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.
- C. Aluminum-framed entrances and storefronts will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION

SECTION 084316 - INTERIOR ALUMINUM-FRAMED STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes interior aluminum-framed storefront systems.
- B. Related Requirements:
 - 1. Section 081216 "Aluminum Frames" for interior aluminum wrap-around framing.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For aluminum-framed storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
 - 1. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed storefronts, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
- C. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For aluminum-framed storefronts to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- B. Provide the following upon request:
 - 1. Product Test Reports: For aluminum-framed storefronts, for tests performed by a qualified testing agency.

1.5 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including, but not limited to, excessive deflection.

- b. Noise or vibration created by wind and thermal and structural movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
 2. Warranty Period: Five years from date of Substantial Completion.
- B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
 - c. Cracking, peeling, or chipping.
 2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Arcadia, Inc.
 2. Kawneer North America, an Arconic company.
 3. Oldcastle BuildingEnvelope.
- B. Basis-of-Design: Kawneer TriFab 400
- C. Source Limitations: Obtain all components of interior aluminum-framed storefront system, including accessories, from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Seismic Performance: Aluminum-framed storefronts shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.

2.3 ALUMINUM-FRAMED STOREFRONT SYSTEMS

- A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 1. Interior Framing Construction: Nonthermal.
 2. Glazing System: Retained mechanically with gaskets on four sides; 1-3/4 inch by 4 inch.
 3. Glazing Plane: Front.
 4. Finish: Color anodic finish.
 5. Fabrication Method: Field-fabricated stick system.
 6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 7. Steel Reinforcement: As required by manufacturer.
- B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

2.4 GLAZING

- A. Glazing: Comply with Section 088000 "Glazing."
- B. Glazing Gaskets: Comply with Section 088000 "Glazing."
- C. Glazing Sealants: As recommended by manufacturer and complying with Section 088000 "Glazing."
 - 1. Sealant shall have a VOC content of 250 g/L or less.
 - 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.5 MATERIALS

- A. Sheet and Plate: ASTM B209.
- B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
- C. Structural Profiles: ASTM B308/B308M.
- D. Steel Reinforcement:
 - 1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
 - 2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
 - 3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

2.6 ACCESSORIES

- A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 2. Reinforce members as required to receive fastener threads.
 - 3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
- B. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
- C. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.
- D. Rigid PVC Filler.

2.7 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Accommodations for mechanical movements of glazing and framing to maintain required glazing edge clearances.
 4. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. After fabrication, clearly mark components to identify their locations in Project in accordance with approved Shop Drawings.

2.8 ALUMINUM FINISHES

- A. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker as standard with manufacturer.
1. Color: Dark bronze.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.
- E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- F. Seal perimeter and other joints watertight unless otherwise indicated.
- G. Metal Protection:
1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- H. Set continuous sill members and flashing in full sealant bed, as specified in Section 079200 "Joint Sealants," to produce weathertight installation.
- I. Install joint filler behind sealant as recommended by sealant manufacturer.

- J. Install components plumb and true in alignment with established lines and grades.

3.3 INSTALLATION OF GLAZING

- A. Install glazing as specified in Section 088000 "Glazing."

3.4 ERECTION TOLERANCES

- A. Install aluminum-framed storefronts to comply with the following maximum tolerances:
 - 1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
 - 2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
 - 3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
 - 4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

END OF SECTION 084313

SECTION 084413 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes conventionally glazed aluminum curtain walls installed as stick assemblies.
- B. Related Requirements:
 - 1. Section 013573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.
 - 2. Section 079200 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls and for sealants to the extent not specified in this Section.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For glazed aluminum curtain walls. Include plans, elevations, sections, full-size details, and attachments to other work.
 - 1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
 - 2. Include full-size isometric details of each vertical-to-horizontal intersection of glazed aluminum curtain walls, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
- C. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes. Include 2 or more samples in each set.
- D. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
 - 1. Joinery, including concealed welds.
 - 2. Anchorage.
 - 3. Expansion provisions.
 - 4. Glazing.
 - 5. Flashing and drainage.
 - 6. Cross-sectional sample of curtain wall showing thermal break construction.
- E. Delegated-Design Submittal: Refer to Section 013573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.
 - 1. Provide delegated-design submittals for glazed aluminum curtain walls.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer capable of fabricating glazed aluminum curtain walls that meet or exceed energy performance requirements indicated and of documenting this performance by certification, labeling, and inclusion in lists.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- C. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not revise intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If revisions are proposed, submit comprehensive explanatory data to Architect for review.
- D. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- E. Energy Performance Standards: Comply with NFRC for minimum standards of energy performance, materials, components, accessories, and fabrication. Comply with more stringent requirements if indicated.
 - 1. Provide NFRC-certified glazed aluminum curtain walls with an attached label.
- F. Provide the following upon request:
 - 1. Qualification Data: For qualified Installer.
 - 2. Seismic Qualification Certificates: For glazed aluminum curtain walls, accessories, and components, from manufacturer.
 - a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 3. Welding certificates.
 - 4. Energy Performance Certificates: For glazed aluminum curtain walls, accessories, and components, from manufacturer.
 - a. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall.
 - 5. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified preconstruction testing agency, for glazed aluminum curtain walls, indicating compliance with performance requirements.
 - 6. Field quality-control reports.
- G. Mockups: Build first-in-place mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Furnish all labor and materials to completely erect mockup unit of sufficient size and configuration to demonstrate the performance capabilities of the vertical wall system. Schedule mockup erection and testing sufficiently in advance of wall system fabrication to cause no delay. Do not install mockup materials as part of the wall system.
 - 2. After completion of mockup construction and prior to start of testing sequence one vision glass lite and one spandrel panels are to be removed and replaced to successfully demonstrate project reglazing procedures.
 - 3. Build mockup of typical wall area as shown on Drawings.

4. Exact configuration will be determined during wall system shop drawing review. For purposes of bidding, include costs for a vertical mockup 15feet igh by 30 feet wide with an outside corner.
5. Mockup shall have all details complete and identical to those approved on the wall system shop drawings. Mockup shall demonstrate quality of materials, finish, and workmanship, as well as compliance with performance requirements.
6. Provide schedule for mockup fabrication, erection, glazing, sealing and testing a minimum of 30 days in advance of fabrication to permit owner and Architect to coordinate monitoring and observation.
7. Field testing shall be performed on mockups in accordance with requirements in "Field Quality Control" Article.
8. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
9. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of structural supports for glazed aluminum curtain walls by field measurements before fabrication and indicate measurements on Shop Drawings.

1.6 WARRANTY

- A. Special Assembly Warranty: Standard form in which Installer agrees to repair or replace components of glazed aluminum curtain walls that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration created by wind and thermal and structural movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested in accordance with ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of manufacturer's standard glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 1. Glazed aluminum curtain walls shall withstand movements of supporting structure indicated on Drawings including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.

- b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- B. Delegated Design: Engage a registered design professional, as defined in Section 013573 "Delegated Design Requirements and Procedures" to design glazed aluminum curtain walls.
1. Material properties indicated in this Section shall be considered as minimum properties.
- C. Structural Loads:
1. Wind Loads: As indicated on Drawings.
 2. Periodic Maintenance-Equipment Loads: Minimum 250 pounds point load any place on mullions.
 3. Structural-Test Performance: Test in accordance with ASTM E 330 as follows:
 - a. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
 - b. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
 - c. Test Durations: As required by design wind velocity, but not less than 10 econds.
 4. Deflection of Framing Members: At design wind pressure, as follows:
 - a. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span for spans greater than 13 feet 6 inches (4.1 m) or an amount that restricts edge deflection of individual glazing lites to 3/4 inch (19 mm), whichever is less.
 - b. Deflection Parallel to Glazing Plane: Limited to L/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller.
 - c. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to two times the length of cantilevered member, divided by 175.
 5. Seismic Performance: Glazed aluminum curtain walls shall withstand the effects of earthquake motions determined in accordance with SEI/ASCE 7.
 - a. Component Importance Factor is 1.0.
- D. Water Penetration under Static Pressure: No evidence of water penetration through fixed glazing and framing areas when tested in accordance with ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft. (480 Pa).
- E. Water Penetration under Dynamic Pressure: No evidence of water penetration through fixed glazing and framing areas when tested in accordance with AAMA 501.1 at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft. (480 Pa).
1. Controlled Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters that does not wet insulation within the wall system and that is drained to exterior.
- F. Energy Performance: Glazed aluminum curtain walls shall have certified and labeled energy performance ratings in accordance with NFRC.
1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have a total system U-factor of not more than 0.38 Btu/sq. ft. x h x deg F as determined in accordance with NFRC 100, based on center-of-glass (COG) values indicated in Section 088000.
 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a total system solar heat gain coefficient of no greater than 0.23 as determined in accordance with NFRC 200 based on center-of-glass (COG) values indicated in Section 088000..

3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.30 cfm/sq. ft. (1.50 L/s per sq. m) of fixed wall area as determined in accordance with ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft. (300 Pa).
 4. Condensation Resistance: Design the wall and its components to not develop any visible interior condensation on framing members or glazing when the exterior air dry bulb temperature is 95 deg F and the interior air dry bulb temperature is 65 deg F and with a 50 percent relative humidity.
 - a. Provide independent laboratory test reports based on AAMA 1503.1, confirming wall system performance to at least the above criteria.
 - b. If independent laboratory test reports are unavailable to verify thermal performance, provide computer analysis using THERM 5 and Windows 5 software as developed by Lawrence Berkeley National Laboratory. Include in the analysis at least all principle mullions for sill, jamb, and head conditions for vision lights and spandrel areas.
- G. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
 - b. Low Exterior Ambient-Air Temperature: 0 deg F.
 - c. Interior Ambient-Air Temperature: 72 deg F (24 deg C)

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Arcadia, Inc.
 2. Kawneer North America; an Arconic company.
 3. Oldcastle BuildingEnvelope.
- B. Basis-of-Design: Kawneer 1600 UT

2.3 FRAMING

- A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
1. Construction: Thermally broken.
 2. Glazing System: Retained mechanically with gaskets on four sides.
 3. Glazing Plane: Front.
- B. Thermally Broken Construction:
1. Provide one of the following types of thermal break construction:
 - a. Insulbar: A glass-reinforced polyamide 6/6 nylon, with glass fibers oriented in three directions, mechanically crimped into dual dovetail-shaped slots in the aluminum extrusions.
 - b. Struct-Link or similar construction as approved: A poured and interrupted debridged polyurethane construction that periodically leaves a measured length of aluminum web to provide structural integrity, with the debridged sections continuously sealed using an elastomeric sealant.
 - c. Azon or similar construction as approved: A poured and debridged polyurethane construction with mechanically abraded surfaces that lock in the polyurethane minimizing dry shrinkage and fracturing of the polyurethane.
 - d. Pressure Bar: A continuous extruded aluminum member anchored to the window framing system with mechanical fasteners and separated from the framing by an insulating non-metallic spacer.

- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- D. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 2. Reinforce members as required to receive fastener threads.
 - 3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
- E. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- F. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
- G. Framing Sealants: Manufacturer's standard sealants with VOC content of 250g/L or less when calculated in accordance with 40 CFR 59, Subpart D (EPA method 24).

2.4 MULLION EXTENSIONS, TRIM, SILLS AND CLOSURES

- A. Materials:
 - 1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated, not less than adjacent curtain wall framing.
 - a. Sheet and Plate: ASTM B 209/ASTM B 209M.
 - b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221/ASTM B 221M.

2.5 GLAZING

- A. Glazing: Comply with Section 088000 "Glazing."
- B. Glazing Gaskets: Manufacturer's silicone sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.
 - 1. Provide gaskets that are compatible with glazing sealants and will provide for silicone adhesion.
- C. Glazing Sealants: As recommended by manufacturer.

2.6 OPERABLE UNITS

- A. Doors: Comply with Section 084113 "Aluminum-Framed Entrances and Storefronts."

2.7 SUNSHADES

- A. Aluminum airfoil sunshades attached to curtain wall framing: Refer to Section 107123 "Exterior Sun Control Devices."

2.8 ACCESSORY MATERIALS

- A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
 3. No exposed fastenings will be permitted in aluminum work, unless otherwise specified or indicated.
 4. In certain locations where it is impossible or highly impractical, or in locations where exposed but hidden from view, consideration will be given to exposed fastenings where such fastenings are Phillips, flat head, or countersunk machine screws, finished to match framing system.
- B. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
1. Concrete Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- C. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials or Dead-soft, 0.018-inch- thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer.
- D. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.9 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Sheet and Plate: ASTM B 209 (ASTM B 209M).
 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
 3. Extruded Structural Pipe and Tubes: ASTM B 429.
 4. Structural Profiles: ASTM B 308/B 308M.
 5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
- B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM and prepare surfaces in accordance with applicable SSPC standard.
1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
 2. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
 3. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

2.10 FABRICATION

- A. Form aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Physical and thermal isolation of glazing from framing members.
 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 5. Provisions for field replacement of glazing from exterior or interior.
 6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

- D. Fabricate components that, when assembled, have the following characteristics:
 - 1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
- E. Curtain-Wall Framing: Fabricate components for assembly using shear-block system .
- F. Factory-Assembled Frame Units:
 - 1. Rigidly secure nonmovement joints.
 - 2. Seal joints watertight unless otherwise indicated.
 - 3. Install glazing to comply with requirements in Section 088000 "Glazing."
- G. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.11 ALUMINUM FINISHES

- A. High-Performance Organic Finish, Three- Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear top coat.
 - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions .
 - 2. Color and Gloss: As indicated on Drawings.
 - a. Basis-of-Design Product: Kawneer Permafluor with clear topcoat.

PART 3 - EXECUTION

3.1 MOCKUP APPROVAL

- A. Do not proceed with erection of curtain wall work before completion and approval of mockups.

3.2 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. General:
 - 1. Comply with manufacturer's written instructions.
 - 2. Do not install damaged components.
 - 3. Fit joints to produce hairline joints free of burrs and distortion.
 - 4. Rigidly secure nonmovement joints.
 - 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 - 6. Weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
 - 7. Seal joints watertight unless otherwise indicated.
- B. Approved mockups establish acceptable workmanship and quality standards of the Project.
- C. Metal Protection:

1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- D. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
- E. Install components plumb and true in alignment with established lines and grades.
- F. Install glazing as specified in Section 088000 "Glazing."

3.4 ERECTION TOLERANCES

- A. Erection Tolerances: Install glazed aluminum curtain walls to comply with the following maximum tolerances:
1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
 2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
 3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inchwide or more, limit offset from true alignment to 1/4 inch.
 4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Testing Services: Testing and inspecting of representative areas of glazed aluminum curtain walls shall take place as installation proceeds to determine compliance of installed assemblies with specified requirements.
1. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft., of fixed wall area when tested in accordance with ASTM E 783 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft..
 - a. Test Area: One bay wide, but not less than 30 feet, by one story of glazed aluminum curtain wall.
 - b. Perform a minimum of three tests in areas as directed by Architect.
 - c. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.
 2. Water Penetration: Areas shall be tested in accordance with ASTM E 1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and shall not evidence water penetration.
 - a. Test Area: One bay wide, but not less than 30 feet, by one story of glazed aluminum curtain wall.
 - b. Perform a minimum of three tests in areas as directed by Architect.
 - c. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.

- C. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION

SECTION 087100 – DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes items known commercially as finish or door hardware that are required for swing, sliding, and folding doors, except special types of unique hardware specified in the same sections as the doors and door frames on which they are installed.
- B. This Section includes the following, but is not necessarily limited to:
 - 1. Door Hardware, including electric hardware.
 - 2. Storefront and Entrance door hardware.
 - 3. Power supplies for electric hardware.
 - 4. Low-energy door operators plus sensors and actuators.
 - 5. Thresholds, gasketing and weather-stripping.
 - 6. Door silencers or mutes.
- C. Related Sections: The following sections are noted as containing requirements that relate to this Section, but may not be limited to this listing.
 - 1. Section 08 11 13 - Hollow Metal Doors And Frames
 - 2. Section 08 12 16 - Aluminum Frames
 - 3. Section 08 14 16 - Flush Wood Doors
 - 4. Section 08 41 13 - Aluminum-Framed Entrances And Storefronts
 - 5. Division 28: - Fire/Life-Safety Systems & Security Access Systems

1.2 REFERENCES (Use date of standard in effect as of Bid date.)

- A. California Building Code, CCR, Title 24.
- B. BHMA – Builders’ Hardware Manufacturers Association
- C. CCR – California Code of Regulations, Title 24, Part 2, California State Accessibility Standards.
- D. DHI – Door and Hardware Institute
- E. NFPA - National Fire Protection Association.
 - 1. NFPA 80 - Fire Doors and Other Opening Protectives
 - 2. NFPA 105 - Smoke and Draft Control Door Assemblies
- F. UL - Underwriters Laboratories.
 - 1. UL 10C - Fire Tests of Door Assemblies
 - 2. UL 305 - Panic Hardware
- G. WHI - Warnock Hersey Incorporated
- H. SDI - Steel Door Institute

1.3 SUBMITTALS & SUBSTITUTIONS

- A. General: Submit in accordance with Conditions of the Contract and Division 1 Specification sections.

- B. Submit product data (catalog cuts) including manufacturers' technical product information for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.
- C. Submit six (6) copies of schedule organized vertically into "Hardware Sets" with index of doors and headings, indicating complete designations of every item required for each door or opening. Include following information:
 - 1. Include a Cover Sheet with;
 - a. Job Name, location, telephone number.
 - b. Architects name, location and telephone number.
 - c. Contractors name, location, telephone number and job number.
 - d. Suppliers name, location, telephone number and job number.
 - e. Hardware consultant's name, location and telephone number.
 - 2. Job Index information included;
 - a. Numerical door number index including; door number, hardware heading number and page number.
 - b. Complete keying information (referred to DHI hand-book "Keying Systems and Nomenclature"). Provision should be made in the schedule to provide keying information when available; if it is not available at the time the preliminary schedule is submitted.
 - c. Manufacturers' names and abbreviations for all materials.
 - d. Explanation of abbreviations, symbols, and codes used in the schedule.
 - e. Mounting locations for hardware.
 - f. Clarification statements or questions.
 - g. Catalog cuts and manufacturer's technical data and instructions.
 - 3. Vertical schedule format sample:

Heading Number 1 (Hardware group or set number – HW -1)					
			(a) 1 Single Door #1 - Exterior from Corridor 101	(b) 90°	(c) RH
			(d) 3' 0"x7' 0" x 1-3/4" x (e) 20 Minute (f) WD x HM		
(g) 1	(h)	(i) ea	(j) Hinges - (k) 5BB1HW 4.5 x 4.5 NRP (l) ½ TMS	(m) 626	(n) IVE
2	6AA	1 ea	Lockset - ND50PD x RHO x RH x 10-025 x JTMS	626	SCH

(a) - Single or pair with opening number and location. (b) - Degree of opening (c) - Hand of door(s) (d) - Door and frame dimensions and door thickness. (e) - Label requirements if any. (f) - Door by frame material. (g) - (Optional) Hardware item line #. (h) - Keyset Symbol. (i) - Quantity. (j) - Product description. (k) - Product Number. (l) - Fastenings and other pertinent information. (m) - Hardware finish codes per ANSI A156.18. (n) - Manufacture abbreviation.

- D. Make substitution requests in accordance with Division 1. Substitution requests must be made prior to bid date. Include product data and indicate benefit to the project. Furnish samples of any proposed substitution.
- E. Wiring Diagrams: Provide product data and wiring and riser diagrams for all electrical products listed in the Hardware Schedule portion of this section.
- F. Keying Schedule: Submit separate detailed schedule indicating clearly how the Owner's final instructions on keying of locks has been fulfilled.

- G. Templates for doors, frames, and other work specified to be factory prepared for the installation of door hardware. Check shop drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.
- H. Furnish as-built/as-installed schedule with close-out documents, including keying schedule and transcript, wiring/riser diagrams, manufacturers' installation and adjustment and maintenance information.
- I. Fire Door Assembly Testing: Submit a written record of each fire door assembly to the Owner to be made available to the Authority Having Jurisdiction (AHJ) for future building inspections.

1.4 QUALITY ASSURANCE

- A. Obtain each type of hardware (latch and lock sets, hinges, closers, exit devices, etc.) from a single manufacturer.
- B. Supplier Qualifications: A recognized architectural door hardware supplier, with warehousing facilities in the project's vicinity, that has a record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this project and that employs an experienced architectural hardware consultant (AHC) who is available to Owner, Architect, and Contractor, at reasonable times during the course of the Work, for consultation.
 - 1. Responsible for detailing, scheduling and ordering of finish hardware.
 - 2. Stock parts for products supplied and are capable of repairing and replacing hardware items found defective within warranty periods.
- C. Hardware Installer: Company specializing in the installation of commercial door hardware with five years documented experience.
- D. Fire-Rated Openings: Provide door hardware for fire-rated openings that complies with NFPA Standard No. 80 and requirements of authorities having jurisdiction. Provide only items of door hardware that are listed and tested by UL or Warnock Hersey for given type/size opening and degree of label. Provide proper latching hardware, door closers, approved-bearing hinges and seals whether listed in the Hardware Schedule or not.
 - 1. Where emergency exit devices are required on fire-rated doors, (with supplementary marking on doors' UL labels indicating "Fire Door to be Equipped with Fire Exit Hardware") provide UL label on exit devices indicating "Fire Exit Hardware".
- E. Exit Doors: Operable from inside with single motion without the use of a key or special knowledge or effort.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Coordinate delivery of packaged hardware items to the appropriate locations (shop or field) for installation.
- B. Hardware items shall be individually packaged in manufacturers' original containers, complete with proper fasteners. Clearly mark packages on outside to indicate contents and locations in hardware schedule and in work.
- C. Provide locked storage area for hardware, protect from moisture, sunlight, paint, chemicals, etc.
- D. Inventory door hardware jointly with representatives of hardware supplier and hardware installer until each is satisfied that count is correct.

1.6 WARRANTY

- A. Provide warranties of respective manufacturers' regular terms of sale from day of final acceptance as follows:
 - 1. Mechanical Locksets: Ten (10) years.
 - 2. Electro-mechanical locksets: Three (3) years
 - 3. Closers: Thirty (30) years –except electronic closers shall be two (2) years.
 - 4. Mechanical exit devices: Ten (10) years
 - 5. Electro-mechanical exit devices: Five (5) years
 - 6. All other hardware: Three (3) years.

1.7 MAINTENANCE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

1.8 PRE-INSTALLATION CONFERENCE

- A. Convene a pre-installation conference at least one week prior to beginning work of this section.
- B. Attendance: Architect, Construction Manager, Contractor, Security Contractor, Hardware Supplier, Installer, Key Owner Personnel, and Project Inspector.
- C. Agenda: Review hardware schedule, products, installation procedures and coordination required with related work. Review Owner's keying standards.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

<u>Item</u>	<u>Manufacturer</u>	<u>Acceptable Substitutes</u>
Hinges	Ives	Hager, Stanley, McKinney
Locks, Latches & Cylinders	Schlage	None – owner standard
Exit Devices	Von Duprin	None – owner standard
Closers	LCN	None – owner standard
Push, Pulls & Protection Plates	Ives	Trimco, BBW, DCI
Flush Bolts	Ives	Trimco, BBW, DCI
Dust Proof Strikes	Ives	Trimco, BBW, DCI
Coordinators	Ives	Trimco, BBW, DCI
Stops	Ives	Trimco, BBW, DCI
Overhead Stops	Glynn-Johnson	or Approved Equal

Thresholds	Zero	Pemko, National Guard
Seals & Bottoms	Zero	Pemko, National Guard

2.2 MATERIALS

- A. Hinges: Exterior out-swinging door butts shall be non-ferrous material and shall have stainless steel hinge pins. All doors to have non-rising pins.
1. Hinges shall be sized in accordance with the following:
 - a. Height:
 - 1) Doors up to 42" wide: 4-1/2" inches.
 - 2) Doors 42" to 48" wide: 5 inches.
 - b. Width: Sufficient to clear frame and trim when door swings 180 degrees.
 - c. Number of Hinges: Furnish 3 hinges per leaf to 7'-5" in height. Add one for each additional 2 feet in height.
 2. Furnish non-removable pins (NRP) at all exterior out-swing doors and interior key lock doors with reverse bevels.
 3. and / or stamped retainers are not acceptable.
- B. Heavy Duty Cylindrical Locks and Latches: Schlage "ND" Series as scheduled with "Rhodes" design, fastened with through-bolts and threaded chassis hubs.
1. Provide cylindrical locksets exceeding the ANSI/BHMA A156.2 Grade 1 performance standards for strength, security, and durability in the categories below:
 - a. Abusive Locked Lever Torque Test – minimum 3,100 inch-pounds without gaining access
 - b. Offset lever pull – minimum 1,600 foot pounds without gaining access
 - c. Vertical lever impact – minimum 100 impacts without gaining access
 2. Cycle life - tested to minimum 16 million cycles per ANSI/BHMA A156.2 Cycle Test with no visible lever sag or use of performance aids such as set screws or spacers
 3. UL 10C for 4'-0" x 10'-0" 3-hour fire door.
 4. Cylinders: Refer to "KEYING" article, herein.
 5. Provide solid steel anti-rotation through bolts and posts to control excessive rotation of lever.
 6. Provide lockset that allows lock function to be changed to over twenty other common functions by swapping easily accessible parts.
 7. Provide locks with standard 2-3/4 inches (70 mm) backset, unless noted otherwise, with 1/2 inch latch throw capable of UL listing of 3 hours on a 4' x 10' opening. Provide proper latch throw for UL listing at pairs.
 8. Provide locksets with separate anti-rotation thru-bolts, and no exposed screws.
 9. Provide independently operating levers with two external return spring cassettes mounted under roses to prevent lever sag.
 10. Provide standard ASA strikes unless extended lip strikes are necessary to protect trim.
 11. Provide wired electrified options as scheduled in the hardware sets.
 - a. 12 through 24 volt DC operating capability, auto-detecting
 - b. Selectable EL (fail safe)/EU (fail secure) operating mode via switch on chassis
 - c. 0.230A (230mA) maximum current draw
 - d. 0.010A (10mA) holding current
 - e. Modular / "plug in" request to exit switch
 12. Lever Trim: Solid cast levers without plastic inserts, and wrought roses on both sides.
- C. Exit devices: Von Duprin as scheduled.
1. Provide certificate by independent testing laboratory that device has completed over 1,000,000 cycles and can still meet ANSI/BHMA A156.3 - 2001 standards.

2. All internal parts shall be of cold-rolled steel with zinc dichromate coating.
 3. Mechanism case shall have an average thickness of .140".
 4. Compression spring engineering.
 5. Non-handed basic device design with center case interchangeable with all functions.
 6. All devices shall have quiet return fluid dampeners.
 7. All latchbolts shall be deadlocking with 3/4" throw and have a self-lubricating coating to reduce friction and wear.
 8. Device shall bear UL label for fire and or panic as may be required.
 9. All surface strikes shall be roller type and utilize a plate underneath to prevent movement.
 10. Lever Trim: "Breakaway" design, forged brass or bronze escutcheon with a minimum of .130" thickness, match lockset lever design.
 11. Removable Mullions: Removable with single turn of building key. Securely reinstalled without need for key.
 12. Furnish glass bead kits for vision lites where required.
 13. All Exit Devices to be sex-bolted to the doors.
 14. Panic Hardware shall comply with CBC Section 11B.404.2.7 and shall be mounted between 34" and 44" above the finished floor surface.
 - a. Provide exit devices UL certified to meet maximum 5 pound requirements according to the California Building Code section 11B-309.4, and UL listed for Panic Exterior Fire Exit Hardware.
- D. Closers: LCN as scheduled. Place closers inside building, stairs, room, etc.
1. All door closers shall be tested to ANSI/BHMA A156.4 test requirements by a BHMA certified testing laboratory. A written certification showing successful completion of a minimum of 10,000,000 cycles must be provided.
 2. All door closers shall be fully hydraulic and have full rack and pinion action with a shaft diameter of a minimum of 11/16 inch and piston diameter of 1 inch to ensure longevity and durability under all closer applications.
 3. All parallel arm closers shall incorporate one piece solid forged steel arms with bronze bushings. 1-9/16" steel stud shoulder bolts, shall be incorporated in regular arms, hold-open arms, arms with hold open and stop built in. All other closers to have forged steel main arms for strength, durability, and aesthetics for versatility of trim accommodation, high strength and long life.
 4. All parallel arm closers so detailed shall provide advanced backcheck for doors subject to severe abuse or extreme wind conditions. This advanced backcheck shall be located to begin cushioning the opening swing of the door at approximately 45 degrees. The intensity of the backcheck shall be fully adjustable by tamper resistant non-critical screw valve.
 5. Closers shall be installed to permit doors to swing 180 degrees.
 6. All closers shall utilize a stable fluid withstanding temperature range of 120 degrees F. to -30 degrees F. without requiring seasonal adjustment of closer speed to properly close the door.
 7. Provide the manufactures drop plates, brackets and spacers as required at narrow head rails and special frame conditions. NO wood plates or spacers will be allowed.
 8. Maximum effort to operate closers shall not exceed 5 lbs., such pull or push effort being applied at right angles to hinged doors. Compensating devices or automatic door operators may be utilized to meet the above standards. When fire doors are required, the maximum effort to operate the closer may be increased but shall not exceed 15 lbs. when specifically approved by fire marshal. All closers shall be adjusted to operate with the minimum amount of opening force and still close and latch the door. These forces do not apply to the force required to retract latch bolts or disengage other devices that hold the door in a closed position. Per 11B-404.2.8.1, door shall take at least 5 seconds to move from an open position of 90 degrees to a position of 12 degrees from the latch jamb.
- E. Flush Bolts & Dust Proof Strikes: Automatic Flush Bolts shall be of the low operating force design. Utilize the top bolt only model for interior doors where applicable and as permitted by testing procedures.
1. Manual flush bolts only permitted on storage or mechanical openings as scheduled.

2. Provide dust proof strikes at openings using bottom bolts.
- F. Door Stops:
1. Unless otherwise noted in Hardware Sets, provide floor type with appropriate fasteners. Where wall type cannot be used, provide floor type. If neither can be used, provide overhead type.
 2. Do not install floor stops more than four (4) inches from the face of the wall or partition (CBC Section 11B-307).
 3. Overhead stops shall be made of stainless steel and non-plastic mechanisms and finished metal end caps. Field-changeable hold-open, friction and stop-only functions.
- G. Protection Plates: Fabricate either kick, armor, or mop plates with four beveled edges. Provide kick plates 10" high and 1-1/2" less door width (LDW). Sizes of armor and mop plates shall be listed in the Hardware Schedule. Furnish with machine or wood screws of bronze or stainless to match other hardware.
- H. Thresholds: As Scheduled and per details.
1. Thresholds shall not exceed 1/2" in height, with a beveled surface of 1:2 maximum slope.
 2. Set thresholds in a full bed of butyl-rubber or polyisobutylene mastic sealant complying with requirements in Division 7 "Thermal and Moisture Protection".
 3. Use 1/4" fasteners, red-head flat-head sleeve anchors (SS/FHSL).
 4. Thresholds shall comply with CBC Section 11B-404.2.5.
- I. Seals: Provide silicone gasket at all rated and exterior doors.
1. Fire-rated Doors, Resilient Seals: UL10C Classified complies with NFPA 80 & NFPA 252. Coordinate with selected door manufacturers' and selected frame manufacturers' requirements.
 2. Fire-rated Doors, Intumescent Seals: Furnished by selected door manufacturer. Furnish fire-labeled opening assembly complete and in full compliance with UL10C Classified complies with NFPA 80 & NFPA 252. Where required, intumescent seals vary in requirement by door type and door manufacture -- careful coordination required.
 3. Smoke & Draft Control Doors, Provide UL10C Classified complies with NFPA 80 & NFPA 252 for use on "S" labeled Positive Pressure door assemblies.
- J. Door Shoes & Door Top Caps: Provide door shoes at all exterior wood doors and top caps at all exterior out-swing doors.
- K. Silencers: Furnish silencers for interior hollow metal frames, 3 for single doors, 2 for pairs of doors. Omit where sound or light seals occurs, or for fire-resistive-rated door assemblies.

2.3 KEYING

- A. Permanent Primus cores to be furnished and installed by owner.
- B. Furnish construction keying for doors requiring locking during construction.
- C. Furnish one Schlage cabinet lock for each cabinet door or drawer so designated on the drawings or keying schedule to match the masterkey system.
 1. Furnish CL771R for use with FSIC Schlage cylinders.

2.4 FINISHES

- A. Generally to be satin chrome US26D (626 on brass/bronze and 652 on steel) unless otherwise noted.

- B. Furnish push plates, pull plates and kick or armor plates in satin stainless steel US32D (630) unless otherwise noted.
- C. Door closers shall be powder-coated to match other hardware, unless otherwise noted.
- D. Aluminum items to be finished anodized aluminum except thresholds which can be furnished as standard mill finish.

2.5 FASTENERS

- A. Screws for strikes, face plates and similar items shall be flat head, countersunk type, provide machine screws for metal and standard wood screws for wood.
- B. Screws for butt hinges shall be flathead, countersunk, full-thread type.
- C. Fastening of closer bases or closer shoes to doors shall be by means of sex bolts and spray painted to match closer finish.
- D. Provide expansion anchors for attaching hardware items to concrete or masonry.
- E. All exposed fasteners shall have a phillips head.
- F. Finish of exposed screws to match surface finish of hardware or other adjacent work.
- G. All Exit Devices and Lock Protectors shall be fastened to the door by the means of sex bolts or through bolts.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify that doors and frames are square and plumb and ready to receive work and dimensions are as instructed by the manufacturer.
- B. Beginning of installation means acceptance of existing conditions.
- C. Fire-Rated Door Assembly Inspection: Upon completion of the installation, all fire door assemblies shall be inspected to confirm proper operation of the closing device and latching device and that only the manufacturer's furnished fasteners are used for installation and that it meets all criteria of a fire door assembly per NFPA 80 (Standard for Fire Doors and Other Opening Protectives) 2013 Edition. A written record shall be maintained and transmitted to the Owner to be made available to the Authority Having Jurisdiction (AHJ). The inspection of the swinging fire doors shall be performed by a certified FDAI (Fire Door Assembly Inspector) with knowledge and understanding of the operating components of the type of door being subjected to the inspection. The record shall list each fire door assembly throughout the project and include each door number, an itemized list of hardware set components at each door opening, and each door location in the facility.

3.2 INSTALLATION

- A. Install hardware in accordance with manufacturer's instructions and requirements of DHI.
- B. Use the templates provided by hardware item manufacturer.
- C. Mounting heights for hardware shall be as recommended by the Door and Hardware Institute. Operating hardware will to be located between 34" and 44" AFF.

- D. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.
- E. Drill and countersink units that are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.
- F. Set thresholds for exterior doors in full bed of butyl-rubber sealant.
- G. If hand of door is changed during construction, make necessary changes in hardware at no additional cost.
- H. Hardware Installer shall coordinate with security contractor to route cable to connect electrified locks, panic hardware and fire exit hardware to power transfers or electric hinges at the time these items are installed so as to avoid disassembly and reinstallation of hardware.
- I. Hardware Installer shall also be present with the security contractor when the power is turned on for the testing of the electronic hardware applications. Installer shall make adjustments to solenoids, latches, vertical rods and closers to insure proper and secure operation.
- J. All wiring for electro-mechanical hardware mounted on the door shall be connected through the power transfer and terminated in the interface junction box specified for in the Electrical Section.
- K. Conductors shall be minimum 18 gage stranded, multicolored. A minimum 12 in. loop of conductors shall be coiled in the interface junction box. Each conductor shall be permanently marked with its function.
- L. If a power supply is specified in the hardware sets, all conductors shall be terminated in the power supply. Make all connections required for proper operation between the power supply and the electro-mechanical hardware. Provide the proper size conductors as specified in the manufacturer's technical documentation.

3.3 ADJUST AND CLEAN

- A. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Replace units which cannot be adjusted to operate freely and smoothly as intended for the application made.
- B. Clean adjacent surface soiled by hardware installation.
- C. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy, return to that work area and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.
- D. Instruct Owner's Personnel in proper adjustment and maintenance of hardware finishes, during the final adjustment of hardware.
- E. Continued Maintenance Service: Approximately six months after the completion of the project, the Contractor accompanied by the Architectural Hardware Consultant, shall return to the project and re-adjust every item of hardware to restore proper functions of doors and hardware. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures. Replace hardware items which have deteriorated or failed due to faulty design, materials or installation of hardware units. Prepare a written report of current and predictable problems (of substantial nature) in the performance of the hardware.

3.4 HARDWARE LOCATIONS

- A. Conform to CCR, Title 24, Part 2; and ADAAG; and the drawings for access-compliant positioning requirements for the disabled.

3.5 Field quality control

- A. Hardware supplier is responsible for providing the services of an Architectural Hardware Consultant (AHC) or a proprietary product technician to inspect installation and certify that hardware and its installation have been furnished and installed in accordance with manufacturers' instructions and as specified herein.

3.6 SCHEDULE

- A. The items listed in the following schedule shall conform to the requirements of the foregoing specifications.
- B. While the hardware schedule is intended to cover all doors, and other movable parts of the building, and establish type and standard of quality, the contractor is responsible for examining the Plans and Specifications and furnishing proper hardware for all openings whether listed or not. If there are any omissions in hardware groups in regard to regular doors they shall be called to the attention of the Architect prior to bid opening for instruction; otherwise, list will be considered Complete. No extras will be allowed for omissions.
- C. The Door Schedule on the Drawings indicates which hardware set is used with each door.

END OF SECTION

SECTION 087113 - AUTOMATIC DOOR OPERATORS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Low-energy door operators and activators for swinging doors.

1.2 DEFINITIONS

- A. AAADM: American Association of Automatic Door Manufacturers.
- B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
- C. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.
- D. For automatic door terminology, see BHMA A156.19 for definitions of terms.

1.3 COORDINATION

- A. Coordinate sizes and locations of recesses in concrete floors for recessed control mats that control automatic door operators. Concrete, reinforcement, and formwork requirements are specified elsewhere.
- B. Templates: Distribute for doors, frames, and other work specified to be factory prepared and reinforced for installing automatic door operators.
- C. Coordinate hardware for doors with operators to ensure proper size, thickness, hand, function, and finish.
- D. Electrical System Roughing-in: Coordinate layout and installation of automatic door operators with connections to power supplies and access-control system.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic door operators.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For automatic door operators.
 - 1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
 - 2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Indicate locations of activation and safety devices.
 - 4. Include diagrams for power, signal, and control wiring.
 - 5. Include plans, elevations, sections, and attachment details for guide rails.
- C. Samples: For each exposed product and for each color and texture specified, manufacturer's standard size.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of automatic door operator.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For automatic door operators, safety devices, and control systems, to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer for installation and maintenance of units required for this Project.
- B. Certified Inspector Qualifications: Certified by AAADM.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of automatic door operators that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty or sporadic operation of automatic door operator, including controls.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering or use.
 - 2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide listed products by the following:
 - 1. LCN, an Allegian company (Campus Standard, no substitutions)the following:
- B. Basis-of-Design Products:
 - 1. Single Door: LCN Senior Swing Series 9540
 - 2. Double Door, Simultaneous: LCN Senior Swing Series 9550
 - 3. Double Door, Independent: LCN Senior Swing Series 9560
- C. Automatic door operators shall be surface mounted and the operator housing shall span the full-length of the opening. All wiring shall be concealed in the adjacent storefront or structural system. Exposed conduit, wire-mold, or visible electrical pathways are not acceptable.

2.2 AUTOMATIC DOOR OPERATORS, GENERAL

- A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated; and according to UL 325. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.

1. Wind Load: Provide door operators on exterior doors that will open and close doors and maintain them in fully closed position when subjected to Project design wind load as indicated on the Drawings.
- B. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.
- C. Hinges: See Section 087100 "Door Hardware" for hinge type for each door that door operator shall accommodate.
- D. Cover for Surface-Mounted Operators: Fabricated from 0.125-inch- thick, extruded or formed aluminum; continuous over full width of operator-controlled door opening including door jambs; with enclosed end caps, provision for maintenance access, and fasteners concealed when door is in closed position.
- E. Brackets and Reinforcements: Fabricated from aluminum with nonstaining, nonferrous shims for aligning system components.
- F. Electrical Components, Devices, and Accessories: Concealed; Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 LOW-ENERGY DOOR OPERATORS

- A. Standard: BHMA A156.19.
- B. Performance Requirements:
 1. Opening Force if Power Fails: Not more than 15 lbf required to release latch if provided, not more than 30 lbf required to manually set door in motion, and not more than 15 lbf required to fully open door.
 2. Entrapment-Prevention Force: Not more than 15 lbf required to prevent stopped door from closing or opening.
- C. Configuration: Operator to control single swinging door.
 1. Traffic Pattern: Two way.
 2. Operator Mounting: Surface.
- D. Configuration: Operator to control pair of swinging doors.
 1. Traffic Pattern: Two way.
 2. Operator Mounting: Surface.
- E. Operation: Low-energy opening and power-assisted spring closing. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
 1. All door actuators shall be hard-wired. Wireless (battery operated) door actuators are not acceptable.
 2. All wiring for the Automatic Entrance components shall be concealed in the adjacent storefront, framing, or structural system. Exposed conduit, wire-mold, or electrical pathways are not acceptable.
 3. All automatic operators shall be surface mounted and enclosed in an extruded aluminum case extending the full width of the door frame. Access to the front of operator shall be obtained by easily removing the casing. In-ground and overhead concealed door operators are not acceptable.
 4. A keyed shut off switch keyed to the Owner's master key system shall be provided to shut off power to the outside push pads after normal hours of operation. The inside automatic door actuator must always momentarily unlock and open the automated door.

5. Electrified exit devices, locksets or strikes shall work in conjunction with door operators.
 6. Card access components shall be interfaced with door operators to allow outside actuator to open door when door is unlocked. Inside door actuator should always momentarily unlock momentarily unlock and open the automated door.
- F. Operating System: Electromechanical.
- G. Microprocessor Control Unit: Solid-state controller.
- H. Features:
1. Adjustable opening and closing speed.
 2. Adjustable opening and closing force.
 3. Adjustable backcheck.
 4. Adjustable hold-open time from zero to 30 seconds.
 5. Adjustable time delay.
 6. Adjustable acceleration.
 7. Obstruction recycle.
 8. On-off/hold-open switch to control electric power to operator; key operated.
- I. Activation Device: Push-plate switch on each side of door to activate door operator.
1. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message. Refer to product indicated below.
 2. Access control system shall be interfaced with automatic operator so that when door is unlocked, the outside actuator opens door. When door is locked, the outside actuator is inhibited and shall not function. The inside actuator must always temporarily unlock and open the door.

2.4 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Extrusions: ASTM B 221.
 2. Sheet: ASTM B 209.
- B. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.5 CONTROLS

- A. General: Provide controls, including activation and safety devices, according to BHMA standards; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated. Coordinate the following activation and safety devices with door operation and door operator mechanisms as indicated.
- B. Switch Bollard (Pedestal) Post:
1. Configuration: Square, 6-by-6-inch by 48-inch-high by 0.125-inch thick wall, mill aluminum with 2-coat PVDF finish to match adjacent curtain wall. Welded flat aluminum top, drainable. Rear concealed access panel.
 - a. Mounting: Surface mount with concealed mounting plate.
 - b. Preps: Two, for one accessibility vertical push-plate switch and one card reader, unless otherwise indicated. Verify configuration with Architect prior to ordering.
 - c. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Wikk Industries.
 - 2) Or equal.

- C. Card-Reader Access-Control Switch: Recessed-mounted, door-control switch with card-reader-controlled actuator; enclosed in 4-by-4-inch box where indicated.
 - 1. Face-Plate Material: Stainless steel as selected by Architect from manufacturer's full range.
 - 2. Functions: Two-way automatic, one-way exit, and off.
 - 3. Mounting:
 - a. At entry side, mount on adjacent wall where indicated.
 - 4. Integrate door activation system with access control devices specified in Division 28.
- D. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message.
 - 1. Configuration: Vertically-mounted, 36-inch-high, low profile, rectangular push plate with 2-by-4-inch junction box.
 - a. Mounting: Provide the following as indicated:
 - 1) Surface mounted on wall on egress side of door opening.
 - 2) Surface mounted on wall on entry side of door opening.
 - 3) Bollard mounted on entry side of door opening.
 - b. Reference Standard: Meet or exceed CBC Section 11B-404.3.5.
 - c. Basis-of-Design Product:
 - 1) Ingress'r I36-3 as manufactured by Wikk Industries, or equal by one of the following:
 - a) LCN.
 - b) Or equal.
 - 2. Push-Plate Material: Stainless steel.
 - 3. Message: International symbol of accessibility and "Push to Open;" blue.
- E. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.6 FABRICATION

- A. Factory fabricate automatic door operators to comply with indicated standards.
- B. Form aluminum shapes before finishing.
- C. Fabricate exterior components to drain condensation and water passing joints within operator enclosure to the exterior.
- D. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.

2.7 ACCESSORIES

- A. Signage: As required by cited BHMA standard for type of door and its operation.
 - 1. Application Process: Operator manufacturer's standard process.
 - 2. Provide sign materials with instructions for field application when operators are installed.

2.8 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.
- B. Apply organic finishes to formed metal after fabrication unless otherwise indicated.

- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

2.9 ALUMINUM FINISHES

- A. General: Match adjacent entrance framing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, door and frame preparation and reinforcements, and other conditions affecting performance of automatic door operators.
- B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic door operator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install automatic door operators according to manufacturer's written instructions and cited BHMA standard for type of door operation and direction of pedestrian travel, including signage, controls, wiring, remote power units if any, and connection to building's power supply.
 - 1. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion.
 - 2. Install operators true in alignment with established lines and door geometry without warp or rack. Anchor securely in place.
- B. Controls: Install activation and safety devices according to manufacturer's written instructions and cited BHMA standard for operator type and direction of pedestrian travel. Connect control wiring according to Division 26 Section for "Low-Voltage Electrical Power Conductors and Cables."
- C. Access-Control System: Connect operators to access-control system as specified in Division 28 Section for "Access Control."
- D. Signage: Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.

3.3 ADJUSTING

- A. Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 - 1. Adjust operators on exterior doors for weathertight closure.
- B. After completing installation of automatic door operators, inspect exposed finishes on doors and operators. Repair damaged finish to match original finish.
- C. Readjust automatic door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic door operators.

END OF SECTION

SECTION 088000 - GLAZING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
 - a. Doors.
 - b. Aluminum framing.
 - c. Interior borrowed lites and glass panels.
 - 2. Glazing sealants and accessories.
 - 3. Acoustic control products.
- B. Related Requirements:
 - 1. Section 088813 "Fire-Resistant Glazing" for glass used in fire-rated assemblies.

1.2 DEFINITIONS

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Fabrication: Using primary glass in the production of single pane glass products such as coated, laminated and heat treated glass. Can be done by either the Glass Manufacturer or the Glazing Product Manufacturer.
- C. Glazing Product Manufacturer: Firm that uses fabricated glass in the production of insulating glass (multiple panes of glass).
- D. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C1036.
- E. Large Glass Lites and Insulating Glass Units: Over 55 SF.

1.3 PERFORMANCE REQUIREMENTS

- A. Global Warming Potential: Comply with Section 018113.71 CALGreen Non-Residential Mandatory Measures for all flat glass. Do not exceed maximum allowable GWP as specified. Submit Type III EPD's to demonstrate compliance.

1.4 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review temporary protection requirements for glazing during and after installation.
 - 3. Review glazing systems included in Project and specified in other Sections.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of glass product and glazing material specified.
- B. Shop Drawings:
 - 1. Submit shop drawings of glazing details. Draw details minimum full size (twice full size preferred) and indicate dimensions, tolerances, and materials.
 - 2. Submit Shop Drawings showing application of acoustic control product applied to existing window framing.
- C. Glass Samples:
 - 1. Each type of insulating, no less than 12 by 12 inches, including type of edge seal, spacer, and corner construction of spacer. Identify specific type of reflective and Low-e coated glass, coated surfaces, and exterior face of unit.
- D. Exposed Glazing Accessory Samples: For gaskets, sealants, and colored spacers, in 12 inch lengths. Install sealant samples between two strips of material representative in color of the adjoining framing system after sealant color selections have been made.
- E. Other Glazing Accessory Samples, as applicable:
 - 1. Corner construction of compression gasket for dry glazing with each leg approximately 6 inches long.
 - 2. Tape sealant, 6 inches long.
 - 3. Compression wedge, 6 inches long.
 - 4. Channel gasket, 6 inches long.
 - 5. Bed gasket, 6 inches long.
 - 6. Face shim or spacer.
 - 7. Setting block.
 - 8. Edge block.
 - 9. Compressible filler.
 - 10. Open cell filler.
 - 11. Acoustic control products.
- F. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.7 INFORMATIONAL SUBMITTALS

- A. Product Certificates:
 - 1. Upon request, submit reports indicating results of distortion and flatness monitoring and inspection for laminated and heat treated glass and for continuous on-line color measurement via spectrophotometer inspection device.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency for glazing sealants, and glazing gaskets.
 - 1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.
 - 1. Level 1 Minimum: All installers.

- B. Provide the following upon request:
 - 1. Qualification Data: For installer.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F. Do not install sealants to wet or frost covered surfaces.

1.11 WARRANTY

- A. General: During the warranty period, restore defective Work to the standard of the Contract Documents, including all labor, materials, refinishing and other costs incidental to the Work. Restore Work found to be defective as defined in the Contract Documents.
- B. Installation: Glazing systems installation shall be warranted for a period of five years against defective materials and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Products: Provide glass products as indicated, or comparable by one of the following:
 - 1. Guardian Glass; SunGuard.
 - 2. Oldcastle BuildingEnvelope.
 - 3. Pilkington North America.
 - 4. Vetrotech Saint-Gobain.
 - 5. Viracon, Inc.
 - 6. Vitro Architectural Glass (formerly PPG).
- B. Glazing Unit Fabricators: Subject to compliance with requirements, available fabricators offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Agnora.
 - 2. Cristacurva.
 - 3. JE Berkowitz, LP.
 - 4. Oldcastle BuildingEnvelope.
 - 5. Pilkington North America.
 - 6. Rochester Insulating Glass.
 - 7. Tvitec.
 - 8. Viracon, Inc.
 - 9. OnyxSolar.

- C. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type.
- D. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined according to the IBC and ASTM E1300.
 - 1. Design Pressures:
 - a. As indicated on Drawings.
 - b. Design Pressures: Determine design wind pressures and seismic loads applicable to Project according to ASCE/SEI 7, based on heights above grade indicated on Drawings.
 - 1) Wind and Seismic Design Data: As indicated on Drawings.
 - 2. All glass and glazed assemblies below 42 inches from occupied floor surface shall be designed to withstand occupant load at all occupied locations. These loads can be imposed from the inside or outside dependent on the occupied floor surface adjacent to the glazing. Loads include but are not limited to:
 - a. 50 plf at 42 inch high from occupied floor surface.
 - b. 200 lbf point load 42 inches high from floor surface.
 - 3. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch, whichever is less.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
 - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces
- D. Safety Glazing:
 - 1. CPSC 16 CFR part 1201, testing requirements of ANSI Z97.1, and listed in the SGCC Certified Products Directory with appropriate SGCC certification mark or label permanently affixed.
 - 2. Furnish safety glass for glass occurring in doors and sidelights, and where indicated and further required by authorities having jurisdiction.

2.3 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
 - 1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
 - 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

1. All permanent marks and/or labels should be placed in the vicinity of the glass where the label is not obscured by the glass bite, gasket, sealant or other anchoring/glazing material. End text at least 3 mm from all site lines of the fenestration glazing to allow for readability.
- C. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.
 1. Minimum Glass Thickness for Exterior Lites: 6 mm.
- D. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass.

2.4 GLASS PRODUCTS

- A. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.
- B. Ultraclear Float Glass: ASTM C1036, Type I, Class I (clear), Quality-Q3; and with visible light transmission of not less than 91 percent.
 1. Products Subject to compliance with requirements, provide one of the following:
 - a. AFG Industries, Inc.; Krystal Klear.
 - b. Guardian Industries Corp.; Ultrawhite.
 - c. Pilkington North America; Optiwhite.
 - d. Vitro Architectural Glass; Starphire.
- C. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Quality-Q3.
 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
 2. Distortion Tolerances:
 - a. Maximum Overall Bow: 0.2% of smallest edge length.
 - b. Local Bow in any direction: Shall not exceed 1/32-inch per lineal foot.
 - c. Edge Lift: 0.008" (0.2 mm) for uncoated float glass from 6 mm to 12 mm in thickness.
 - d. Roller Wave:
 - 1) Glass Center:
 - a) Maximum 0.006 inches per 12 inches• length measured across the surface of the glass at any angle or location.
 - b) Maximum 0.003 inch from peak to valley within the main body of the sheet.
 - 2) Maximum 0.006 inch within 10.5 inches of a leading or trailing edge.
 - e. Millidiopter measurement shall be not more than plus or minus 100-mD (millidiopter) over 95-percent of the glass surface for clear or ultraclear float glass 1/4" to 3/8" thick.
 - f. Millidiopter measurement shall be not more than plus or minus 125-mD (millidiopter) over 95-percent of the glass surface all other glazing types.
 - g. Test Method: GANA "TD 04-03-26 Standard Test Method for In Plant Measurement of Roll Wave in Heat Treated Architectural Glass", or ASTM C1651.
 - h. Anisotropy (Leopard Spots and/or Iridescence): Minimize, demonstrate, and monitor the Anisotropy of all units of a given glass type to provide a reasonably uniform and homogenous strain pattern based on the following procedure. The same oven type shall be used for all units of a given glass type.
 - 1) Provide an anisotropy control process benchmarking process.
 - 2) Provide three (3) reference units for each glass type for setting allowable anisotropy. Minimum size of units is 5'-0" x 5'-0".

- 3) View the reference units on site in clear sky conditions with direct sunlight at a time of the day when the incidence of polarized light is predominant. Provide a large black fabric sheet that can be placed over the viewed panel for detailed assessment of the degree of anisotropy.
- 4) Factors that affect acceptance are the consistency of the quench marks and lack of patchy or cloudy concentrations of anisotropic effects.
- 5) The approved glass samples become the control samples, and are divided up and sent to glass fabricator, façade manufacturer, and building site.

D. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Quality-Q3.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. For uncoated glass, comply with requirements for Condition A.
3. For coated vision glass, comply with requirements for Condition C (other coated glass).
4. Limit Kind HS surface compression to upper end of ASTM C 1048 range, 7,500 psi.
5. Distortion Tolerances:
 - a. Roller Wave: Maximum 0.003 inch from peak to valley within the main body of the sheet and maximum 0.008 inch within 10.5 inches of a leading or trailing edge.
 - b. Localized Warp: Maximum 0.03 inch over any 12 inch span, but limited to 0.31 inch.
 - c. Edge Lift: 0.008" (0.2 mm) for uncoated float glass from 6 mm to 12 mm in thickness.
 - d. Roller Wave
 - 1) Glass Center:
 - a) Maximum 0.006 inches per 12 inches• length measured across the surface of the glass at any angle or location.
 - b) Maximum 0.003 inch from peak to valley within the main body of the sheet.
 - 2) Maximum 0.008 inch within 10.5 inches of a leading or trailing edge.
 - e. Millidiopter measurement shall be not more than plus or minus 100-mD (millidiopter) over 95-percent of the glass surface for clear or ultraclear float glass 1/4" to 3/8" thick.
 - f. Millidiopter measurement shall be not more than plus or minus 125-mD (millidiopter) over 95-percent of the glass surface all other glazing types.
 - g. Test Method: GANA "TD 04-03-26 Standard Test Method for In Plant Measurement of Roll Wave in Heat Treated Architectural Glass", or ASTM C1651.
 - h. Anisotropy: Anisotropy or "Leopard Spots", a multi-color pattern known to be associated with heat-treated glass under certain polarized light conditions, shall be kept to an absolute minimum. All units of a given glass type must demonstrate after fabrication a reasonable uniform and homogenous strain pattern. The same oven type shall be used for all units of a given glass type.
 - 1) The risk of occurrence of anisotropy shall be minimized and the glass supplier shall provide an anisotropy control process benchmarking process.
 - 2) The reference units should be viewed on site in clear sky conditions with direct sunlight at a time of the day when the incidence of polarized light is predominant. The fabricator should provide a large black fabric sheet that can be placed over the viewed panel for detailed assessment of the degree of anisotropy.
 - 3) Factors that affect acceptance are the consistency of the quench marks and lack of patchy or cloudy concentrations of anisotropic effects.
 - 4) The approved glass samples become the control samples, and are divided up and sent to glass fabricator, façade manufacturer, and building site.

2.5 PRIVACY FILM

- A. Privacy Film Overlay: Translucent, dimensionally stable, cast PVC film, with pressure-sensitive, clear adhesive back for adhering to glass and releasable protective backing; opacity and pattern as indicated.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. 3M.
 - b. Llumar.
 - c. Skyline Design
2. Basis-of-Design Products: As indicated on Drawings.

2.6 GLAZING GASKETS

- A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following products compatible with glazing sealant:
1. EPDM complying with ASTM C 864.
 2. Silicone complying with ASTM C 1115.
 3. Thermoplastic polyolefin rubber complying with ASTM C 1115.
 4. Compression wedge for dry glazing system: of shape and size to compress the exterior compression gasket a minimum of 25 percent, and as recommended by glazing and sealing systems manufacturer.
 5. Provide gaskets that are compatible with glazing sealants and will provide for silicone adhesion.
- B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned EPDM, silicone, or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.
1. Bed gasket for wet glazing system: continuous with pressure sensitive adhesive 1 side, designed to be compressed 25-40 percent in the opening.
 2. Compression gasket for dry glazing system: shape as required to be compressed in place a minimum of 25 percent and of one-piece construction with factory-assembled frames with injection-molded, vulcanized corners; produced oversize in opening dimension, as determined by measurements, to insure compression at corners but within limits so that compression does not create a "pucker".
 3. Channel gasket: continuous channel of shape and dimensions for application in the opening with specified glazing.
 4. Provide gaskets that are compatible with glazing sealants and will provide for silicone adhesion.

2.7 GLAZING SEALANTS

- A. General:
1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 3. Sealant shall have a VOC content of 250 g/L or less.
 4. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.
- B. Glazing Sealant:
1. Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Dow Corning Corporation; 790.
 - 2) GE Construction Sealants; Momentive Performance Materials Inc.; SilPruf LM SCS2700.
 - 3) Tremco Incorporated; Spectrem 1.

- b. Applications: As recommended by glass and frame manufacturers.
- 2. Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 50, Use NT.
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Dow Corning Corporation; 791 or 795.
 - 2) GE Construction Sealants; Momentive Performance Materials Inc.; SilGlaze II SCS2800, SilPruf NB SCS9000, or SilPruf SCS2000.
 - 3) Tremco Incorporated; Spectrem 2 or Spectrem 3.
 - b. Applications: As recommended by glass and frame manufacturers.
- 3. Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 25, Use NT.
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Dow Corning Corporation; 799.
 - 2) GE Construction Sealants; Momentive Performance Materials Inc.; UltraGlaze SSG4000 or UltraGlaze SSG4000AC.
 - 3) Tremco Incorporated; Tremsil 600.
 - b. Applications: As recommended by glass and frame manufacturers.

2.8 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
 - 1. AAMA 804.3 tape, where indicated.
 - 2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
 - 3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
 - 1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
 - 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.
- C. For openings up to 75 united inches, use unshimmed tape. For openings over 75 united inches, use pre-shimmed tape.

2.9 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, with requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
 - 1. Each block shall be properly sized for load, as wide or wider than glazing, no less than 4 inches long; profile to permit friction fit, dart insertion into metal chair, or pressure sensitive adhesive one side to fix block in glazing opening.

- D. Spacers: Elastomeric blocks or continuous extrusions of 40 to 60 Shore "A" durometer hardness to maintain glass lites in place for installation indicated.
 - 1. Profile to permit friction fit, dart insertion or pressure sensitive adhesive one side to fix shim or spacer in location.
- E. Edge Blocks: Elastomeric material of 40 to 60 Shore "A" durometer hardness to limit glass lateral movement (side walking).
 - 1. Each block shall be a minimum of 4 inches long, as wide as glazing, placed in the vertical glazing channel, and sized to allow a nominal 1/8-inch clearance between glass edge and installed block; profile to permit friction fit or pressure sensitive adhesive one side to fix block in glazing opening.
- F. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.
- G. Open Cell Filter: Reticulated flexible polyester urethane foam having 20 pores per inch, sized at least 1 inch larger in dimension than weephole, of cross section to provide 15 to 25 percent compression for friction fit and as manufactured by Foam Division, Scott Paper Co.; H-O Products Corp. or approved comparable product.
- H. Bond breaker : Heavy duty, 11-mil minimum thickness, colored, polyethylene or teflon, self-adhesive bond breaker of type recommended by sealant manufacturer and suitable for conditions of usage. Liquid bond breaker is not permitted.

2.10 ACOUSTIC CONTROLINFILL UNITS

- A. Product: Quantapanel; Model 602-PW.
 - 1. Application: Podcast room acoustical treatment on existing windows.
 - 2. Glass: Pyrolitic low-e glass; 6 mm, minimum.

2.11 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
- B. Edge: Omit low-e coating at IGU edge continuous for full depth of selant and spacer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep systems.
 - 3. Minimum required face and edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.3 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
 - 1. Locate one quarter of glass width from each corner, but with block edge nearest corner no closer than 6 inches from corner, unless otherwise specified or required by glass manufacturer.
 - 2. Insulating glass used in sloped glazing shall have both panes supported by setting blocks.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is larger than 50 inches.
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
- K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

- L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.
- M. Acoustic Control Units: Install in accordance with manufacturer's instructions and approved Shop Drawings.

3.4 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until right before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or backings in place and in position to control location and depth of installed sealant for required sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a smooth surface and on exterior applications provide a wash away from glass.

3.7 CLEANING AND PROTECTION

- A. Immediately after installation remove nonpermanent labels and clean surfaces.
- B. Protect glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.
- C. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
 - 1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
- D. Remove and replace glass that is damaged during construction period.
- E. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

3.8 MONOLITHIC GLASS SCHEDULE

- A. Glass Type IGL-1: Clear float glass.
 - 1. Glass Type: Ultra-clear float glass. Fully tempered.
 - 2. Minimum Thickness: 12.0 mm.
 - 3. Safety glazing and labeling required at hazardous glass locations as defined in CBC Section 2406.4.

3.9 INSULATING-GLASS TYPES

- A. Glass Type IGL-2: Acoustic insulated glass assembly.
 - 1. Overall Unit Thickness: 2-3/4 inch (25 mm)(16 mm).
 - 2. Thickness of Each Glass Lite: 9.0 mm
 - 3. Outdoor Lite: Ultra-clear, heat-strengthened or fully tempered float glass to meet performance requirements.
 - 4. Interspace Content: 2-inch, air.
 - 5. Indoor Lite: Ultra-clear, heat-strengthened or fully tempered float glass to meet performance requirements.
 - 6. Mounting: Refer to Drawings.
- B. Glass Type GL-1: Low-e-coated, clear insulating glass.

1. Basis-of-Design Glass: Vitro Architectural Glass Solarban 90, or equal.
2. Overall Unit Thickness: 1 inch.
3. Thickness of Each Glass Lite: 6.0 mm
4. Outdoor Lite: Clear, low-e, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements.
5. Interspace Content: 1/2-inch, air.
6. Indoor Lite: Clear, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements
7. Low-E Coating: #2 surface.
8. Winter U-Value (air): 0.29 with warm edge spacer.
9. Visible Light Transmittance: 51 percent
10. SHGC: 0.23
11. Safety glazing and labeling required at hazardous glass locations as defined in CBC Section 2406.4.

C. Glass Type GL-2: Low-e-coated, clear insulating spandrel glass.

1. Basis-of-Design Glass: Match GL-1
2. Overall Unit Thickness: 1 inch.
3. Thickness of Each Glass Lite: 6.0 mm
4. Outdoor Lite: Clear, low-e, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements.
5. Interspace Content: 1/2-inch, air.
6. Indoor Lite: Tinted, coated, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements
7. Low-E Coating: #2 surface.
8. Opaque Coating Location: Fourth surface.
9. Safety glazing and labeling required at hazardous glass locations as defined in CBC Section 2406.4.

D. Glass Type GL-3: Low-e-coated, clear insulating frosted glass.

1. Basis-of-Design Glass: Match GL-1
2. Overall Unit Thickness: 1 inch.
3. Thickness of Each Glass Lite: 6.0 mm
4. Outdoor Lite: Clear, low-e, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements.
5. Interspace Content: 1/2-inch, air.
6. Indoor Lite: Clear, coated, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements
7. Low-E Coating: #2 surface.
8. Ceramic Coating Color and Pattern: As selected by Architect from manufacturer's full range
9. Ceramic Coating: #4 surface.
10. Safety glazing and labeling required at hazardous glass locations as defined in CBC Section 2406.4.

E. Glass Type GL-4: Low-e-coated, clear insulating glass with privacy film overaly.

1. Basis-of-Design Glass: Match GL-1
2. Overall Unit Thickness: 1 inch (25 mm)(16 mm).
3. Thickness of Each Glass Lite: 6.0 mm
4. Outdoor Lite: Clear, low-e, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements.
5. Interspace Content: 1/2-inch, air.
6. Indoor Lite: Clear, annealed, heat-strengthened, or fully tempered float glass to meet performance requirements
7. Low-E Coating: #2 surface.
8. Film Overaly Surface: #3.
9. Safety glazing and labeling required at hazardous glass locations as defined in CBC Section 2406.4.

END OF SECTION

SECTION 088813 - FIRE-RESISTANT GLAZING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fire-protection-rated glazing.

1.2 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include manufacturer's installation instructions and standard details to ensure fire-resistance continuity.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of glass and glazing product, from manufacturer, indicating glass is intended for specific use indicated.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.
- B. Listings and Labels - Fire Rated Assemblies: Under current follow-up service by Underwriters Laboratories (ULI) maintaining a current listing or certification. Label assemblies accordance with limits of manufacturer's listing.
- C. Provide the following upon request:
 - 1. Qualification Data: For installer.
 - 2. Test reports for fire-rating listing of glass.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install fire-resistant glazing until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature conditions at occupancy levels during the remainder of the construction period.

1.8 WARRANTY

- A. Manufacturer's Special Warranty on Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organization below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
- B. Safety Glazing Labeling: Permanently mark glazing with certification label of the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, glass thickness, and safety glazing standard with which glass complies.
- C. Each type of fire rated glass and framing shall be provided by a single-source manufacturer. Distributors of fire rated glass and framing are not to be considered as manufacturers. Materials for the project should be shipped together in the same shipment on the same truck.

2.2 FIRE-PROTECTION-RATED SAFETY GLAZING - CLEAR

- A. Fire-Protection-Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on positive-pressure testing according to NFPA 257 or UL 10, including the hose-stream test, and shall comply with NFPA 80.
- B. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, fire-resistance rating in minutes, and that the glazing is permitted for use in fire rated openings and has passed the hose-stream test.
- C. Ceramic Glazing, Type IGL-4: Glass made from two plies of polished clear ceramic glass.
1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
 - a. Technical Glass Products; FireLite Plus, Premium grade (Basis-of-Design), or Architect approved equal by one of the following:
 - 1) Interedge Technologies by AGC Flat Glass.
 - 2) SaftiFirst Fire Rated Glazing Solutions.
 - 3) Schott North America, Inc.
 - 4) Vetrotech Saint-Gobain.
 2. Note: This product does not meet radiant heat barrier test standards of ASTM E 119 or UL 263. If these test standards are required to suit condition, provide fire-resistance-rated glazing specified below with appropriate fire-rating to match wall rating condition.
- D. Properties:

1. Fire Rating: 60 minutes, unless otherwise indicated.
2. Nominal Thickness: 5/16 inch
3. Visible Light Transmission: Not less than 85 percent
4. Impact Safety Resistance: Passes
5. STC Rating: Not less than 38

E. Testing: Product shall comply with the following:

1. Fire-Protection Rating: Hose-stream tested complying with CBC Chapter 703, and the following:
 - a. Doors: NFPA 252, UL 10b and 10c
2. Impact Safety Resistance: ANSI Z97.1 and CPSC 16CFR1201(Cat. I and II).

2.3 GLAZING ACCESSORIES

A. Provide manufacturer's standard glazing gaskets, glazing sealants, glazing tapes, setting blocks, spacers, edge blocks, and other glazing accessories that are compatible with glazing products and each other and are approved by testing agencies that listed and labeled fire-resistant glazing products with which products are used for applications and fire-protection ratings indicated.

1. Glazing Tape: Closed cell polyvinyl chloride foam, coiled on release paper over adhesive on two sides, maximum water absorption by volume of 2 percent, designed for compression of 25 percent to effect an air and vapor seal.
2. Setting Blocks: Hardwood or calcium silicate; glass width by 4 inches by 3/16 inch thick.
3. Spacers: Neoprene or other resilient blocks of 40 to 50 Shore A durometer hardness, adhesive-backed on one face only, tested for compatibility with specified glazing compound.

2.4 MISCELLANEOUS GLAZING MATERIALS

A. Cleaners, Primers, and Sealers: Type recommended by manufacturer of glass and gaskets.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with manufacturing and installation tolerances, including those for size, squareness, and offsets at corners, and for compliance with minimum required face and edge clearances.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate fire side and protected side. Label or mark units as needed so that fire side and protected side are readily identifiable. Do not use materials that leave visible marks in the completed work.
- C. Examine framing components for dents, scratches, and other problems with framing or finish that may deter from finish product installation.

3.3 GLAZING, GENERAL

- A. Use methods approved by testing agencies that listed and labeled fire-resistant glazing products in accordance with section 088000 "Glazing" as applicable.

- B. Comply with combined written instructions of manufacturers of glass, framing, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- E. Set glass lites with proper orientation so that coatings face fire side or protected side as specified.

3.4 REPAIR AND TOUCH UP

- A. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged.

3.5 CLEANING AND PROTECTION

- A. Immediately after installation, remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
 - 1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
- C. Remove and replace glass that is damaged during construction period.
- D. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.

END OF SECTION

SECTION 090561.13 - MOISTURE VAPOR EMISSION CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes fluid-applied, resin-based, membrane-forming systems that control the moisture-vapor-emission rate of high-moisture, interior concrete to prepare it for floor covering installation when required by concrete moisture and alkalinity testing specified in other Sections.
 - 1. Use of this product is only required when testing of concrete subflooring has shown evidence that allowable moisture vapor levels have been exceeded.
- B. Related Sections that may require use of this Section:
 - 1. Section 093013 "Tiling."
 - 2. Section 096516 "Resilient Sheet Flooring."
 - 3. Section 096519 "Resilient Tile Flooring."
 - 4. Section 096723 "Resinous Flooring."
 - 5. Section 096813 "Tile Carpeting."

1.2 UNIT PRICES

- A. Work of this Section is affected by unit prices specified in Section 012200 "Unit Prices."
 - 1. Unit prices apply to authorized additions to and deletions from the Work as authorized by Change Orders.

1.3 DEFINITIONS

- A. MVE: Moisture vapor emission.
- B. MVER: Moisture vapor emission rate.

1.4 AREAS REQUIRING VAPOR CONTROL SYSTEM

- A. As indicated in specific Specification Sections, moisture testing performed for interior concrete slab areas receiving applied finishes determines where the vapor reduction system shall be installed. Compare test results with requirements of the flooring manufacturer.
- B. Water vapor reduction system is not required on interior concrete slabs without floor finishes.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product, including concrete preparation and installation instructions.

1.6 INFORMATIONAL SUBMITTALS

- A. Certifications:
 - 1. Furnish written certification that the manufacturer has verified the compatibility between the vapor retarder provided and the flooring product scheduled to be applied, including adhesives and floor leveling materials.
 - 2. Furnish written certification of systems full conformance to all requirements of ASTM F 3010. Include independent tests confirming perm rating does not exceed 0.1 grains/sq.ft./hr in Hg-1.
 - 3. Flooring Manufacturer Acceptance of Vapor Retarder Application: Furnish a signed written statement obtained from flooring manufacturer, stating that the water vapor emission levels, after application of vapor retarders, are acceptable and suitable for their flooring application.

- B. Product Test Reports: For each MVE-control system, for tests performed by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Employs factory-trained personnel who are available for consultation and Project-site inspection.
 - 1. Manufacturer shall have no less than ten (10) years history in producing the same water vapor reduction systems. The moisture vapor control system must be specifically designed for concrete moisture vapor and pH control.
 - 2. Manufacturer shall provide the Owner with a standard fifteen (15) year warranty at no additional cost. Manufacturer shall not exclude ridgelines or mole lines that develop in the finished flooring material. Applicator of water vapor reduction system shall provide standard installation warranty for workmanship.
 - 3. Manufacturer shall provide documentation and Independent Laboratory test reports confirming performance and compliance with the following:
 - a. ASTM E96-05 Standard Test Method for Water Vapor Transmission of Materials in Perms (Water Method): Net Perms shall not exceed 0.1 grains/sq. ft./hr. in Hg-1. (test must be in grains/sq. ft/hr in Hg-1)
 - b. ASTM D 1308: Insensitivity to alkaline environment up to, and including, pH 14. A 14 day test is required with no degradation of sample reported.
 - c. ASTM D 7234: Minimum results 1056 PSI average
 - d. Product shall have Independent test reports of cured products showing VOC Emission compliance with USGBC LEED Version 4, performed according to California Dept. of Public Health CDPH/EHLB Standard Method V1.2.
- B. Installer Qualifications: An authorized representative who is trained and approved by MVE-control product manufacturer experienced in surface preparation and application of the material and subject to inspection by the manufacturer.
- C. Provide the following upon request:
 - 1. Qualification Data: For Installer and manufacturer.
 - 2. Preinstallation testing reports.
 - 3. Field quality-control reports.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating directions for storage and mixing with other components.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Comply with MVE-control system manufacturer's written instructions for substrate and ambient temperatures, humidity, ventilation, and other conditions affecting system installation.
 - 1. Store system components in a temperature-controlled environment and protected from weather and at ambient temperature of not less than 65 deg F and not more than 85 deg F at least 48 hours before use.
 - 2. Maintain ambient temperature and relative humidity in installation areas within range recommended in writing by MVE-control system manufacturer, but not less than 65 deg F or more than 85 deg F and not less than 40 or more than 60 percent relative humidity, for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

3. Install MVE-control systems where concrete surface temperatures will remain a minimum of 5 deg F higher than the dew point for ambient temperature and relative humidity conditions in installation areas for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

1.10 WARRANTY

- A. **Manufacturer's Special Warranty:** Manufacturer and Installer agree to repair or replace the applied concrete vapor retarder, the new floor covering or coating, including materials and labor for applied concrete vapor retarder that fails to remain adhered to the substrate or is affected by moisture or alkalinity within the specified warranty period. Manufacturer's warranty requires manufacturer's inspection and written authorization, prior to removal of existing floor covering and applied concrete vapor retarder.
 1. **Warranty Period:** 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. **MVE-Control System Capabilities:** Capable of suppressing MVE without failure where installed on concrete that exhibits the following conditions:
 1. **MVER:** Maximum 25 lb of water/1000 sq. ft. when tested according to ASTM F 1869.
 2. **Relative Humidity:** Maximum 100 percent when tested according to ASTM F 2170 using in situ probes.
- C. **Water-Vapor Transmission:** Through MVE-control system, maximum 0.10 perm when tested according to ASTM E 96/E 96M.
- D. **Tensile Bond Strength:** For MVE-control system, greater than 200 psi with failure in the concrete according to ASTM D 7234.

2.2 MVE-CONTROL SYSTEM

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. ARDEX Americas.
 2. KOSTER American Corporation.
 3. MAPEI Corporation.
- B. **MVE-Control System:** Fully compliant with ASTM F 3010, fluid-applied, 100 percent solids epoxy-resin, membrane-forming system; formulated for application on concrete substrates to reduce MVER to level required for installation of floor coverings indicated and acceptable to manufacturers of floor covering products indicated, including adhesives.
 1. Multi-coat, water based or silicate based systems not allowed.
- C. **Substrate Primer:** Provide MVE-control system manufacturer's concrete-substrate primer if required for system indicated by substrate conditions.

2.3 ACCESSORIES

- A. Patching and Leveling Material: Moisture-, mildew-, and alkali-resistant product recommended in writing by MVE-control system manufacturer and with minimum of 3000-psi compressive strength after 28 days when tested according to ASTM C 109/C 109M.
- B. Crack-Filling Material: Resin-based material recommended in writing by MVE-control system manufacturer for sealing concrete substrate crack repair.
- C. Cementitious Underlayment: If required to maintain manufacturer's warranty, provide MVE-control system manufacturer's hydraulic cement-based underlayment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of the Work. Review flooring manufacturer's requirements and confirm that MVE-control products will meet or exceed the flooring manufacturer's requirements for moisture and alkalinity.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Installation of system indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Preinstallation Testing: As required by individual Specification flooring product Sections.
- B. In addition to the above tests required by other Sections, provide the following tests for application of the MVE-control product:
 - 1. Tensile-Bond-Strength Testing: For typical locations indicated to receive installation of MVE-control system, install minimum 100-sq. ft. area of MVE-control system to prepared concrete substrate and test according to ASTM D 7234.
 - a. Proceed with installation only where tensile bond strength is greater than 200 psi with failure in the concrete.
- C. Concrete Substrates: Prepare and clean substrates according to MVE-control system manufacturer's written instructions to ensure adhesion of system to concrete.
 - 1. Remove coatings and other substances that are incompatible with MVE-control system and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by MVE-control system manufacturer. Do not use solvents.
 - 2. Provide concrete surface profile complying with ICRI 310.2R CSP 3 by shot blasting using apparatus that abrades the concrete surface with shot, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - 3. After shot blasting, repair damaged and deteriorated concrete according to MVE-control system manufacturer's written instructions.
 - 4. Protect substrate voids and joints to prevent resins from flowing into or leaking through them.
 - 5. Fill surface depressions and irregularities with patching and leveling material.
 - 6. Fill surface cracks, grooves, control joints, and other nonmoving joints with crack-filling material.
 - 7. Allow concrete to dry, undisturbed, for period recommended in writing by MVE-control system manufacturer after surface preparation, but not less than 24 hours.
 - 8. Before installing MVE-control systems, broom sweep and vacuum prepared concrete.
- D. Protect walls, floor openings, electrical openings, door frames, and other obstructions during installation.

3.3 INSTALLATION

- A. General: Install MVE-control system according to ASTM F 3010 and manufacturer's written instructions to produce a uniform, monolithic surface free of surface deficiencies such as pin holes, fish eyes, and voids.
 - 1. Install primers as required to comply with manufacturer's written instructions.
- B. Do not apply MVE-control system across substrate expansion, isolation, and other moving joints.
- C. Apply system, including component coats if any, in thickness recommended in writing by MVE-control system manufacturer for MVER indicated by preinstallation testing.
- D. Cure MVE-control system components according to manufacturer's written instructions. Prevent contamination or other damage during installation and curing processes.
- E. After curing, examine MVE-control system for surface deficiencies. Repair surface deficiencies according to manufacturer's written instructions.
- F. Install cementitious underlayment over cured membrane if required to maintain manufacturer's warranty and in thickness required to maintain the warranty.

3.4 FIELD QUALITY CONTROL

- A. Installation Inspections: Engage MVE-control system manufacturer's technical representative to inspect substrate preparation and installation of system components to ensure compliance with manufacturer's written instructions and to ensure that a complete MVE-control system is installed without deficiencies.
 - 1. Verify that surface preparation meets requirements.
 - 2. Verify that component coats and complete MVE-control-system film thicknesses comply with manufacturer's written instructions.
 - 3. Verify that MVE-control-system components and installation areas that evidence deficiencies are repaired according to manufacturer's written instructions.
- B. MVE-control system will be considered defective if it does not pass inspections.

3.5 CLEANING

- A. Clean application tools and equipment, and clean surrounding areas that may have been affected by the MVE-control system installation.
- B. Remove debris resulting from MVE-control system installation from Project site.

3.6 PROTECTION

- A. Protect MVE-control system from damage, wear, dirt, dust, and other contaminants before floor covering installation. Use protective methods and materials, including temporary coverings, recommended in writing by MVE-control system manufacturer.
- B. Do not allow subsequent preinstallation examination and testing for floor covering installation to damage, puncture, or otherwise compromise the MVE-control system membrane.

END OF SECTION

SECTION 092116.23 - GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes gypsum board shaft wall assemblies.

1.2 ACTION SUBMITTALS

- A. Product Data: For each component of gypsum board shaft wall assembly.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and support them on risers on a flat platform to prevent sagging.

1.4 FIELD CONDITIONS

- A. Environmental Limitations: Comply with gypsum-shaftliner-board manufacturer's written instructions.
- B. Do not install finish panels until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, or mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E 90 and classified according to ASTM E 413 by a testing and inspecting agency.

2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES

- A. Fire-Resistance Rating: As indicated.
- B. STC Rating: As indicated on Drawings.
- C. Gypsum Shaftliner Board:
 - 1. Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with paper faces, 1 inch thick, with double beveled long edges.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) CertainTeed Corporation; ProRoc Shaftliner.

- 2) Georgia-Pacific Building Products; ToughRock Fireguard Shaftliner.
 - 3) National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner.
 - 4) United States Gypsum Company; Sheetrock Brand Gypsum Liner Panel.
 2. Moisture- and Mold-Resistant, Fiberglass-Mat Faced: ASTM C 1658/C 1658M; manufacturer's proprietary fire-resistive liner panels with ASTM D 3273 mold-resistance score of 10 as rated according to ASTM D 3274, 1 inch thick, and with double beveled long edges.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) CertainTeed Corporation; M2Tech shaftliner Type X
 - 2) Georgia-Pacific Building Products; Dens-Glass Shaftliner.
 - 3) National Gypsum Company; Gold Bond Brand eXP Shaftliner
 - 4) United States Gypsum Company; Sheetrock Glass-Mat Liner Panel.
 3. Applications: For shaft walls and chases expected to be exposed for an extended period of time, use glass mat faced gypsum liner panels. Refer to panel manufacturer's literature for exposure limits. Replace panels exposed beyond the recommended exposure limits.
 - D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C 645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.
 1. Protective Coating: ASTM A 653/A 653M, G40, hot-dip galvanized unless otherwise indicated.
 - E. Studs: Manufacturer's standard C, H, or I profile for repetitive, corner, and end members as follows:
 1. Manufacturer: Same manufacturer providing non-structural metal framing specified in Section 092216.
 - a. Depth: As indicated.
 - b. Minimum Base-Metal Thickness: As indicated.
 - F. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches long and matching studs in depth.
 1. Minimum Base-Metal Thickness: Matching steel studs.
 - G. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BlazeFrame Industries; Bare Slotted Track (BST/BST 2).
 - b. CEMCO; California Expanded Metal Products Co.; CST Slotted Deflection Track or SLP-TRK Slotted Deflection Track.
 - c. ClarkDietrich Building Systems; SLP-TRK Slotted Deflection Track.
 - d. Comprable product by selected stud manufacturer.
 - H. Elevator-Hoistway-Entrance Struts: Manufacturer's standard J-profile jamb strut with long-leg length of 3 inches, matching studs in depth, and not less than 0.033 inch thick.
 - I. Finish Panels: Gypsum board as specified in Section 092900 "Gypsum Board."
- 2.3 AUXILIARY MATERIALS**
- A. General: Provide auxiliary materials that comply with shaft wall manufacturer's written instructions.
 - B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Section 092900 "Gypsum Board" that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.
 - C. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.

- D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
 - 1. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488/E 488M conducted by a qualified testing agency.
 - 2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.
- E. Reinforcing: Galvanized-steel reinforcing strips with 0.033-inch minimum thickness of base metal (uncoated).
- F. Acoustical Sealant: Section 079219 "Acoustical Joint Sealants."
- G. Sound Attenuation Blankets: As specified in Section 98100 "Acoustical Insulation"
- H. Gypsum Board Cants:
 - 1. Gypsum Board Panels: As specified in Section 092900 "Gypsum Board," Type X, 1/2- or 5/8-inch panels.
 - 2. Adhesive: Laminating adhesive as specified in Section 092900 "Gypsum Board."
 - 3. Non-Load-Bearing Steel Framing: As specified in Section 092216 "Non-Structural Metal Framing."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.
- B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.
- C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.
 - 1. Elevator Hoistway: At elevator hoistway-entrance door frames, provide jamb struts on each side of door frame.
 - 2. Reinforcing: Provide where items attach directly to shaft wall assembly as indicated on Drawings; accurately position and secure behind at least one layer of face panel.

- D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.
- E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.
- F. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
- G. Control Joints: Install control joints according to ASTM C 840, in specific locations approved by Architect and as follows, while maintaining fire-resistance rating of gypsum board shaft wall assemblies.
 - 1. Install at changes in backup material.
 - 2. Framed Openings: Verify all locations with Architect prior to proceeding.
 - a. Doors: Install at jambs unless indicated or directed otherwise.
 - b. Glazed Openings: Install above and below jambs unless indicated or directed otherwise.
 - 3. Install at other locations indicated on Drawings.
- H. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.
- I. Gypsum Board Cants: At projections into shaft exceeding 4 inches as occurs, install gypsum board cants covering tops of projections.
 - 1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches o.c. with screws fastened to shaft wall framing.
 - 2. Where non-load-bearing steel framing is required to support gypsum board cants, install framing at 24 inches o.c. and extend studs from the projection to shaft wall framing.
- J. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.3 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 092216 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Non-load-bearing steel framing systems for interior and exterior partitions.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product, include manufacturers height limitation tables.

1.3 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Product Certificates: For each type of code-compliance certification for studs and tracks.
 - 2. Evaluation Reports: For firestop tracks, post-installed anchors, power-actuated fasteners, and proprietary gypsum board ceiling suspension systems, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
- C. Horizontal Deflection: For standard gypsum board wall assemblies, limit deflection to L/240 of the wall height based on horizontal loading of 5 lbf/sq. ft.. For walls supporting tile, casework, resin panels, or similar type cladding or equipment, limit deflection to L/360 of the wall height based on horizontal loading of 5 lbf/sq. ft., unless otherwise indicated by more stringent requirements on the Drawings.

2.2 FRAMING SYSTEMS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
 - 1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated.
 - 2. Protective Coating: ASTM A 653/A 653M, G40 , hot-dip galvanized unless otherwise indicated.
- C. Studs and Tracks: ASTM C 645.
 - 1. Steel Studs and Tracks:
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- 1) CEMCO; California Expanded Metal Products Co.
 - 2) ClarkDietrich Building Systems.
 - 3) Olmar Supply
 - 4) Phillips Manufacturing Co.
 - 5) Steel Network, Inc. (The).
- b. Minimum Base-Metal Thickness: As indicated on Drawings or as required by performance requirements for horizontal deflection.
 - c. Depth: As indicated on Drawings.
- D. Slip-Type Head Joints: Where indicated, provide one of the following:
1. Single Long-Leg Track System: ASTM C 645 top track with 2-inch- deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.
 2. Double-Track System: ASTM C 645 top outer tracks, inside track with 2-inch- deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.
 3. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) BlazeFrame Industries; Bare Slotted Track (BST/BST 2).
 - 2) CEMCO; California Expanded Metal Products Co.; CST Slotted Deflection Track or SLP-TRK Slotted Deflection Track.
 - 3) ClarkDietrich Building Systems; SLP-TRK Slotted Deflection Track.
 - 4) Equal product by selected manufacturer.
- E. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. BlazeFrame Industries; Intumescent Framing, Fire Stop System.
 - b. CEMCO; California Expanded Metal Products Co.; FAS Track.
 - c. ClarkDietrich Building Systems; BlazeFrame.
 - d. Fire Trak Corp; Fire Trak System attached to studs with Fire Trak Posi Klip.
 - e. Equal product by selected manufacturer.
- F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
1. Minimum Base-Metal Thickness: As indicated on Drawings.
- G. Cold-Rolled Channel Bridging: Steel, 0.0538-inch minimum base-metal thickness, with minimum 1/2-inch-wide flanges.
1. Depth: As indicated on Drawings.
 2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch- thick, galvanized steel.
- H. Hat-Shaped, Rigid Furring Channels: ASTM C 645.
1. Minimum Base-Metal Thickness: As indicated on Drawings.
 2. Depth: As indicated on Drawings.
- I. Cold-Rolled Furring Channels: 0.053-inch uncoated-steel thickness, with minimum 1/2-inch- wide flanges.
1. Depth: As indicated on Drawings.

2. Furring Brackets: Adjustable, corrugated-edge-type steel sheet with minimum uncoated-steel thickness of 0.0329 inch.
 3. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- diameter wire, or double strand of 0.048-inch- diameter wire.
- J. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, minimum uncoated-metal thickness of 0.0179 inch, and depth required to fit insulation thickness indicated.

2.3 EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
1. Minimum Base-Metal Thickness: As indicated or required by performance requirements, but not less than 18 gauge.
 2. Flange Width: 1-3/8 inches (35 mm).
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
1. Minimum Base-Metal Thickness: As indicated or required by performance requirements but not less than 18 gauge.
 2. Flange Width: 1-1/2 inches (32 mm).
- C. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
1. Minimum Base-Metal Thickness: As indicated or required by performance requirements, but not less than 18 gauge.
 2. Flange Width: 1 inch (25 mm) plus the design gap for one-story structures and 1 inch (25 mm) plus twice the design gap for other applications.
- D. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.
1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
 - a. Minimum Base-Metal Thickness: As indicated or required by performance requirements, but not less than 18 gauge.
 - b. Flange Width: 1 inch (25 mm) plus the design gap for one-story structures and 1 inch (25 mm) plus twice the design gap for other applications.
 2. Inner Track: Of web depth indicated, and as follows:
 - a. Minimum Base-Metal Thickness: As indicated or required by performance requirements..
 - b. Flange Width: Dimension equal to sum of outer deflection track flange width plus 1 inch (25 mm).

2.4 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Acoustical Joint Sealant: Refer to Section 079219 'Acoustical Joint Sealants.'

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Sheathing and Gypsum Board Application: Per ASTM C 754 and ASTM C 840.
- B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.
- C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
- D. Install bracing at terminations in assemblies.
- E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.3 INSTALLING FRAMED ASSEMBLIES

- A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
 - 1. Single-Layer Application: As required by horizontal deflection performance requirements unless otherwise indicated.
 - 2. Multilayer Application: As required by horizontal deflection performance requirements unless otherwise indicated.
- B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- C. Install studs so flanges within framing system point in same direction.
- D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
 - 1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
 - 2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
 - a. Install two studs at each jamb unless otherwise indicated.
 - b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
 - c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
 - 3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.

4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
 5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
- E. Direct Furring:
1. Attach to concrete with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
- F. Z-Shaped Furring Members:
1. Erect insulation, specified in Section 072100 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced 24 inches o.c.
 2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, or powder-driven fasteners spaced 24 inches o.c.
 3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.
- G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.4 INSTALLATION OF EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
- B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:
 1. Stud Spacing: As indicated on Drawings, but not more than 16 inches on center
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
 1. Install single deep-leg deflection tracks and anchor to building structure.
 2. Install double deep-leg deflection tracks and anchor outer track to building structure.
- E. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 INSTALLING AUXILIARY MATERIALS

- A. Install auxiliary products and partition closures in accordance with manufacturer's instructions.

END OF SECTION

SECTION 092400 - CEMENT PLASTERING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following plaster (stucco) materials for repairing and patching of existing plaster (stucco) surfaces and installation of any new plaster required:
 - 1. Metal lath.
 - 2. Base-coat cement plaster.
 - 3. Cement plaster finish coats.
 - 4. Accessories.

- B. Related Requirements:
 - 1. Section 072726 "Fluid-Applied Membrane Air Barriers" for weather barrier used on sheathing behind plaster.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct at Project Site at least 2 weeks prior to commencement of Work in this Section.
 - 1. Attendees: Include plaster installer, Architect, and weather barrier installer. Discuss the following:
 - a. Architect's design intent for finish and color.
 - b. Special aesthetic detail applications.
 - c. Flashing.
 - d. Review ASTM reference standards applicable to the Work of this Section, including the following:
 - 1) ASTM C 9262.
 - 2) ASTM C 1063

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- B. Shop Drawings: Show locations and installation of control and expansion joints, including plans, elevations, sections, details of components, and attachments to other work.

- C. Samples for Verification: For each type of finish coat and for each color and texture specified using materials and methods indicated; 12 by 12 inches, and prepared on rigid backing with lath. Match existing, unless otherwise indicated.

1.4 INFORMATIONAL SUBMITTALS

- A. Certifications:
 - 1. Certification on company letterhead indicating that the ASTM standards have been reviewed in their entirety with the Applicator and that the applicator agrees to comply with the applicable requirements therein during the installation of the cement plastering.
 - 2. Submit letter from topcoat finish manufacturer confirming that Applicator is a certified applicator in good standing with the manufacturer and qualified to perform the specified work and able to receive the required warranties.

1.5 QUALITY ASSURANCE

- A. Installer: Company specializing in performing the work of this section with minimum (5) years' documented experience on similar projects with a record of successful in-service performance.
 - 1. Applicator shall be an approved applicator by the topcoat finish manufacturer for the Work of this Section and the specified warranty.
- B. Provide the following upon request:
 - 1. Qualification statements: For installer.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to the Project site in manufacturer's original, unopened packages and containers bearing the manufacturer's name and label, and the following information:
 - 1. Product name or title of material.
 - 2. Manufacturer's stock number and date of manufacture.
 - 3. Contents by volume, for pigment and vehicle constituents.
 - 4. Thinning instructions (if permitted).
 - 5. Application instructions.
 - 6. Color name and number.
 - 7. Handling instructions and precautions.
 - 8. VOC content.
 - 9. Safety warnings.
- B. Store materials inside under cover, and keep them dry and protected against damage from weather, moisture, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.
- C. Store materials not in use in tightly covered containers in a well-ventilated area in an ambient temperature range of 50 deg F to 85 degrees
- D. Store leveler off of the ground in a dry area.
- E. Maintain containers in a clean condition, free of foreign materials and residue.
- F. Protect materials from freezing.
- G. Keep storage area neat and orderly.
- H. Remove oily rags and waste daily.
- I. Take necessary measures to ensure workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying materials.

1.7 FIELD CONDITIONS

- A. Comply with ASTM C926 requirements.
- B. Exterior Plasterwork:
 - 1. Apply and cure plaster to prevent plaster drying out during curing period. Use procedures required by climatic conditions, including moist curing, providing coverings, and providing barriers to deflect sunlight and wind.
 - 2. Apply plaster when ambient temperature is greater than 40 deg F and allow to dry.
 - 3. Protect plaster coats from freezing for not less than 48 hours after set of plaster coat has occurred.

1.8 WARRANTY

- A. Installer Warranty: Installer warranty in which Installer agrees to repair or replace cement plaster assemblies or portions of assemblies that fail in materials or workmanship within the specified warranty period. Repair or replacement shall include entire assembly, including, but not limited to, accessories and flashings. Failures include, but are not limited to, delamination, non-structural cracking beyond tolerances indicated, shrinkage due to improper hydration and curing, improper placement of control joints, or water penetration through the finish.
1. Warranty Period: Five years from date of Substantial Completion.
 2. Structural causes include: transferred stresses caused by sonic resonance, seismic vibration, deflection of support members beyond specified limits, thermal shock, wind loads, settlement and/or subsidence of the building structure.

PART 2 - PRODUCTS

2.1 METAL LATH

- A. Expanded-Metal Lath: ASTM C847, cold-rolled carbon-steel sheet with ASTM A653/A653M, G60, hot-dip galvanized-zinc coating.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Alabama Metal Industries Company; a Gibraltar Industries company.
 - b. CEMCO; California Expanded Metal Products Co.
 - c. ClarkDietrich.
 2. Diamond-Mesh Lath: Flat and Self-furring, 3.4 lb/sq. yd..
- B. Wire-Fabric Lath:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ClarkDietrich Building Systems.
 - b. K-Lath; a Tree Island Steel Ltd. company.
 - c. Structa Wire Corp.
 2. Welded-Wire Lath: ASTM C933; self-furring, 2.5 lb/sq. yd. (0.8 kg/sq. m), double wire, ICC-ES ESR 2017, or equivalent.
 - a. Basis-of-Design Product: ClarkDietrich Building Systems; Twin Trac 2.5, or equal.
- C. Paper Backing: FS UU-B-790a, Type I, Grade D, Style 2 vapor-permeable paper.
1. Provide paper-backed lath over one layer of Grade D building paper when installed over rigid board insulation.
 - a. Contractor's Option: In lieu of paper-backed lath, install lath over 2-layers of Grade D building paper:

2.2 BASE-COAT CEMENT PLASTER

- A. General: Comply with ASTM C926 for applications indicated.
1. Fiber Content: Add fiber to base-coat mixes after ingredients have mixed at least two minutes. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 1 lb of fiber/cu. yd. of cementitious materials.
- B. Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork as follows:

1. Portland Cement Mixes:
 - a. Scratch Coat: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Brown Coat: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

2.3 CEMENT PLASTER FINISH COATS

- A. Contractor's Option: Use either job-mixed finish coat or factory-blended ready mix finish coat to produce color and texture indicated.
- B. Job-Mixed Finish-Coat Mixes:
 1. Portland Cement Mix: For cementitious materials, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 1-1/2 to 3 parts aggregate per part of cementitious material. Add colorant according to manufacturer's instructions.
- C. Ready-Mixed Finish-Coat Plaster: Mill-mixed portland cement, aggregates, coloring agents, and proprietary ingredients.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. California Stucco Products Corp.
 - b. LaHabra Stucco Solutions; Parex USA.
 - c. Omega Products International, Inc.
 - d. Parex USA
 - e. Sto
- D. Color and Texture: As indicated on Drawings

2.4 ACCESSORIES

- A. General: Comply with ASTM C1063, and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.
 1. Provide continuous backing for securement of cement plaster accessories.
 2. Provide custom radiused accessories where substrate is radiused.
 3. Refer to Drawings for accessory shape locations. If discrepancies exist, notify Architect in advance of ordering materials.
- B. Metal Accessories:
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Alabama Metal Industries Company; a Gibraltar Industries company.
 - b. Brand X Metals, Inc.
 - c. CEMCO; California Expanded Metal Products Co.
 - d. ClarkDietrich.
 2. Foundation Weep Screed: Fabricated from hot-dip galvanized-steel sheet, ASTM A653/A653M, G60 zinc coating.
 3. Soffit Drip Edge: Fabricated with 4 inch vertical flange without weep holes from hot-dip galvanized-steel sheet, ASTM A653/A653M, G60 (Z180) zinc coating.
 4. Cornerbeads: Fabricated from zinc zinc-coated (galvanized) steel or anodized aluminum.
 - a. Smallnose cornerbead with expanded flanges; use unless otherwise indicated.

5. External- (Outside-) Corner Reinforcement: Fabricated from metal lath with ASTM A653/A653M, G60 (Z180), hot-dip galvanized-zinc coating, where cornerbeads are not used.
6. Casing Beads: Fabricated from zinc zinc-coated (galvanized) steel or anodized aluminum; square-edged style; with expanded flanges.
7. Control Joints: Fabricated from zinc or zinc-coated (galvanized) steel; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint. Usae at floor lines and where otherwise indicated.
 - a. Vertical: One-piece double "J" type; with perforated flanges and removable protective tape on plaster face of control joint.
 - b. Horizontal: One-piece double "V" type; with perforated flanges and removable protective tape on plaster face of control joint.
8. Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges. Prime and paint reveals in color to be selected by Architect in accordance with Division 09 "Exterior Painting."
9. Two-Piece Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; formed to produce slip-joint and square-edged reveal that is adjustable from 1/4 to 5/8 inch wide; with perforated flanges.
- 10.

2.5 PLASTER MATERIALS

- A. Portland Cement: ASTM C150/C150M, Type I or Type II.
 1. Color for Job-Mixed Finish Coats: In color required to produce specified color.
- B. Lime: ASTM C206, Type S; or ASTM C207, Type S.
- C. Sand Aggregate: ASTM C897.
 1. Color for Job-Mixed Finish Coats: In color required to produce specified color.
- D. Colorants for Job-Mixed Finish Coats: Colorfast mineral pigments that produce finish plaster color as indicated.

2.6 MISCELLANEOUS MATERIALS

- A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.
- B. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2 inch long, free of contaminants, manufactured for use in cement plaster.
- C. Bonding Compound: ASTM C932.
- D. Fasteners for Attaching Metal Lath to Substrates: ASTM C1063.
- E. Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch diameter unless otherwise indicated.
- F. Acrylic Polymer Admixture: 100 percent acrylic polymer admixture for brown coat.
- G. Self-Adhering Stainless Steel Flexible Flashing:
 1. Subject to compliance with requirements, provide the following:
 - a. York Manufacturing Inc.; York 304 SA.
 2. Characteristics:

- a. Type: Stainless steel with one stainless steel face (facing outwards) with a butyl block co-polymer adhesive (inward facing).
- b. Stainless Steel: Type 304, ASTM A240. Domestically sourced per DF ARS 252.225-7008 and/or DF ARS 252.225-7009.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Surfaces to receive finish system must be thoroughly dry before materials are applied.
- C. Notify the Architect in writing of anticipated problems using products specified over substrates.
- D. Start of application within a particular area will be construed as the acceptance of surface conditions.
- E. Deflection Tolerance: Walls to received plaster shall have a deflection tolerance of no greater than L/360.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Protect adjacent work from soiling, spattering, moisture deterioration, and other harmful effects caused by plastering.
- B. Remove hardware and hardware accessories, plates, machined surfaces, light fixtures, and similar items already installed that are not to be coated.
 1. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and product application.
 2. After completing operations in each area, reinstall items removed, using workers skilled in trades involved.
- C. Cleaning: Before applying materials or other surface treatments, clean substrates of substances that could impair bond of coating systems.
 1. Remove oil and grease before cleaning.
 2. Schedule cleaning and materials application so dust and other contaminants will not fall on wet, newly applied surfaces.

3.3 MIXING

- A. Mix materials in strict conformance with the manufacturer's written requirements and recommendations. Mix materials for a minimum of 4 minutes. If manufacturer's published mixing times conflict with this requirement, bring the discrepancy to the attention of the waterproofing consultant prior to mixing and application.
- B. Mix using measuring devices of known volume with successive batches proportioned alike.
- C. Add polymer admixture to brown coat according to admixture manufacturer's recommended mix rates.

3.4 INSTALLATION, GENERAL

- A. Install manufactured components in accordance with manufacturer's written instructions and recommendations
- B. Continuously reinforce internal angles.
- C. Frame both sides of expansion joints independently unless otherwise indicated, do not bridge joints with furring and lathing or accessories
- D. Fixture Support Framing: Install supplementary framing, blocking and bracing where work is indicated to support fixtures, equipment, services and similar work requiring attachment and support
- E. Coordinate installation of anchors, blocking, electrical and mechanical work which is to be placed in or behind framing; allow such items to be installed after framing is complete.
- F. Install self-adhering flashing at inside corners, outside corners, behind stucco accessories, at penetrations, and to strip in drip/weep screeds unless otherwise shown or noted.

3.5 INSTALLATION OF METAL LATH

- A. Metal Lath: Install according to ASTM C 1063.
 - 1. Partition Framing and Furring over Rigid Board Insulation: Diamond-mesh attached directly to metal studs or thermal spacer cladding attachment brackets in locations indicated.
 - a. Diamond-Mesh: Install paper-backed self-furring-diamond-mesh lath over one-layer Grade D building paper. Attach lath to metal z-furring.
 - 1) In lieu of paper-backed lath, install metal lath over 2-layers of Grade D building paper.
- B. Install metal furring and lathing so that the finished plaster surfaces are true to line, level, plumb, square, or curved as required to receive the specified plaster thickness.
 - 1. Tolerance: 1/4 inch in 10 ft.
- C. Place 6" wide x 12" long strips of metal lath diagonally at corners of openings; secure rigidly in place
- D. Place 6" wide strips of metal lath at junctions of dissimilar materials; place parallel with dissimilar materials; secure rigidly in place.
- E. Pattern: 16 inches horizontally and 6 inches vertically (similar to a framed wall).
- F. Fasteners shall project through metal studs not less than 3/8 inch or three full threads, whichever is greater, unless more stringent requirements are indicated in ASTM C 1063.
- G. Fasteners shall engage not less than three strands of lath.
- H. Apply sealant over fasteners at open framing.
- I. Isolation: Where lathing and metal support system abuts building structure horizontally and where partition or wall abuts overhead structure, sufficiently isolate from structural movement to prevent transfer of loading from building structure.

3.6 INSTALLATION OF ACCESSORIES

- A. Install according to ASTM C1063 and at locations indicated on Drawings.

- B. Reinforcement for External (Outside) Corners:
 - 1. Install cornerbead at interior locations.
 - 2. Install lath-type, external-corner reinforcement at exterior locations.
- C. Control Joints: Locate as approved by Architect for visual effect and as follows:
 - 1. As required to delineate plasterwork into areas (panels) of the following maximum sizes:
 - a. Vertical Surfaces: 144 sq. ft..
 - b. Horizontal and Other Nonvertical Surfaces: 100 sq. ft..
 - 2. At distances between control joints of not greater than 18 feet o.c.
 - 3. As required to delineate plasterwork into areas (panels) with length-to-width ratios of not greater than 2-1/2:1.
 - 4. Where control joints occur in surface of construction directly behind plaster.
 - 5. Where plasterwork areas change dimensions, to delineate rectangular-shaped areas (panels) and to relieve the stress that occurs at the corner formed by the dimension change.
- D. Transition Membranes and Opening Flashing: Install in proper sequence to maintain drainage by lapping from above. Where feathering into existing weather barriers or building paper, lap weather barrier over flashing at head of opening, and lap window flashing over existing weather barriers at sill.
 - 1. Install self-adhering stainless steel flashing in openings according to manufacturer's instructions and recommended configurations.

3.7 CUTTING AND PATCHING EXISTING

- A. Carefully cut existing plaster to allow the installation of work.
 - 1. Score the existing surface with a diamond blade and carefully chisel existing cement plaster away from existing metal lath.
 - 2. Grind the existing finish coat 4 inches beyond removed cement plaster.
 - 3. Under-cut existing plaster edge to create a dovetail connection with the repair plaster.
 - 4. Protect existing metal lath and paper backing to the greatest extent possible.
 - 5. Protect keys of surround plaster.
- B. Patch and repair plaster as necessary to accommodate the other work and to match existing adjacent finishes to the greatest extent possible.
 - 1. Apply bonding agent at joint between existing stucco and repair.

3.8 APPLICATION OF BASE-COAT CEMENT PLASTER

- A. General: Comply with ASTM C926.
 - 1. Do not deviate more than plus or minus 1/4 inch in 10 feet from a true plane in finished plaster surfaces when measured by a 10-foot straightedge placed on surface.
 - 2. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
 - 3. Provide plaster surfaces that are ready to receive field-applied finishes indicated.
- B. Walls; Base-Coat Mixes for Use over Metal Lath: For scratch and brown coats, for three-coat plasterwork with 7/8-inch total thickness, as follows:
 - 1. Portland cement mixes.
- C. Ceilings; Base-Coat Mixes for Use over Metal Lath: For scratch and brown coats, for three-coat plasterwork with 3/4-inch total thickness, as follows:

1. Portland cement mixes.

D. Installation of Base Coats:

1. Scratch Coat: apply stucco with sufficient pressure to key into and embed the metal lath. Apply sufficient material, 3/8 or 1/2-inch, to cover the metal lath and to permit scoring the surface. Score the stucco upon completion of each panel in preparation for a second coat. Score horizontally.
2. Brown Coat: as soon as the first coat is firm enough to receive the second coat without damage, apply the second coat. Alternatively, moist cure the first coat up to 48 hours and dampen the scratched surface with water immediately before applying the second coat. Apply the second coat with sufficient pressure to ensure intimate contact with the first coat and as needed to bring the stucco to a uniform thickness that matches the grounds of the accessories. Use a rod or straight edge to bring the surface to a true, even plane. Fill depressions in plane with stucco. Final thickness of stucco shall be uniform throughout the wall area and shall be either 3/4-inch or 7/8-inch as required by design, and shall not exceed 7/8-inch.

- E. After the stucco has become slightly firm float the surface lightly with a darby or wood float to densify the surface and to provide a smooth, even surface. The proper time to float is when the wood float no longer sticks to the surface of the stucco.

- F. Moist cure after the stucco has set by lightly fogging for at least 48 hours. Fog as frequently as required during the 48-hour period to prevent loss of moisture from the stucco. Avoid eroding the stucco surface with excess moisture. If relative humidity exceeds 75% the frequency of moist curing can be diminished.

- G. Allow base coat(s) to dry prior to applying primer if primer is required for application of finish coat.

3.9 APPLICATION OF PLASTER FINISH COATS

- A. Plaster Finish Coats: Apply to provide finish in texture indicated. Confirm color and texture using Sample submittals prior to installation on building.

1. Texture:
 - a. New Construction: As indicated on Drawings.
 - b. Existing Construction: As indicated on Drawings to match existing, unless otherwise indicated.

- B. Concealed Exterior Plasterwork: Where plaster application is used as a base for adhered finishes, omit finish coat.

3.10 FIELD QUALITY CONTROL

- A. The District reserves the right to invoke the following test procedure at any time and as often as the District deems necessary during the period when coating operations are being conducted:

1. The District may engage the services of a qualified independent testing and inspecting agency to sample materials used. Samples of material delivered to the Project will be taken, identified, sealed, and certified in presence of the Contractor.
2. The testing and inspecting agency will perform appropriate tests, as required by the District.
3. If results show materials do not comply with requirements, the Contractor may be directed to stop work, remove noncomplying materials, pay for testing, recoat surfaces coated with rejected materials, or remove rejected materials from previously coated surfaces if, on recoating with specified materials, the two materials are not compatible.

- B. pH Testing: Between each coat of plaster and prior to application of paint finish.

1. Testing performed by Contractor; observed by District's QA/QC representative.
 - a. pH equal to or less than 13 is acceptable.

3.11 REPAIR

- A. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.
- B. Where indicated to repair or patch existing plaster, match color and texture of existing.
- C. Crack Tolerance: Cracks that appear within the first 30 days after installation and are larger than 1/16 inch (the thickness of a penny) shall be filled or repaired with a slurry of the same color coat material. Cracks that are patched and re-appear could indicate a structural or substrate movement problem and should be evaluated for cause. Patch cracks more than 1/16 inch thick if visible from more than 10 feet away or if a source of leaking. Fog coat or paint the entire panel if hairline cracks less than 1/16 inch thick are visible from more than 10 feet away.
 - 1. Refer to Stucco Manufacturers Association (SMA) "Stucco Crack Policy" and the Wall & Ceiling Conference (WCC) Technical Bulletin 6.002 for additional information.

3.12 CLEANING

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from the Project site.
- B. After completing coating work, clean glass and spattered surfaces. Remove spattered coatings by washing, scraping, or other methods, being careful not to scratch or damage adjacent finished surfaces.
- C. Remove temporary protection and enclosure of other work after plastering is complete.
- D. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered.
- E. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.

3.13 PROTECTION

- A. Protect work of other trades from damage whether being coated or not. Correct damage by cleaning, repairing, replacing, and recoating as approved by the Architect. Leave in an undamaged condition.
- B. Provide "Wet Paint" signs to protect newly applied materials.
- C. Remove temporary protective wrappings provided by others to protect their work after completing coating operations.
 - 1. After construction activities of other trades are complete, touch up and restore damaged or defaced surfaces.
- D. Provide protection of installed materials from water infiltration into or behind them.
- E. Provide protection of installed cement plaster from dust, dirt, precipitation, and freezing.
- F. Provide protection of installed primer and finish from dust, dirt, precipitation, freezing and continuous high humidity until fully dry.
- G. Protect and clean landscaping free of cement plaster debris.

END OF SECTION 092400

SECTION 092900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior gypsum board.
 - 2. Tile backing panels.
 - 3. Joint compounds.
- B. Related Requirements:
 - 1. Section 092216 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For the following products:
 - 1. Trim Accessories: Full-size Sample in 12-inch- (300-mm-) long length for each trim accessory indicated.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.4 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.
- B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, and mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

2.2 GYPSUM BOARD, GENERAL

- A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.3 INTERIOR GYPSUM BOARD

- A. Gypsum Board, Type X: ASTM C 1396/C 1396M.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. CertainTeed Corporation.
 - b. Georgia-Pacific Building Products.
 - c. National Gypsum Company.
 - d. United States Gypsum Company.
 2. Thickness: 5/8 inch (15.9 mm).
- B. Flexible Gypsum Board: ASTM C1396/C1396M. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Certainteed; SAINT-GOBAIN.
 - b. Georgia-Pacific Gypsum LLC.
 - c. National Gypsum Company.
 - d. PABCO Gypsum.
 - e. USG Corporation.
 2. Thickness: 1/4 inch (6.4 mm).
 3. Long Edges: Tapered.
- C. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Certainteed; SAINT-GOBAIN.
 - b. Georgia-Pacific Gypsum LLC.
 - c. National Gypsum Company.
 - d. PABCO Gypsum.
 - e. USG Corporation.
 2. Core: 5/8 inch (15.9 mm), Type X.
 3. Long Edges: Tapered.
 4. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.4 SPECIALTY GYPSUM BOARD

- A. Glass-Mat Interior Gypsum Board: ASTM C1658/C1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Georgia-Pacific Gypsum LLC.
 - b. National Gypsum Company.
 - c. PABCO Gypsum.
 - d. USG Corporation.
 2. Core: 5/8 inch (15.9 mm), Type X.

3. Long Edges: Tapered.
4. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.5 BACKING PANELS

- A. Glass-Mat, Water-Resistant Backing Board: ASTM C1178/C1178M, with manufacturer's standard edges.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Certainteed; SAINT-GOBAIN.
 - b. Georgia-Pacific Gypsum LLC.
 - c. National Gypsum Company.
 - d. USG Corporation.
 2. Core: 5/8 inch (15.9 mm), Type X.
 3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
- B. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Certainteed; SAINT-GOBAIN.
 - b. National Gypsum Company.
 - c. USG Corporation.
 2. Thickness: 5/8 inch (15.9 mm).
 3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.6 TRIM ACCESSORIES

- A. Interior Trim: ASTM C 1047.
1. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet Galvanized or aluminum-coated steel sheet or rolled zinc Plastic Paper-faced galvanized-steel sheet.
 2. Shapes:
 - a. Cornerbead.
 - b. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - c. L-Bead: L-shaped; exposed long flange receives joint compound.
 - d. U-Bead: J-shaped; exposed short flange does not receive joint compound.
 - e. Expansion (control) joint.
- B. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and drywall trim channels of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, cross-T/main beam interface, and alignment, hanging, adjustment and attachment clips, and other connector and holddown clips as needed, complying with seismic design requirements.
1. Basis-of-Design Products: Armstrong Axiom.
 - a. Axiom One-Piece Trim for Drywall, 4 inches; No. AX1PC4STR.
 2. Baked-Polyester: Trim manufacturer's standard. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - a. Colors and Patterns: As selected by Architect from manufacturer's available colors and patterns.
 3. Warranty Period:
 - a. Perimeter Trim Components: Ten (10) years from date of substantial completion.

2.7 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C 475/C 475M.
- B. Joint Tape:
 - 1. Interior Gypsum Board: Paper.
 - 2. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
 - 3. Backing Panels: As recommended by panel manufacturer.
- C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
 - 1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
 - 2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use drying-type, all-purpose compound.
 - a. Use setting-type compound for installing paper-faced metal trim accessories.
 - 3. Fill Coat: For second coat, use setting-type, sandable topping compound.
 - 4. Finish Coat: For third coat, use setting-type, sandable topping compound.
 - 5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound or high-build interior coating product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish.
- D. Joint Compound for Backing Panels:
 - 1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
 - 2. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.8 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
- B. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.
 - 1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
 - 2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- C. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
 - 1. Adhesives shall have a VOC content of 50 g/L or less.
- D. Thermal Insulation: As specified in Section 072100 "Thermal Insulation."
- E. Acoustical Sealant: As specified in Section 079219 "Acoustical Joint Sealants."
- F. Firestop Putty Pads for Electrical Boxes: As specified in Section 078413 "Penetration Firestopping."
- G. Acoustic Putty Pads for Electrical Boxes: As specified in Section 079219 "Acoustical Joint Sealants."
- H. Sound-Attenuation Insulation: As specified in Section 098100 "Acoustical Insulation."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLYING AND FINISHING PANELS, GENERAL

- A. Comply with ASTM C 840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.
- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
 - 2. Fit gypsum panels around ducts, pipes, and conduits.
 - 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch- (6.4- to 12.7-mm-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- I. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Gypsum board shall be held back from intersecting surfaces at the perimeter of edges of sound-resistance-rated partitions a minimum 1/4-inch. Finish over sealed joints with tape and compound, and sand and finish to match adjacent surfaces. Comply with ASTM C 919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
- J. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.3 APPLYING INTERIOR GYPSUM BOARD

- A. Install interior gypsum board in the following locations:
1. Type X: Typical interior surfaces.
 2. Flexible Type: As indicated on Drawings at cove lights. Apply in double layer at curved assemblies.
 3. Mold-Resistant Type: As indicated on Drawings and where gypsum board must be installed prior to building being enclosed and conditioned.
 4. Glass-Mat Interior Type: As option where gypsum board must be installed prior to building being enclosed and conditioned.
- B. Single-Layer Application:
1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
 2. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
 - a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
 - b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
 3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
 4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.
- C. Multilayer Application:
1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches (400 mm) minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
 2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
 3. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
 4. Fastening Methods: Fasten base layer with screws; fasten face layers with adhesive and supplementary fasteners.
- D. Curved Surfaces:
1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 12-inch- (300-mm-) long straight sections at ends of curves and tangent to them.
 2. For double-layer construction, fasten base layer to studs with screws 16 inches (400 mm) o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches (300 mm) o.c.

3.4 INSTALLATION OF BACKING PANELS

- A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at non-wet locations indicated to receive tile or other indicated finish materials. Install with 1/4-inch (6.4-mm) gap where panels abut other construction or penetrations.
- B. Cementitious Backer Units: ANSI A108.11, at wet area locations indicated to receive tile or other indicated finish materials.

- C. Where backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.5 INSTALLING TRIM ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by Architect for visual effect.
- C. Interior Trim: Install in the following locations:
 - 1. Cornerbead: Use at outside corners unless otherwise indicated.
 - 2. LC-Bead: Use at exposed panel edges.
 - 3. L-Bead: Use where indicated.
 - 4. U-Bead: Use at exposed panel edges.
- D. Firestop Putty Pads: Install at electrical boxes located in fire-rated partitions. Install in accordance with pad manufacturer's instructions.
- E. Acoustic Putty Pads: Install at electrical boxes located in acoustic-rated partitions. Install in accordance with pad manufacturer's instructions.

3.6 FINISHING GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Prefill open joints and damaged surface areas.
- C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
- D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840:
 - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
 - 2. Level 2: Panels that are substrate for tile.
 - 3. Level 3: Panels that are substrate for heavy grade wall coverings.
 - 4. Level 4: Level 4: At typical panel surfaces that will be exposed to view unless otherwise indicated.
 - a. Primer and its application to surfaces are specified in Section 099123 "Interior Painting."
 - 5. Level 5: Below and inside cove lighting or wall wash lighting, surfaces to receive wall covering or wall covering graphic signage, or as indicated on drawings.
 - a. Primer and its application to surfaces are specified in Section 099123 "Interior Painting."
- E. Glass-Mat Interior Gypsum Board: Finish according to manufacturer's written instructions to suit applications. Exposed surfaces shall have level 5 finish.
- F. Glass-Mat Faced Backer Panels: Finish according to manufacturer's written instructions.
- G. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.7 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.

- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 093013 - TILING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wall tile.
 - 2. Setting materials.
 - 3. Waterproofing, crack isolation and uncoupling membranes.
 - 4. Grout materials.
 - 5. Metal edge strips.

- B. Related Requirements:
 - 1. Section 079200 "Joint Sealants" for sealing of movement joints in tile surfaces.
 - 2. Section 092900 "Gypsum Board" for tile backing panels.

1.2 DEFINITIONS

- A. General: Definitions in ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Face Size: Actual tile size, excluding spacer lugs.
- C. Large Format Tile: Tile with at least one edge 15 inches or longer.
- D. Module Size: Actual tile size plus joint width indicated.
- E. Wet Area: The term "wet area" refers to shower rooms and other areas with similar usages. It does not refer to toilet rooms and other similar areas where water on the floor is seldom encountered.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show locations, plans, and elevations, of each type of tile and tile pattern. Show widths, details, and locations of movement joints in tile substrates and finished tile surfaces.
- C. Samples for Initial Selection: For accessories involving color selection or shade variation.
- D. Samples for Verification:
 - 1. Three full-size units of each type and composition of tile and for each color and finish required showing variations in color, texture and pattern.
 - 2. Metal edge strips; 6-inch lengths.

1.5 QUALITY ASSURANCE

- A. Minimizing Tile Lippage: Tolerance for lippage on installed tiles shall meet or exceed the requirements of ANSI A108.2:

1. Tile Joint of 1/4 inch or less: 1/32 inch allowable lippage.
 - a. It is recommended, though not required, that tiles greater than 12 inches in either edge dimension should be installed using a leveling system designed to control lippage and other related installation control activities in accordance with ANSI A108.03; Section 4.3.7.

B. Provide the following upon request:

1. Qualification Data: For Installer.
2. Product Certificates: For each type of product, including product use classification.
3. Product Test Reports: For tile-setting and -grouting products.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Tile: Obtain tile of each type and color or finish from single source or producer.
 1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.
 2. Endeavor to provide manufacturer's full system warranty as much as possible.
- B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.
 1. Obtain setting and grouting materials, except for unmodified portland cement and aggregate, from single manufacturer.

2.2 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
 1. Provide tile complying with Standard Grade requirements unless otherwise indicated.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

- C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
 - 1. Where tile is indicated for installation in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.

2.3 TILE PRODUCTS

- A. General: Refer to Drawings for Basis-of-Design tile type, manufacturer, and size. Comparable products by one of the listed manufacturers may be submitted for approval by Architect. Comparable products shall be equivalent in size, color, pattern, thickness and type.
- B. Acceptable Manufacturers: Manufacturer's that may provide products comparable to the basis-of-design products listed on the Drawings, include the following:
 - 1. Crossville, Inc.
 - 2. DalTile Group, Inc.
 - 3. Walker Zanger

2.4 THRESHOLDS

- A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.
 - 1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/16 inch (1.5 mm) above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch (12.7 mm) or less above adjacent floor surface.
- B. Solid Surface Material Thresholds: Homogeneous-filled plastic resin complying with ICPA SS-1 and Section 123661.16.
 - 1. Type: Standard Type.
 - a. Basis-of-Design Product: Du Pont; Corian or equal.
 - 2. Width: As indicated. Center width under door at door openings.
 - 3. Length: As indicated full length or as needed to transition full width of door opening.
 - 4. Colors and Patterns: As selected by Architect from solid surface material manufacturer's available colors and patterns.

2.5 TILE BACKING PANELS

- A. Specified in Section 092900 "Gypsum Board."

2.6 LIQUID WATERPROOF / CRACK ISOLATION MEMBRANE

- A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:
 - 1. Ardex Americas
 - 2. Custom Building Products

3. Laticrete International, Inc.
4. MAPEI Corporation.

C. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following or Architect approved equal by listed manufacturer:
 - a. Laticrete International, Inc.; Laticrete Hydro Ban.

2.7 CRACK ISOLATION SHEET MEMBRANE

A. General: Manufacturer's standard product that complies with ANSI A118.12 for high performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:

1. Ardex Americas
2. Custom Building Products
3. Laticrete International, Inc.
4. MAPEI Corporation.

C. Crack Isolation Membrane: High-performance, pliable, polymer-modified self-adhesive crack isolation membrane.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following or Architect approved equal by listed manufacturer:
 - a. Product: Laticrete International, Inc.; Fracture Ban

2.8 UNCOUPLING MEMBRANE

A. General: Manufacturer's standard product that complies with ANSI A118.12 for high performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Uncoupling Membrane: ASTM C 627 and ANSI A118.12.

1. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's:
 - a. Custom Building Products
 - b. Laticrete International, Inc.
 - c. Mapei Corporation
 - d. Schluter Systems, LLP.
2. Basis-of-Design Product: Schluter Ditra

2.9 SETTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.

1. Cleavage Membrane: Asphalt felt, ASTM D 226/D 226M, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils (0.1 mm) thick.

B. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:

1. ARDEX Americas.
2. Custom Building Products.

3. Laticrete International, Inc.
4. MAPEI Corporation.

C. Modified Dry-Set Mortar (Thinset): ANSI A118.4.

1. Floors:
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide the following or Architect approved equal by listed manufacturer:
 - 1) Wall Product: Laticrete International Inc.; Laticrete 254 Platinum, or 254R for rapid-setting..
2. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to other requirements in ANSI A118.4.
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide the following or Architect approved equal by listed manufacturer:
 - 1) Wall Product: Laticrete International Inc.; Laticrete 255 MultiMax.

2.10 GROUT MATERIALS

A. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:

1. ARDEX Americas.
2. Custom Building Products.
3. Laticrete International, Inc.
4. MAPEI Corporation.

B. High-Performance Tile Grout: ANSI A118.7.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following or Architect approved equal by listed manufacturer:
 - a. Laticrete International Inc.; Permacolor grout.

C. Water-Cleanable Epoxy Grout: ANSI A118.3.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following or Architect approved equal by listed manufacturer:
 - a. Laticrete International, Inc.; Laticrete SpectraLOCK Pro Premium.

D. Reference Finish Schedule for grout color. Confirm joint thickness with Architect.

2.11 METAL EDGE STRIPS

A. Metal Edge Strips: Tile edge protection and transitions strips of width shown, of height required to protect exposed edges of tile, and maximum available lengths to minimize running joints; satin anodized aluminum.

1. Basis of Design Manufacturers: Subject to compliance with requirements, provide basis-of-design shapes indicated as manufactured by the following:
 - a. Schluter Systems, LP, or comparable by one of the following:
 - 1) Blanke Corporation.
 - 2) Progress Profiles.
2. Basis-of-Design Products: As occurs. Sizes as indicated on Drawings.
 - a. Tile wainscot top and exposed Edges: Schluter Rondec-DB.
 - b. Other conditions as required or indicated as directed by Architect.

2.12 MISCELLANEOUS MATERIALS

- A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
 - 1. Basis-of-Design Products: Subject to compliance with requirements, provide the following, or Architect approved equal:
 - a. Ardex Americas; K15, V-1200, or Feather Finish, or approved equal, as required to suit conditions.
- B. Vapor-Retarder Membrane: Polyethylene sheeting, ASTM D 4397, 4.0 mils thick, tape seams.
- C. Mesh Tape: 2-inch wide self-adhesive fiberglass mesh tape as instructed by backer manufacturer.
- D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.13 ELASTOMERIC SEALANTS

- A. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the applicable requirements in Section 079200 "Joint Sealants."
 - 1. Sealants shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.
- B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints unless otherwise indicated.

2.14 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 - 2. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
 - 3. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove coatings that are incompatible with tile-setting materials.
- B. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.
- C. Substrate Flatness:
 - 1. For tile shorter than 15 inches, confirm that structure or substrate is limited to variation of 1/4 inch in 10 ft. from the required plane, and no more than 1/16 inch in 12 inches when measured from tile surface high points.
 - 2. For large format tile, tile with at least one edge 15 inches or longer, confirm that structure or substrate is limited to 1/8 inch in 10 ft. from the required plane, and no more than 1/16 inch in 24 inches when measured from tile surface high points.

3.3 TILE BACKING PANEL INSTALLATION

- A. Install backer units and treat joints according to Section 092900 "Gypsum Board."

3.4 INSTALLATION OF CERAMIC TILE SYSTEM

- A. Install waterproof membrane to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.
 - 1. Allow waterproof membrane to cure and verify by testing that it is watertight before installing tile or setting materials over it.
- B. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
 - 1. Add materials, water, and additives in accurate proportions.
 - 2. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.
- C. Install tile in accordance with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of ANSI A108 series that are referenced in TCNA installation methods and specified in tile installation schedules, and apply to types of setting and grouting materials used.
 - 1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:
 - a. Tile floors in wet areas.
 - b. Tile floors consisting of tiles 8 by 8 inches or larger.
 - c. Tile floors consisting of rib-backed tiles.
- D. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

- E. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
- F. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.
- G. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.
- H. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
 - 1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
 - 2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
 - 3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
- I. Joint Widths: Unless otherwise indicated, match walls and floors, and install tile with joint widths as directed by Architect.
- J. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.
- K. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
 - 1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
 - 2. Apply sealant and back-up to joints.
 - 3. Apply sealant to junction of tile and dissimilar materials and junction of dissimilar planes.
- L. Solid Surface Thresholds: Install thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
 - 1. Do not extend cleavage membrane, waterproofing, or crack isolation membrane under thresholds set in modified dry-set mortar. Fill joints between such thresholds and adjoining tile set on waterproofing or crack isolation membrane with elastomeric sealant.
- M. Metal Edge Strips: Install at exposed edges, and where edge of tile flooring meets carpet or resilient flooring that finishes flush with or below top of tile and no threshold is indicated.

3.5 FLUID-APPLIED WATERPROOFING / CRACK ISOLATION MEMBRANE INSTALLATION

- A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.
- B. Allow waterproofing to cure and verify by testing for watertightness before installing tile or setting materials over it.

3.6 CRACK ISOLATION SHEET MEMBRANE INSTALLATION

- A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness that is bonded securely to substrate.
- B. Allow crack isolation membrane to cure before installing tile or setting materials over it.

- C. When allowed by waterproof membrane manufacturer, crack isolation membrane may be omitted where fluid-applied waterproofing is indicated.

3.7 INSTALLATION - FLOORS - THIN-SET METHODS

- A. General: Refer to TCNA design methods and tile installation Schedule at the end of this Section to suit condition. Not all conditions may be listed, and in some cases methods have been modified and combined to meet specific project conditions

3.8 INSTALLATION - FLOORS - MORTAR BED METHODS

- A. General: Refer to TCNA design methods and tile installation Schedule at the end of this Section to suit condition. Not all conditions may be listed, and in some cases methods have been modified and combined to meet specific project conditions

3.9 INSTALLATION - WALL TILE

- A. General: Refer to TCNA design methods and tile installation Schedule at the end of this Section to suit condition. Not all conditions may be listed, and in some cases methods have been modified and combined to meet specific project conditions
- B. Over cementitious backer board on vapor retarder membrane on metal studs, install with modified non-sagging cement mortar adhesive in accordance with TCNA Method W244 with high-performance grout.
- C. Over coated glass mat backer board on metal studs, install with modified non-sagging cement mortar adhesive in accordance with TCNA Method W248 with high-performance grout.

3.10 ADJUSTING AND CLEANING

- A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
 - 1. Replace tiles that do not meet lippage requirements.
- B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 - 1. Remove grout residue from tile as soon as possible.
 - 2. Clean grout smears and haze from tile in accordance with tile and grout manufacturer's written instructions. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.11 PROTECTION

- A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
- C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.12 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

- A. General: Utilize the following as applicable to conditions indicated on Drawings. Consult with Architect for questions or possible conflicts.
1. Grout Type: Use water-cleanable epoxy grout, unless otherwise indicated.
- B. Interior Floor Installations, Concrete Subfloor:
1. Tile Installation: TCNA F114 and ANSI A108.1C; cement mortar bed on cleavage membrane, epoxy grout, on- or above- grade.
 - a. Tile Type: Non-large format floor tile as indicated.
 - b. Setting: Tile set with dry-set bond coat on unreinforced mortar bed over cleavage membrane, with total thickness to allow tile in recessed concrete slab set flush with adjacent flooring as indicated.
 - c. Grout: Water-cleanable epoxy grout.
 2. Tile Installation: TCNA F114 (Modified) and ANSI A108.1C; Bond coat on uncoupling membrane on unbonded cement mortar bed, epoxy grout, on- or above- grade.
 - a. Tile Type: Any large format tile type.
 - b. Setting: Tile set with dry-set bond coat on uncoupling membrane set with dry-set bond coat on unreinforced mortar bed over cleavage membrane, with total thickness to allow tile in recessed concrete slab set flush with adjacent flooring as indicated.
 - 1) Bond Coat: Thinset mortar compatible with uncoupling membrane, either modified or unmodified as instructed by uncoupling membrane manufacturer.
 - c. Grout: Water-cleanable epoxy grout.
 3. Tile Installation: TCNA F115; thinset mortar; epoxy grout, on- ground.
 - a. Tile Type: Non-large format floor tile as indicated.
 - b. Thinset Mortar: Modified dry-set mortar.
 - c. Grout: Water-cleanable epoxy grout.
 4. Tile Installation: TCNA F115A; thinset mortar; epoxy grout, above- ground.
 - a. Tile Type: Non-large format floor tile as indicated.
 - b. Thinset Mortar: Modified dry-set mortar.
 - c. Grout: Water-cleanable epoxy grout.
 5. Tile Installation: TCNA F121 and ANSI A108.1A; waterproofing/crack isolation membrane on unbonded cement mortar bed, on- or above- grade.
 - a. Tile Type: Non-large format tile indicated over waterproof membrane.
 - b. Setting: Tile set with thinset dry-set bond coat over cured liquid-applied waterproof/crack isolation membrane bonded to mortar bed over unbonded cleavage membrane, sloped to drain, with total thickness to allow flush set tile in recessed concrete slab as indicated but not more than 2 inches. Turn up waterproofing at wall base at least 6 inches.
 - 1) Bond Coat: Thinset mortar compatible with waterproof membrane, either modified or unmodified as instructed by waterproofing manufacturer.
 - c. Grout: Water-cleanable epoxy grout.
 - d. At full-tiled shower, place mortar bed over loose laid shower pan membrane per ASTM D 4068 in lieu of cleavage membrane.
 6. Tile Installation: TCNA F121 (Modified), TCNA F114, and ANSI A108.1C; cement mortar bed on uncoupling membrane on waterproof membrane, on- or above- grade.
 - a. Tile Type: Any large format tile type.

- b. Setting: Tile set with thinset dry-set bond coat on uncoupling membrane set with dry-set bond coat over cured liquid-applied waterproof/crack isolation membrane bonded to unreinforced, 1/2- to 5/8-inch medium-set mortar bed, sloped to drain, with total thickness to allow flush set tile in recessed concrete slab as indicated but not more than 2 inches. Turn up waterproofing at wall base at least 6 inches.
 - 1) Bond Coat: Thinset mortar compatible with uncoupling membrane, either modified or unmodified as instructed by uncoupling membrane manufacturer.
 - c. Grout: Water-cleanable epoxy grout.
 - d. At full-tiled shower, place mortar bed over loose laid shower pan membrane per ASTM D 4068 in lieu of cleavage membrane.
7. Tile Installation: TCNA F122; thinset mortar on waterproof membrane, on- grade.
- a. Tile Type: Non-large format floor tile as indicated.
 - b. Setting: Tile thinset with bond coat on bonded waterproof/crack isolation membrane.
 - c. Grout: Water-cleanable epoxy grout.
8. Tile Installation: TCNA F122A; thinset mortar on waterproof membrane, above- grade.
- a. Tile Type: Non-large format floor tile as indicated.
 - b. Setting: Tile thinset with bond coat on bonded waterproof/crack isolation membrane.
 - c. Grout: Water-cleanable epoxy grout.
9. Tile Installation: TCNA F122/F-122A (Modified); thinset mortar on uncoupling membrane on waterproof membrane, on- / above- grade.
- a. Tile Type: Any large format tile type
 - b. Setting: Tile thinset with bond coat on uncoupling membrane set with bond coat on waterproof membrane.
 - 1) Bond Coat: Thinset mortar compatible with uncoupling membrane, either modified or unmodified as instructed by uncoupling membrane manufacturer.
 - c. Grout: Water-cleanable epoxy grout.
- C. Interior Wall Installations, Metal Studs or Furring:
- 1. TCNA W244C or W244F: Thinset mortar on cementitious backer units over vapor-retarder.
 - a. Tile Type: As indicated.
 - b. Thinset Mortar: Modified dry-set mortar.
 - c. Grout: High-performance grout.
 - 2. TCNA W245 : Thinset mortar on glass-mat, water-resistant gypsum backer board.
 - a. Ceramic Tile Type: As indicated.
 - b. Thinset Mortar: Modified dry-set mortar.
 - c. Grout: High-performance grout.
- D. Shower Receptor and Wall Installations, as occurs:
- 1. Tile Installation: TCNA B415; thinset mortar on cementitious backer units or fiber-cement backer board over vapor-retarder membrane.
 - a. Tile Type: Wall tile as indicated.
 - b. Thinset Mortar: Modified dry-set mortar.
 - c. Grout: High-performance grout with grout sealer or epoxy grout.
 - 2. Tile Installation : TCNA B420; thinset mortar on waterproof membrane over coated glass-mat, water-resistant gypsum backer board.
 - a. Tile Type: Wall tile as indicated.
 - b. Thinset Mortar: Modified dry-set mortar.
 - c. Grout: High-performance grout with grout sealer or epoxy grout at wet areas.

3. For tile walls with waterproofing, use fluid-applied waterproofing on tile backer board and allow to cure before setting tile with mortar bond coat. Lap over waterproofing at base.

END OF SECTION 093013

SECTION 095100 - SUSPENDED ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes acoustical panels and exposed suspension systems for interior ceilings.
- B. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

1.2 COORDINATION

- A. Coordinate layout and installation of suspended ceilings and suspension systems with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies. Indicate locations on coordination drawings.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Provide layout of suspended acoustical ceilings coordinated with other trades that will penetrate the ceiling panels or interfere with the installation and recessed or surface mounted devices located within the ceiling panels. Indicate method of suspension where interference exists.
 - 1. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - a. Suspended ceiling components.
 - b. Structural members to which suspension systems will be attached.
 - c. Size and location of initial access modules for panels.
 - d. Items penetrating finished ceiling including, but not limited to, the following:
 - 1) Lighting fixtures.
 - 2) Air outlets and inlets.
 - 3) Speakers.
 - 4) Sprinklers.
 - 5) AV/IT devices.
 - 6) Access panels.
- C. Samples for Initial Selection: For components with factory-applied finishes requiring selection.
- D. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of sizes indicated below:
 - 1. Acoustical Panels: Set of 6-inch- (150-mm-) square Samples of each type, color, pattern, and texture.
 - 2. Exposed Suspension-System Members, Moldings, and Trim: Set of 6-inch- (150-mm-) long Samples of each type, finish, and color.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Evaluation Reports: Suspension system, perimeter seismic clips, and cast-in-place and post-installed anchors and fasteners shall have current evaluation reports provided by ICC or equivalent ANSI accredited certification agency.
- B. Provide the following upon request:
 - 1. Qualification Data: For testing agency and professional engineer.
 - 2. Product Test Reports: For each acoustical panel ceiling, for tests performed by manufacturer and witnessed by a qualified testing agency.
 - 3. Evaluation Reports: For each acoustical panel ceiling suspension system, perimeter seismic clips, and anchors and fastener types, from ICC-ES.
 - 4. Field quality-control reports.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
 - 1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.
- B. Basis-of-Design Products: Subject to compliance with requirements, provide products listed in the drawings as manufactured by the following:
 - 1. Armstrong Commercial Products, or comparable by one of the following:
 - a. CertainTeed, a Saint Goban Company
 - b. USG Corp

2.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Suspended ceilings shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Class A according to ASTM E 1264.
 - 2. Smoke-Developed Index: 450 or less.

2.3 SUSPENDED ACOUSTICAL CEILING PANELS (CLG-1, CLG-2 and CLG-6)

- A. Basis-of-Design Products: Subject to compliance with requirements, provide products indicated on Drawings.
1. Edge: As indicated on Drawings according to manufacturer's product designation.
 2. Color: As indicated.
- B. Acoustical Panel Standard: Provide manufacturer's standard panels according to ASTM E 264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.
- C. Metal Suspension-System Standard: Provide manufacturer's standard, direct-hung, metal suspension system and accessories according to ASTM C 635/C 635M and designated by type, structural classification, and finish indicated.
1. Classification: Heavy-duty
 2. Color: As indicated.

2.4 INTEGRATED CEILING SYSTEMS (CLG-4)

- A. Integrated Ceiling: Subject to compliance with requirements, provide products from Armstrong World Industries, Inc indicated on Drawings, or Architect approved equal from other acceptable manufacturers listed.
1. Integrated Ceiling System: Armstrong TechZone as indicated on Drawings.
 2. Panel Product: As indicated.
 3. Integrated Components: As indicated on Drawings, including lighting, diffusers, fire sprinklers, and other items indicated.
 4. Accessories: Linear lighting yokes, clips, transition components, and shadowline perimeter wall angles. Provide manufacturer's standard components and the following where indicated:
 - a. Armstrong Window Shade Pocket AXP355s
 - b. Armstrong Axiom Transition 6" AXTR6STR
 5. Other acceptable manufacturers:
 - a. CertainTeed Corporation.
 - b. United States Gypsum Company.

2.5 ACCESSORIES

- A. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E 488/E 488M or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: Cast-in-place or postinstalled expansion and bonded anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated according to ASTM B 633, Class SC 1 (mild) service condition.
 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 10times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.
 3. Provide attachment devices with current ICC Evaluation Service Report (ESR) acceptable to authority having jurisdiction.
- B. Wire Hangers, Braces, and Ties: Provide wires as follows:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
2. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than the following diameter wire.
 - a. Strength: 90 lbs, minimum strength of vertical wire connection device to structure.
 - b. Size: Minimum.
 - 1) Hanger Wire Size: 0.106 inch (No. 12-gauge diameter wire).
 - 2) Seismic Bracing Wire Size: 0.106 inch (No. 12-gauge diameter wire).
 - 3) Slack Safety Wire Size: 0.106 inch (No. 12-gauge diameter wire).
- C. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
- D. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- E. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1-mm-) thick, galvanized-steel sheet complying with ASTM A 653, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
- F. Seismic Clips: Manufacturer's standard seismic clips designed to secure acoustical panels in place during a seismic event.
- G. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
- H. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.

2.6 METAL EDGE MOLDINGS AND TRIM

- A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
 1. Edge moldings shall fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
 - a. Seismic Requirements: Provide (50 mm) manufacturer's seismic perimeter clips used with standard nominal 7/8-inch (22 mm) wall angles, with current ICC Evaluation Service Report (ESR) acceptable to authority having jurisdiction.
 2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly with 2-inch (50 mm) oversize ring.
- C. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements.
 1. Basis-of-Design Products: Armstrong Axiom; sizes as indicated.
 2. Baked-Enamel or Powder-Coat Finish: Minimum dry film thickness of 1.5 mils (0.04 mm). Comply with ASTM C 635 and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.
- B. Layout openings for penetrations centered on the penetrating items.

3.3 INSTALLATION

- A. General: Install suspended acoustical ceilings according to ASTM C 636, manufacturer's written instructions, recommendations of CISCA's "Ceiling Systems Handbook," and the following seismic design requirements.
 - 1. Seismic Design Requirements: Install in accordance with the following:
 - a. ASTM E 580/E580M Section 5 for Seismic Design Categories D, E, and F, including applicable ASCE 7 requirements.
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means. Maximum splay (plumb) of vertical hanger wires shall be 1 in 6.
 - 3. Provide horizontal restraint (splay wires or rigid bracing) within 2 inches of intersection and splayed 90 deg apart at 45 degree angles for areas over 1000 sq. ft.
 - 4. Provide compression posts (struts) 12 inches on center in both directions starting at 6 inches from walls.
 - 5. Splay bracing connection strength shall not be less than 250 lbs.
 - 6. Provide seismic separation joints for areas larger than 2500 sq. ft. and with length to width ratio less than or equal to 4:1.
 - 7. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - 8. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 - 9. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

10. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 11. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 12. Do not attach hangers to steel deck tabs.
 13. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 14. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
 15. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
 16. Provide rigid bracing for ceiling plane elevation changes.
 17. Partition bracing shall be independent of ceiling splay bracing.
- C. Light Fixtures:
1. Mechanically attach light fixtures to grid according to NEC 410. Provide two mechanical attachments per fixture unless independently supported.
 2. Attach surface-mounted fixtures attached to grid with positive clamping devices connected to the structure or vertical hanger wires.
 3. Directly support pendant-hung fixtures from structure with 9-gauge wire.
 4. Rigid lay-in or recessed can light fixtures:
 - a. Less than 10 lbs: Provide minimum one wire from fixture to structure.
 - b. 10 to 56 lbs: Provide two wires from fixture to structure.
 - c. Greater than 56 lbs: Support fixture directly to structure with approved hangers.
 - d. Rigid conduit attached to light fixtures is permitted, unless otherwise indicated.
- D. Other Services:
1. Air Terminals:
 - a. Less than 20 lbs: Attach positively to grid.
 - b. 20 to 56 lbs: Attach positively to grid and provide two 12-gauge wire hangers from fixture to structure.
 - c. Greater than 56 lbs: Support fixture directly to structure with approved hangers.
 2. Sprinkler heads and other penetrations: Minimum 2 inch diameter opening or use flexible sprinkler hose fitting, unless otherwise indicated.
 3. Cable trays and electrical conduit shall be independently supported and braced.
- E. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- F. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Install perimeter hanger wires not more than 8 inches from adjacent walls.
 2. Install stabilizer bars at perimeter tee ends to prevent spreading.
 3. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 4. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends. Miter corners accurately and connect securely.
 5. Do not use exposed fasteners, including pop rivets, on moldings and trim.
 6. Provide perimeter clearances required for seismic reactions.
- G. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

- H. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.
 - 1. Arrange directionally patterned acoustical panels as follows:
 - a. As indicated on reflected ceiling plans.
 - 2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
 - 3. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
 - 4. Install seismic clips in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.
 - 5. Protect lighting fixtures and air ducts according to requirements indicated for fire-resistance-rated assembly.

3.4 ERECTION TOLERANCES

- A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.
- B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.

3.5 FIELD QUALITY CONTROL

- A. Special Inspections: University will engage a qualified special inspector to perform the following special inspections:
 - 1. Periodic inspection during the installation of suspended ceiling grids according to ASCE/SEI 7.
- B. Testing Agency: University will engage a qualified testing agency to perform tests and inspections.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages and when installation of ceiling suspension systems on each floor has reached 20 percent completion, but no panels have been installed. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.
 - 1. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf of tension.
 - 2. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.6 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.
- B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 095426 - SUSPENDED WOOD CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wood-veneer, flat-perforated-panel ceilings. (CLG-3)

1.2 COORDINATION

- A. Coordinate layout and installation of wood ceilings and suspension systems with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
- C. Shop Drawings: For suspended wood ceilings.
 - 1. Include reflected ceiling plans, sections, and details, drawn to scale, showing the following:
 - a. Wood ceiling patterns and joints.
 - b. Ceiling suspension members.
 - c. Method of attaching hangers to building structure and locations of cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
 - d. Ceiling-mounted items including, but not limited to, light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.
 - e. Ceiling perimeter and penetrations through ceiling; trim and moldings.
- D. Samples for Verification: For the following products:
 - 1. Wood Ceilings: 12-inch- (305-mm-) long by 12-inch- (305-mm-) wide or full-width Samples of each type, color, and finish.
 - 2. Suspension-System Members: 12-inch- (305-mm-) long Sample of each type.
 - 3. Exposed Molding and Trim: 12-inch- (305-mm-) long Samples of each type, color, and finish.
 - 4. Sound Absorbers: 12 inches (305 mm) long by full width.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Accredited by National Voluntary Laboratory Accreditation Program for testing indicated.
- B. Provide the following upon request:
 - 1. Qualification Data: For testing agency and professional engineer.
 - 2. Product Test Reports: For each acoustical panel ceiling, for tests performed by manufacturer and witnessed by a qualified testing agency.

3. Evaluation Reports: For each acoustical panel ceiling suspension system, perimeter seismic clips, and anchors and fastener types, from ICC-ES.
4. Field quality-control reports.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver ceiling components and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
 1. Store materials flat and level, raised from the floor.
- B. Handle ceiling components and accessories in a manner that prevents damage.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install interior ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
 1. Store and acclimatize wood products in the spaces where they will be installed for a minimum of 72 hours immediately before ceiling installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Criteria: Provide suspended wood ceilings designed and installed to withstand the effects of earthquake motions in accordance with ASCE/SEI 7 and requirements of authorities having jurisdiction.
- B. Certified Wood: Wood products shall comply with requirements of ASTM D7612-10 (FSC, SFI, ATSM, CSA or PEFC certifications are acceptable).

2.2 WOOD-VENEER, FLAT-PANEL CEILINGS

- A. Wood Panels (CLG-3): Manufacturer's standard panels consisting of wood veneer bonded to both faces of composite-wood core with exposed edges banded with the same veneer finish as the face with manufacturer's standard black finish Insert requirements.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Armstrong World Industries, Inc.
 - b. ASI Architectural.
 - c. USG Corporation.
 2. Surface-Burning Characteristics: Provide products with the following characteristics when tested in accordance with ASTM E84:
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 50 450 Insert value or less.
 3. Veneer Face Grade: Manufacturer's standard.
 4. Veneer Species: As indicated.
 5. Veneer Cut: Manufacturer's standard.
 6. Panel Perforation Pattern: As indicated by manufacturers designation.
 7. Panel NRC Rating: Not less than 0.65 when tested in accordance with ASTM C423.
 8. CAC: Not less than 37.

9. Acoustical Backing: Manufacturer's standard to provide NRC rating indicated for perforation pattern indicated, with flame-spread index of 25 or less and smoke-developed index of 450 or less as determined by testing in accordance with ASTM E84.
 10. Panel Surface Pattern: As indicated by manufacturer's designation.
 11. Panel Module: 24 by 48 inches (610 by 1219 mm).
 12. Panel Depth: 3/4 inch (19 mm).
 13. Panel Edges: Manufacturer's standard for 9/16 inch square, tegular grid installation.
 14. Veneer Adhesive: Manufacturer's standard that complies with "Performance Requirements" Article.
 15. Factory Finish: Manufacturer's standard finish; applied on every wood surface.
 - a. Type: Clear.
 - b. Gloss: Manufacturer's standard.
- B. Wood-Panel Accessories: Wood-panel manufacturer's accessories required to provide a complete installation of ceiling in accordance with manufacturer's written installation instructions.
1. Attachment Clips: Manufacturer's standard screw attached to back face of panels with square-cut edges to produce concealed-grid installation and allowing downward removal of ceiling panels.
 2. Safety Clips: Manufacturer's standard to prevent panels from dropping when disengaged from the suspension system.
 3. Safety Cables: Manufacturer's standard to prevent panels from falling to floor in event of grid failure.
 4. Border Clips: Manufacturer's standard angle type.
 5. Grid-Stabilizer Clips: Manufacturer's standard for oversize panels.
 6. Panel-Fixing Clip or Bracket: Manufacturer's standard that positively secures border and cut panels to the suspension system, so they cannot be removed from below.
 7. Veneer Edge Banding: Manufacturer's standard matching panels for treating cut edges; with pressure-sensitive adhesive backing.
 8. Wood-Board Edge Trim: Manufacturer's standard with core, veneer, and finish matching panel, complete with splice plates, clips, and brackets required for a complete installation in accordance with manufacturer's written instructions.
 - a. Board Width: 6 inches (152 mm).
 - b. Board Depth: 3/4 inch (19 mm).
- C. Grid Suspension System: ASTM C635/C635M; recommended in writing by ceiling and suspension-system manufacturers for applications indicated; main- and cross-runner system complete with suspension-system components required to support ceiling units and other ceiling-supported construction.
1. Structural Classification: Heavy-duty system.
 2. Face Width: 9/16 inch (14 mm).
 3. Finish: Flat black.
- D. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim channels of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, cross-T/main beam interface, and alignment, hanging, adjustment and attachment clips, and other connector and holddown clips, complying with seismic design requirements.
1. Basis-of-Design Products: Armstrong Axiom.
 - a. Axiom Straight Perimeter Trim, 2 inches; No. AX2STR
 - b. Axiom Straight Perimeter Trim, 8 inches; No. AX8STR
 2. Baked-Polyester: Trim manufacturer's standard. Comply with coting manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - a. Colors and Patterns: As selected by Architect from manufacturer's available colors and patterns.
 3. Warranty Period:
 - a. Perimeter Trim Components: Ten (10) years from date of substantial completion.

2.3 SUSPENSION-SYSTEM HANGERS, BRACES, AND TIES

- A. Attachment Devices: Size for 5 times the design load indicated in ASTM C635/C635M, Table 1, Direct Hung, unless otherwise indicated.
1. Cast-in-Place and Postinstalled Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 5 Insert safety factor times that imposed by ceiling construction as determined by testing in accordance with ASTM E488/E488M or ASTM E1512, as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: Cast-in-place Postinstalled expansion Postinstalled bonded anchors.
 - b. Corrosion Protection:
 - 1) Carbon-steel components zinc plated to comply with ASTM B633, Class Fe/Zn 5 (0.005 mm) for Class SC service condition (mild).
 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 Insert safety factor times that imposed by ceiling construction as determined by testing in accordance with ASTM E1190 conducted by a qualified testing and inspecting agency.
- B. Wire Hangers, Braces, and Ties: Provide wire complying with the following requirements:
1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
 2. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C635/C635M, Table 1, Direct Hung is less than yield stress of wire, but provide not less than 0.106-inch- (2.7-mm-) 0.135-inch- (3.4-mm-) Insert dimension diameter wire.
- C. Rods and Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- D. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed from 0.04-inch- (1.0-mm-) thick, galvanized-steel sheet complying with ASTM A653/A653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
- E. Seismic Stabilizer Bars: Grid-suspension-system manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
- F. Seismic Struts: Suspension-system manufacturer's standard compression struts designed to accommodate seismic forces.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing and substrates to which suspended wood ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage, and with requirements for installation tolerances and other conditions affecting performance of suspended wood ceilings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of suspended wood ceilings.
1. Balance border widths at opposite edges of each ceiling.
 2. Avoid using less-than-half-width units.

3.3 INSTALLATION OF SUSPENDED WOOD CEILINGS

- A. Comply with ASTM C636/C636M and seismic requirement indicated, in accordance with manufacturer's written instructions and Cisca's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns in 3 inches (76 mm). Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate to which hangers are attached and for type of hanger involved.
 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that does not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, power-actuated fasteners, or postinstalled mechanical or adhesive anchors that extend through forms into concrete.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than 48 inches (1219 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (203 mm) from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Light Fixtures:
1. Mechanically attach light fixtures to grid according to NEC 410. Provide two mechanical attachments per fixture unless independently supported.
 2. Attach surface-mounted fixtures attached to grid with positive clamping devices connected to the structure or vertical hanger wires.
 3. Rigid lay-in or recessed can light fixtures:
 - a. Less than 10 lbs: Provide minimum one wire from fixture to structure.
 - b. 10 to 56 lbs: Provide two wires from fixture to structure.
 - c. Greater than 56 lbs: Support fixture directly to structure with approved hangers.
 - d. Rigid conduit attached to light fixtures is permitted, unless otherwise indicated.
- D. Other Services:
1. Air Terminals:
 - a. Less than 20 lbs: Attach positively to grid.
 - b. 20 to 56 lbs: Attach positively to grid and provide two 12-gauge wire hangers from fixture to structure.
 - c. Greater than 56 lbs: Support fixture directly to structure with approved hangers.
 2. Sprinkler heads and other penetrations: Minimum 2 inch diameter opening or use flexible sprinkler hose fitting, unless otherwise indicated.
 3. Cable trays and electrical conduit shall be independently supported and braced.

- E. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns in 1-1/2 inches (38 mm). Suspend bracing from building's structural members as required for hangers and without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- F. Install edge moldings and trim at perimeter of ceiling area and where necessary to conceal edges and ends of wood units.
 - 1. Screw-attach metal moldings to substrate at intervals of not more than 16 inches (406 mm) o.c. and not more than 3 inches (76 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.7 m). Miter corners accurately and connect securely.
 - 2. Do not use exposed fasteners on moldings and trim.
- G. Grid Suspension Systems: Space main beams at 48 inches (1219 mm) o.c.
 - 1. Install cross tees to form modules sized in accordance with manufacturer's written installation instructions.
 - 2. Remove and replace dented, bent, or kinked members.
- H. Install wood components and accessories in accordance with manufacturer's written instructions and to accommodate natural expansion and contraction of wood products resulting from fluctuations in humidity.
- I. Cut wood components for accurate fit at borders and at interruptions and penetrations by other work through ceilings.
 - 1. Stiffen edges of cut wood components as required to eliminate variations in flatness.
- J. Install wood components in coordination with suspension system and moldings and trim.
- K. Install field-constructed access panels in locations indicated on Drawings.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: University will engage a qualified special inspector to perform the following special inspections:
 - 1. Periodic inspection during the installation of suspended ceiling grids according to ASCE/SEI 7.
- B. Testing Agency: University will engage a qualified testing agency to perform tests and inspections.
- C. Tests and Inspections: Testing and inspecting of completed installations of ceiling hangers, anchors, and fasteners to take place in successive stages, in test areas and using methods as follows. Do not proceed with installations of ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
 - 1. Test Areas: Test installation of ceiling suspension systems on each floor when installation has reached 20 percent completion but before wood ceilings have been installed.
 - a. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf (1957 N) of tension.
 - b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 CLEANING

- A. Clean exposed surfaces of ceilings, including trim and edge moldings. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented units.

END OF SECTION 095426

SECTION 096513 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Resilient wall base. (WB-#)
 - 2. Resilient molding accessories.
 - 3. Resilient stair accessories. (RF-8)
 - 4. Metal edging.

- B. Related Requirements:
 - 1. Section 096516 "Resilient Sheet Flooring" and Section 096723 "Resinous Flooring" for integral covered base.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples.
- C. Product Schedule: For resilient base and accessory products. Use same designations indicated on Drawings.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.

1.4 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive resilient products during the following time periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 THERMOPLASTIC-RUBBER BASE - WB-1 and WB-2

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following, unless otherwise indicated:
 - 1. Armstrong World Industries, Inc.
 - 2. Burke Flooring, A Mannington Commercial Company

3. Johnsonite; A Tarkett Company
 4. Nora Systems, Inc.
- B. Basis-of-Design Product: As indicated; refer to Finish Schedule on Drawings. Provide product indicated, or Architect approved equal by one of the other listed manufacturers.
- C. Product Standard: ASTM F 1861, Type TP (rubber, thermoplastic).
1. Group: I (solid, homogeneous).
 2. Style and Location:
 - a. Coved: For hard and resilient flooring with cove.
 - 1) Height: 4 inches
 - b. Straight (Topset): For carpeting without cove.
 - 1) Height: 4 inches
- D. Thickness: 0.125 inch.
- E. Lengths: Cut lengths 48 inches long or coils in manufacturer's standard length.
- F. Outside Corners: Preformed.
- G. Inside Corners: Job formed or preformed.
- H. Colors: As indicated; refer to Finish schedule on Drawings.

2.2 RUBBER MOLDING ACCESSORY

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Armstrong World Industries, Inc.
 2. Burke Flooring, A Mannington Commercial Company
 3. Johnsonite; A Tarkett Company
 4. Nora Systems, Inc.
- B. Description: Reducer strips for resilient flooring and carpet, transition strips, as required.
- C. Colors and Profiles: As selected by Architect from manufacturer's available colors and profiles.

2.3 RUBBER STAIR ACCESSORIES - RF-8

- A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following, unless otherwise indicated:
1. Armstrong World Industries, Inc.
 2. Burke Flooring, A Mannington Commercial Company
 3. Johnsonite; A Tarkett Company
 4. Nora Systems, Inc.
- C. Basis-of-Design Product: As indicated; refer to Finish Schedule on Drawings. Provide product indicated, or Architect approved equal by one of the other listed manufacturers.

- D. Stair Treads: ASTM F 2169.
 - 1. Type: TS (rubber, vulcanized thermoset)
 - 2. Class: 2 (pattern; embossed, grooved, or ribbed).
 - 3. Group: 2 (with contrasting color for the visually impaired).
 - 4. Nosing Style: Square.
 - 5. Nosing Height: 2 inches
 - 6. Thickness: 2 mm and tapered to back edge
 - 7. Size: Lengths and depths to fit each stair tread in one piece or, for treads exceeding maximum lengths manufactured, in equal-length units.

- E. Separate Risers: Smooth, flat; in height that fully covers substrate; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
 - 1. Style: Toeless, by length matching treads.
 - 2. Thickness: Manufacturer's standard]

- F. Landing Tile: Matching treads; produced by same manufacturer as treads and recommended by manufacturer for installation with treads

- G. Locations: Provide rubber stair accessories in areas indicated

- H. Colors and Patterns: As indicated.

2.4 METAL EDGE STRIPS

- A. Metal Edge Strips: Metal edge protection and transitions strips of width shown, of height required to protect exposed edges of resilient flooring, and maximum available lengths to minimize running joints; finish and color as indicated on Drawings.
 - 1. Basis of Design Manufacturers: Subject to compliance with requirements, provide basis-of-design shapes indicated as manufactured by the following:
 - a. Schluter Systems, LP, or comparable by one of the following:
 - 1) Blanke Corporation.
 - 2) Progress Profiles.
 - 2. Basis-of-Design Products: Style and sizes as indicated on Drawings.

2.5 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient-product manufacturer for applications indicated.

- B. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.
 - 1. Adhesives shall have a VOC content of 50 g/L or less and 60 g/L or less for rubber stair treads.

- C. Stair-Tread Nose Filler: Two-part epoxy compound recommended by resilient stair-tread manufacturer to fill nosing substrates that do not conform to tread contours.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Do not install resilient products until they are the same temperature as the space where they are to be installed.
 - 1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.
- C. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.3 RESILIENT BASE INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient base.
- B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
- C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
- D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- E. Do not stretch resilient base during installation.
- F. On irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- G. Preformed Corners: Install preformed corners before installing straight pieces.
- H. Job-Formed Corners:
 - 1. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches in length.
 - a. Miter or cope corners to minimize open joints.

3.4 RESILIENT ACCESSORY INSTALLATION

- A. Comply with manufacturer's written instructions for installing flooring accessories.
- B. Flooring Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed. Install metal edge strips where indicate don Drawings.
- C. Resilient Stair Accessories:
 - 1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
 - 2. Tightly adhere to substrates throughout length of each piece.
 - 3. For treads installed as separate, equal-length units, install to produce a flush joint between units.

3.5 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.
- B. Perform the following operations immediately after completing resilient-product installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum horizontal surfaces thoroughly.
 - 3. Damp-mop horizontal surfaces to remove marks and soil.
- C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION

SECTION 096516 - RESILIENT SHEET FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes resilient sheet flooring. (RF-#)
- B. Related Requirements:
 - 1. Section 090561.13 "Moisture Vapor Emission Control" for remediation of concrete floors that exceed moisture vapor limitations
 - 2. Section 096513 "Resilient Base and Accessories" for resilient wall base and accessories installed with resilient flooring.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of flooring. Include flooring layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 1. Show details of special patterns.
- C. Samples for Verification: In manufacturer's standard size, but not less than 6-by-9-inch sections of each different color and pattern of resilient sheet flooring required.
 - 1. For heat-welding bead, manufacturer's standard-size Samples, but not less than 9 inches long, of each color required.
- D. Product Schedule: For flooring. Use same designations indicated on Drawings.

1.3 INFORMATIONAL SUBMITTALS

- A. Certifications: Submit a certification signed by the manufacturer and installer stating that the resilient flooring has been installed as specified and in accordance with fire-test response characteristics.
- B. Field Test Reports: For concrete subfloor moisture and alkalinity field test results. Provide results to Architect and resilient flooring manufacturers.
- C. Certification: Signed by manufacturer and installer that subfloors meet or exceed requirements of product installation for moisture content and alkalinity.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of resilient sheet flooring to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Resilient Sheet Flooring: Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, in roll form and in full roll width for each type, color, and pattern of flooring installed.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for resilient sheet flooring installation and seaming method indicated.
 - 1. Engage an installer who employs workers for this Project who are trained or certified by resilient sheet flooring manufacturer for installation techniques required.
- B. Provide the following upon request;
 - 1. Qualification Data: For Installer.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient sheet flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store rolls upright.

1.8 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive resilient sheet flooring during the following time periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during resilient sheet flooring installation.
- D. Close spaces to traffic for 48 hours after resilient sheet flooring installation.
- E. Install resilient sheet flooring after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For resilient sheet flooring, as determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. FloorScore Compliance: Resilient flooring shall comply with requirements of FloorScore certification.

2.2 RUBBER SHEET FLOORING - RF-3 and RF-4

- A. Acceptable Manufacturers: Subject to compliance with requirements, provide product listed on Drawings by the following:
 - 1. Nora Systems, Inc, or Architect approved equal by one of the following:
 - a. Armstrong World Industries, Inc.
 - b. Mannington Commercial.
- B. Basis-of-Design Products: As indicated; refer to Finish Schedule on Drawings.

- C. Construction: Homogeneous vulcanized rubber compound with a marbleized design.
- D. Thickness: 3 mm
- E. Surface: Smooth
- F. Seamless-Installation Method: Provide heat welded seams where indicated on Drawings.
- G. Integral Cove: Provide integral cove base where indicated on Drawings. Chemical weld outside and inside corners. Height as indicated.

2.3 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by resilient sheet flooring manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by flooring and adhesive manufacturers to suit resilient sheet flooring and substrate conditions indicated.
 - 1. Adhesives shall have a VOC content of 50 g/L or less.
 - 2. Adhesives shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Seamless-Installation Accessories:
 - 1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.
 - a. Color: As selected by Architect from manufacturer's full range.
- D. Integral-Flash-Cove-Base Accessories:
 - 1. Cove Strip: 1-inch radius provided or approved by resilient sheet flooring manufacturer.
 - 2. Cap and End Stop Strip: Square metal, vinyl, or rubber cap provided or approved by resilient sheet flooring manufacturer. Type, material, and color as selected by Architect. Refer to Section 096513.
 - 3. Corners: Chemically bond inside and outside corners.
 - a. Chemical-Bonding Compound: Manufacturer's product for chemically bonding cove base seams at corners.
 - 1) Bonding compound shall have a VOC content of 510 g/L or less.
 - 2) Bonding compound shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient sheet flooring.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to resilient sheet flooring manufacturer's written instructions to ensure adhesion of resilient sheet flooring.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient sheet flooring manufacturer. Do not use solvents.
 - 3. Moisture Testing: Proceed with installation only after substrates pass testing according to resilient sheet flooring manufacturer's written recommendations, but not less stringent than the following:
 - a. Perform relative humidity test using in situ probes according to ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level.
 - b. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
 - 4. Alkalinity and Adhesion Testing: Perform tests recommended by resilient flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10 pH unless more stringent is required by resilient flooring manufacturer.
 - 5. If tests exceed stated limits, apply approved moisture vapor emission control product complying with ASTM F-3010 in accordance with Section 090561.13 and allow to cure before installing resilient sheet flooring.
 - 6. Submit test reports to Architect and flooring manufacturer.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install resilient sheet flooring until it is the same temperature as the space where it is to be installed.
 - 1. At least 48 hours in advance of installation, move flooring and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient sheet flooring.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 RESILIENT SHEET FLOORING INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient sheet flooring.
- B. Unroll resilient sheet flooring and allow it to stabilize before cutting and fitting.
- C. Lay out resilient sheet flooring as follows:
 - 1. Maintain uniformity of flooring direction.
 - 2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches away from parallel joints in flooring substrates.
 - 3. Match edges of flooring for color shading at seams.
 - 4. Avoid cross seams.
- D. Scribe, cut, and fit resilient sheet flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including pipes, outlets, and door frames.

- E. Extend resilient sheet flooring into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings. Install under permanent fixed cabinets and casework.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on resilient sheet flooring as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Install resilient sheet flooring on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of flooring installed on covers and adjoining flooring. Tightly adhere flooring edges to substrates that abut covers and to cover perimeters.
- H. Adhere resilient sheet flooring to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- I. Seamless Installation:
 - 1. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and heat weld with welding bead to permanently fuse sections into a seamless flooring. Prepare, weld, and finish seams to produce surfaces flush with adjoining flooring surfaces.
- J. Integral-Flash-Cove Base: Cove resilient sheet flooring to dimension indicated up vertical surfaces. Support flooring at horizontal and vertical junction with cove strip. Butt at top against cap strip.
 - 1. Chemical weld inside and outside corners.

3.4 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting resilient sheet flooring.
- B. Perform the following operations immediately after completing resilient sheet flooring installation:
 - 1. Remove adhesive and other blemishes from surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.
- C. Protect resilient sheet flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Cover resilient sheet flooring until Substantial Completion.

END OF SECTION

SECTION 096519 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Resilient tile flooring. (RF-#)
- B. Related Requirements:
 - 1. Section 090561.13 "Moisture Vapor Emission Control" for remediation of concrete floors that exceed moisture vapor limitations.
 - 2. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, stair treads, and other accessories installed with resilient floor coverings.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of flooring. Include flooring layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 1. Show details of special patterns.
- C. Samples for Verification: Full-size units of each color and pattern of floor tile required.
- D. Product Schedule: For flooring. Use same designations indicated on Drawings.

1.3 INFORMATIONAL SUBMITTALS

- A. Certifications: Submit a certification signed by the manufacturer and installer stating that the resilient flooring has been installed as specified and in accordance with fire-test response characteristics.
- B. Field Test Reports: For concrete subfloor moisture and alkalinity field test results. Provide results to Architect and resilient flooring manufacturers.
- C. Certification: Submit a certification signed by manufacturer and installer that subfloors meet or exceed requirements of product installation for moisture content and alkalinity.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor tile installation and seaming method indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by floor tile manufacturer for installation techniques required.

B. Provide the following upon request:

1. Qualification Data: For Installer.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

1.8 FIELD CONDITIONS

- A. 48 hours before installation.
- B. During installation.
- C. 48 hours after installation.
- D. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- E. Close spaces to traffic during floor tile installation.
- F. Close spaces to traffic for 48 hours after floor tile installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For resilient tile flooring, as determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. FloorScore Compliance: Resilient flooring shall comply with requirements of FloorScore certification.

2.2 LUXURY VINYL TILE - RF-1 and RF-2

- A. Manufacturers: Subject to compliance with requirements, provide products indicated on Drawing by the following:
 1. Mowhak Group, or Architect approved equal by one of the following:
 - a. Armstrong World Industires, Inc.
 - b. Mannington Commercial
- B. Basis-of-Design Product: As indicated; refer to Finish Schedule on Drawings.
- C. Standard: ASTM F1700, Class III printed film vinyl tile.
- D. Surface: Embossed
- E. Collection/Color: As indicated.

- F. Size: 18 by 36 inches
- G. Thickness: Not less than 5 mm overall with 20 mil wear layer.
- H. Warranty: Manufacturer's 20 year Commercial

2.3 RUBBER TILE FLOORING - RF-5

- A. Manufacturers: Subject to compliance with requirements, provide products indicated on Drawing by the following:
 - 1. Tarkett North America, or Architect approved equal by one of the following:
 - a. Armstrong World Industires, Inc.
 - b. Mannington Commercial
- B. Basis-of-Design Products: As indicated; refer to Finish Schedule on Drawings.
- C. Tile Standard: ASTM F 1344, Class I-B, homogeneous rubber tile, through mottled.
- D. Wearing Surface: Speckled
- E. Thickness: As standard with manufacturer for product indicated.
- F. Size, Nominal: 24 inches by 24 inches.
- G. Color: As indicated.

2.4 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.
 - 1. Adhesives shall have a VOC content of 60 g/L or less.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to resilient tile flooring manufacturer's written instructions to ensure adhesion of resilient tile flooring.
- B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient tile flooring manufacturer. Do not use solvents.
 3. Moisture Testing: Proceed with installation only after substrates pass testing according to resilient tile flooring manufacturer's written recommendations, but not less stringent than the following:
 - a. Perform relative humidity test using in situ probes according to ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level.
 - b. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
 4. Alkalinity and Adhesion Testing: Perform tests recommended by resilient tile flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10 pH unless more stringent is required by resilient flooring manufacturer.
 5. If tests exceed stated limits, apply approved moisture vapor emission control product complying with ASTM F-3010 in accordance with Section 090561.13 and allow to cure before installing resilient tile flooring.
 6. Submit test reports to Architect and flooring manufacturer.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install resilient tile flooring until it is the same temperature as the space where it is to be installed.
1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 RESILIENT TILE FLOORING INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient tile flooring.
- B. Allow resilient tile to acclimate and stabilize before cutting and fitting.
- C. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
- D. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings. Install under permanent fixed cabinets and casework.
- E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

3.4 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.
- B. Perform the following operations immediately after completing floor tile installation:
 1. Remove adhesive and other blemishes from exposed surfaces.
 2. Sweep and vacuum surfaces thoroughly.
 3. Damp-mop surfaces to remove marks and soil.

- C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Cover floor tile until Substantial Completion.

END OF SECTION

SECTION 096536 - STATIC-CONTROL RESILIENT FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Static-control, vinyl floor tile. (RF-6)

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of static-control resilient flooring. Include floor-covering layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 1. Show details of special patterns.
 - 2. Show locations of inscribed maintenance floor tiles in conductive, solid vinyl floor tile installation areas.
 - 3. Show grounding locations of grounding strips and connections.
- C. Samples: For each type of static-control resilient flooring and in each color, pattern, and texture required, in manufacturer's standard size, but not less than 6 by 9 inches.
- D. Product Schedule: For static-control resilient flooring. Use same designations indicated on Drawings.

1.3 INFORMATIONAL SUBMITTALS

- A. Certifications: Submit a certification signed by the manufacturer and installer stating that the resilient flooring has been installed as specified and in accordance with fire-test response characteristics.
- B. Field Test Reports: For concrete subfloor moisture and alkalinity field test results. Provide results to Architect and resilient flooring manufacturers.
- C. Certification: Submit a certification signed by manufacturer and installer that subfloors meet or exceed requirements of product installation for moisture content and alkalinity.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of static-control resilient flooring to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in installation techniques required by manufacturer for specified static-control resilient flooring.
 - 1. Engage an installer who employs workers for this Project who are trained or certified by manufacturer for installation techniques required for specified products.
- B. Provide the following upon request:
 - 1. Qualification Data: For Installer.
 - 2. Product Test Reports: For static-control resilient flooring, for tests performed by a qualified testing agency.
 - 3. Field quality-control reports.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store static-control resilient flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended in writing by manufacturer, but not less than 50 deg F or more than 90 deg F.
 - 1. Floor Tile: Store on flat surfaces.
 - 2. Sheet Floor Covering: Store rolls upright.

1.7 PROJECT CONDITIONS

- A. Maintain ambient temperatures in spaces to receive static-control resilient flooring within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, during the following time periods:
 - 1. Period recommended in writing by manufacturer before installation.
 - 2. During installation.
 - 3. Period recommended in writing by manufacturer after installation.
- B. Until Substantial Completion, maintain ambient temperatures in installation areas within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during static-control resilient flooring installation.
- D. Close spaces to traffic for period recommended in writing by manufacturer after static-control resilient flooring installation.
- E. Install static-control resilient flooring after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 STATIC-CONTROL, SOLID VINYL FLOOR TILE - RF-6

- A. Manufacturers: Subject to compliance with requirements, provide products indicated on Drawing by the following:
 - 1. Tarkett North America, or Architect approved equal by one of the following:
 - a. Armstrong World Industires, Inc.
 - b. Mannington Commercial
- B. Basis-of-Design Products: As indicated; refer to Finish Schedule on Drawings.
- C. Source Limitations: Obtain floor tile from single source from single manufacturer.
- D. Static-Control Properties: As determined by testing identical products in accordance with test method indicated by an independent testing and inspecting agency.
 - 1. Electrical Resistance:
 - a. Material: Point-to-point and point-to-ground resistances between 10^6 ohms and 10^9 ohms when tested in accordance with ASTM F150.
 - b. Material in Combination with a Person: Average resistance of 10^9 ohms when tested in accordance with ESD STM97.1.
 - 2. Static Generation:

- a. ESD STM97.2: Less than 100 V when tested at 12 percent relative humidity with static-control footwear.
- E. Critical Radiant Flux: 0.22 W/sq. cm or greater when tested in accordance with ASTM E648 or NFPA 253.
- F. Static Coefficient of Friction (ASTM D 2047): ≥ 0.5 SCOF
- G. Construction: ASTM F1700, Class I (monolithic), Type A (smooth surface).
- H. Thickness: Manufacturer's standard, but not less than 0.08 inch.
- I. Size: 24 by 24 inches.
- J. Seaming Method: Manufacturer's standard.
- K. Colors and Patterns: As indicated.
- L. Maintenance Floor Tiles: Special floor tiles inscribed "Conductive floor. Do not wax."
- M. Commercial Warranty: 20 year

2.2 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified portland cement or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Static-Control Adhesive: Provided or approved by manufacturer; type that maintains electrical continuity of floor-covering system to ground connection.
- C. Grounding Strips: Provided or approved by manufacturer; type and size that maintains electrical continuity of floor-covering system to ground connection.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for conditions affecting performance of the Work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with installation or static-control characteristics of floor coverings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates in accordance with manufacturer's written instructions and with oversight by manufacturer's representative to ensure successful installation of static-control resilient flooring and electrical continuity of floor-covering systems.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.

2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient tile flooring manufacturer. Do not use solvents.
 3. Moisture Testing: Proceed with installation only after substrates pass testing according to resilient tile flooring manufacturer's written recommendations, but not less stringent than the following:
 - a. Perform relative humidity test using in situ probes according to ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level.
 - b. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
 4. Alkalinity and Adhesion Testing: Perform tests recommended by resilient tile flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 7 or more than 9 pH unless more stringent is required by resilient flooring manufacturer.
 5. If tests exceed stated limits, apply approved moisture vapor emission control product complying with ASTM F-3010 in accordance with Section 090561.13 and allow to cure before installing resilient tile flooring.
 6. Submit test reports to Architect and flooring manufacturer.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install static-control resilient flooring until it is same temperature as space where it is to be installed.
1. Move static-control resilient flooring and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- E. Sweep and vacuum substrates to be covered by static-control resilient flooring immediately before installation.

3.3 INSTALLATION, GENERAL

- A. Install static-control resilient flooring in accordance with manufacturer's written instructions and with oversight by manufacturer's representative.
- B. Extend grounding strips beyond perimeter of static-control resilient floor-covering surfaces to ground connections.
1. For adhesively installed flooring, embed grounding strips in static-control adhesive.
- C. Scribe, cut, and fit static-control resilient flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
1. Extend static-control resilient flooring below built-in items and permanent, but movable, items that allow for a flexible layout where indicated on Drawings.
- D. Extend static-control resilient flooring into toe spaces, door reveals, closets, and similar openings.
- E. Extend static-control resilient flooring to center of door openings where flooring or color transitions occur.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on static-control resilient flooring as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.
- G. Install static-control resilient flooring on covers for telephone and electrical ducts, and similar items in installation areas. Maintain overall continuity of color and pattern with pieces of static-control resilient flooring installed on covers. Tightly adhere static-control resilient flooring edges to substrates that abut covers and to cover perimeters.

- H. Adhesive Installation: Adhere static-control resilient flooring to substrates using a full spread of static-control adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 INSTALLATION OF FLOOR TILE

- A. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so floor tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half floor tile at perimeter.
 - 1. Lay floor tiles in pattern indicated on Drawings.
- B. Match floor tiles for color and pattern by selecting floor tiles from cartons in same sequence as manufactured and packaged if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.
- C. In each space where conductive, solid vinyl floor tile is installed, install maintenance floor tile identifying conductive floor tile in locations approved by Architect.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: District will engage a qualified testing agency to test electrical resistance of static-control resilient flooring in accordance with ASTM F150 for compliance with requirements.
 - 1. Arrange for testing after the following:
 - a. Static-control adhesives have fully cured.
 - b. Static-control resilient flooring has stabilized to ambient conditions.
 - c. Ground connections are completed.
- B. Static-control resilient flooring will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of static-control resilient flooring.
- B. Perform the following operations immediately after completing static-control resilient flooring:
 - 1. Remove static-control adhesive from exposed surfaces.
 - 2. Remove dirt and blemishes from exposed surfaces.
 - 3. Sweep and vacuum surfaces thoroughly.
 - 4. Damp-mop surfaces to remove marks and soil.
- C. Protect static-control resilient flooring from marks, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
 - 1. Do not wax static-control resilient flooring.
 - 2. If recommended in writing by manufacturer, apply protective static-control floor polish formulated to maintain or enhance floor covering's electrical properties. Before polishing, do the following:
 - a. Ensure that static-control resilient flooring surfaces are free from soil, static-control adhesive, and surface blemishes.
 - b. Verify that both floor polish and its application method are approved by manufacturer and that floor polish will not leave an insulating film that reduces static-control resilient flooring's effectiveness for static control.
- D. Cover static-control resilient flooring and protect from rolling loads until Substantial Completion.

END OF SECTION 096536

SECTION 096723 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Resinous flooring. (RF-#)
 - 2. Integral cove base accessories.
- B. Related Sections:
 - 1. Section 071800 "Traffic Coatings" for elastomeric flooring systems.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review manufacturer's written instructions for substrate preparation and environmental conditions affecting resinous flooring installation.
 - 2. Review details of integral cove bases.
 - 3. Review manufacturer's written instructions for installing resinous flooring systems.
 - 4. Review protection measures for adjacent construction and installed flooring, floor drainage requirements, curbs, base details, and so forth.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's technical data, installation instructions, chemical-resistance information, and recommendations for each resinous flooring component required.
- B. Samples for Initial Selection: For each type of exposed finish required.
- C. Samples for Verification: For each resinous flooring system required and for each color and texture selected, 6 inches square, applied to a rigid backing by Installer for this Project.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For resinous flooring to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
 - 1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Apply full-thickness mockups on 96-inch- (2400-mm-) square floor area selected by Architect.
 - a. Include 96-inch (2400-mm) length of integral cove base with inside and outside corner as can be accomplished.
 - 2. Perform slip-resistance testing on mockup according to requirements in Field Quality Control Article. If flooring does not pass testing, remediate according to resinous flooring manufacturer's instructions until floors pass testing. Apply remediation procedures to final installation.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

C. Provide the following upon request:

1. Qualification Data: For Installer.
2. Material Certificates: For each resinous flooring component.
3. Material Test Reports: For each resinous flooring system, by a qualified testing agency.
4. Field quality-control reports.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring installation.
- B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring installation.
- C. Close spaces to traffic during resinous flooring installation and for 24 hours after installation unless manufacturer recommends a longer period.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. VOC Content of Liquid-Applied Resinous Coating Components: Not more than 100 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Flammability: Self-extinguishing in accordance with ASTM D635.
- D. Dynamic Coefficient of Friction: Provide resinous flooring with dynamic coefficient of friction indicated as determined by testing identical products per ANSI A137.1/A326.3 DCOF AcuTest procedure.
1. Dynamic Coefficient of Friction (DCOF):
 - a. Intermittently wet (Chemical Waste Storage): Not less than 0.42 wet.
 - b. Normally wet/slippery (Cadaver room) Not less than 0.50 wet.

2.2 RESINOUS FLOORING - RF-7

- A. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Crossfield Products Corp.; Dex-o-Tex (Basis-of-Design)

- b. Stonhard, Inc. (Stonclad GS/Stonkote HT4 and StonClad UR/Stonchem 800)
- 2. Basis-of-Design Product: Crossfield Products, Dex-o-Tex; Posi-Tred O, pigmented epoxy coating
- B. Components listed below are the basis of design intent; all substitutions will be compared to this standard including resin chemistry, color, wearing surface, thickness, number of coats, and installation procedures, Contractor shall comply with all the requirements of the Specifications and all of the components required by the Specifications, whether or not such products are specifically listed.
- C. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, from single source from single manufacturer. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.
- D. System Characteristics:
 - 1. Description: Two-component chemical-resistant pigmented epoxy with aluminum oxide broadcast over urethane slurry base coat.
 - 2. Color and Pattern: As indicated; refer to Finish Schedule on Drawings.
 - 3. Wearing Surface: Textured for slip resistance.
- E. Vapor Control Primer: Type recommended in writing by resinous flooring manufacturer for substrate and resinous flooring system indicated if required for moisture emission control.
- F. Waterproofing Membrane: Type recommended in writing by resinous flooring manufacturer for substrate and resinous flooring system indicated.
 - 1. Product: Dex-O-Tex Cheminert SC Membrane, unless otherwise recommended.
- G. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended in writing by manufacturer for installation indicated.
- H. Slurry-Applied Urethane Cement Composition Mortar:
 - 1. Basis of Design: Dex-O-Tex Tek-Crete SL-B by Crossfield Products.
 - a. Coats: 1 coat for total thickness of 5/16 inch.
- I. Topcoat: Chemical, heat, and skid-resistant epoxy coating for application over prepared concrete.
 - 1. Basis of Design: Dex-O-Tex Posi-Tred O by Crossfield Products.
 - 2. Coats: 2 coats with dry film thickness not less than 10 mils per coat.
 - 3. Physical Properties:
 - a. Solids: 100 percent
 - b. Tensile Strength (ASTM C307): Not less than 1,200 psi.
 - c. Surface Hardness (ASTM D2240) 75-80 Durometer "D".
 - d. Resistance to Fungal Growth (ASTM G21): Passes, Rating 1, with additive.
 - e. VOC: Less than 5 g/L

2.3 ACCESSORIES

- A. Precast, Integral Cove Base: Contractor's option in lieu of field-formed cove bases. Impact-resistant, polymer-resin, cove base moldings with a grit profile to promote adhesion of resinous flooring and recommended in writing by resinous flooring manufacturer.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. SpeedCove, Inc., or equal as recommended by resinous flooring manufacturer.
 - 2. Radius Cove: Cove molding with approximately 1-inch (25-mm) radius for adhesive installation at floor-to-wall joint as substrate to receive resinous flooring system to form an integral cove base.

3. Radius Cove Base: Cove base molding that provides approximately 1-inch (25-mm) radius cove at floor-to-wall joint; for adhesive installation as substrate for resinous flooring system to form an integral cove base.
 - a. Preformed Inside and Outside Corners: Provide manufacturer's standard square inside and square outside corners.
- B. Installation Adhesive: As recommended in writing by accessory manufacturer.
 1. Adhesives: Do not use adhesives that contain urea formaldehyde.
 2. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Sealant: Manufacturer's recommended or produced by resinous flooring manufacturer for type of service and joint conditions indicated or required.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements of ACI 311.4R for conditions affecting performance of the Work.
 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resinous flooring systems.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare and clean substrates in accordance with resinous flooring manufacturer's written instructions for substrate indicated to ensure adhesion.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
 1. Roughen concrete substrates as follows:
 - a. Shot-blast or diamond-grind surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot and dust by vacuum pickup.
 - b. Comply with requirements in SSPC-SP 13/NACE No. 6, with a Concrete Surface Profile of 3 or greater in accordance with ICRI Technical Guideline No. 310.2R, unless manufacturer's written instructions are more stringent.
 2. Remove sufficient material to provide a sound surface, free of laitance, glaze, efflorescence, and any bond-inhibiting curing compounds or form release agents. Remove grease, oil, and other penetrating contaminants. Repair damaged and deteriorated concrete in accordance with resinous flooring manufacturer's written instructions. Leave surface free of dust, dirt, laitance, and efflorescence.
 3. Repair damaged and deteriorated concrete in accordance with ACI 546.R and resinous flooring manufacturer's written instructions.
 4. Moisture Testing: (304.8 sq. m) Perform no fewer than two tests in each installation area and with test areas evenly spaced in installation areas. Perform the following tests required by manufacturer:

- a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 5. Moisture vapor emission rates (MVER) in excess of either 3 lbs./1000 sq/ft/per 24 hr. period per ASTM F1869, or an RH in excess of 75%% per ASTM F2170 requires the application of Vapor Control Primers as instructed by manufacturer.
 6. Perform additional moisture tests recommended by manufacturer. When required, apply vapor control primer according to procedures as instructed by resinous flooring manufacturer. Proceed with application only after substrates pass testing.
- C. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates in accordance with manufacturer's written instructions. Verify the substrate has proper levelness and flatness, and slope for drainage.
1. Control Joint Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring in accordance with manufacturer's written instructions.
- D. Resinous Materials: Mix components and prepare materials in accordance with resinous flooring manufacturer's written instructions.
- E. Pre-Manufactured Integral Cove Base Accessories: Adhesively install precast accessories before applying flooring coats and in accordance with manufacturer's written instructions.
1. Integral Cove Base: 6 inches (100 mm) high, unless otherwise indicated.
- F. Field-Formed Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring coats. Apply in accordance with manufacturer's written instructions and details, including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
1. Integral Cove Base: 6 inches high, unless otherwise indicated.
- G. Waterproofing Membrane: Apply Membrane in a 40 mil "neat" coat and allow to cure overnight. Apply a second 10 mil coat and broadcast with sand to rejection. Allow to cure.
1. Sweep off the surface and apply the urethane slurry basecoat directly to the broadcast surface.
 2. Verify proper surface profile per ICRI 310.25 CSP coupons. Perform water break test and tape dust cleanliness test per ISO 8502-3 to determine surface is acceptable to proceed.
 3. Apply waterproofing membrane to integral cove base substrates.

3.3 INSTALLATION

- A. Apply components of resinous flooring system in accordance with manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness specified.
1. Coordinate installation of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
 2. Cure resinous flooring components in accordance with manufacturer's written instructions. Prevent contamination during installation and curing processes.
 3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.
 4. Contractor shall keep daily logs recording the work performed and environmental conditions as required by the materials manufacturer.
- B. Self-Leveling Body Coats: Apply self-leveling slurry body coats in thickness specified for flooring system.

- C. Topcoats: Apply topcoats in number of coats indicated for flooring system specified, to produce finish matching approved submittal sample, and at spreading rates recommended in writing by manufacturer, and to produce wearing surface specified.
 - 1. Aggregates: Broadcast aggregates at rate recommended in writing by manufacturer. After resin is cured, remove excess aggregates to provide surface texture indicated.

3.4 TERMINATIONS

- A. Chase edges to "lock" the flooring system into the concrete substrate along lines of termination.
- B. Penetration Treatment: Lap and seal the flooring system onto the perimeter of the penetrating item by bridging over compatible elastomer at the interface to compensate for possible movement.

3.5 JOINTS AND CRACKS

- A. Treat control joints to bridge potential cracks and to maintain monolithic protection.
- B. Treat cold joints and construction joints to bridge potential cracks and to maintain monolithic protection on horizontal and vertical surfaces as well as horizontal and vertical interfaces.
- C. Discontinue floor coating system at vertical and horizontal contraction and expansion joints by installing backer rod and compatible sealant after coating installation is completed. Provide sealant type recommended by manufacturer for traffic conditions and chemical exposures to be encountered.

3.6 FIELD QUALITY CONTROL

- A. Slip Resistance: Engage special testing agency to perform the following tests.
 - 1. Dynamic Coefficient of Friction (DCOF): A reading of not less than indicated for each wet/dry area indicated in Performance Requirements above shall be achieved and documented, as determined by a certified NFSI walkway auditor using the ANSI A137.1/A326.3 quality control test using a recognized tribometer.
 - a. Test once in each installation area under conditions indicated.
 - 2. Prepare test reports. Submit to Architect upon request.
- B. Material Sampling: University may, at University's discretion, at any time and any number of times during resinous flooring installation, require material samples for testing for compliance with requirements.
 - 1. University may engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.
 - 2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
 - 3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reinstall flooring materials to comply with requirements.
- C. Core Sampling: At University's direction and at locations designated by University, take one core sample in each installation area, to verify thickness. For each sample that fails to comply with requirements, take two additional samples. Repair damage caused by coring. Correct deficiencies in installed flooring as indicated by testing.

3.7 CURING AND PROTECTION

- A. Cure resinous flooring materials according to manufacturer's directions, taking care to prevent contamination during application stages and before completing curing process. Close application area for a minimum of 24 hours.
- B. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

END OF SECTION 096723

SECTION 096813 - TILE CARPETING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes modular carpet tile.
- B. Related Requirements:
 - 1. Section 090561.13 "Moisture Vapor Emission Control" for remediation of concrete floors that exceed moisture vapor limitations.
 - 2. Section 096513 "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet tile.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
 - 2. Include manufacturer's written installation recommendations for each type of substrate.
- B. Sustainable Product Certification: Provide ANSI/NSF 140 certification for carpet products. Not required for basis-of-design products.
- C. Shop Drawings: For carpet tile installation, plans showing the following:
 - 1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
 - 2. Carpet tile type, color, and dye lot.
 - 3. Type of subfloor.
 - 4. Type of installation.
 - 5. Pattern of installation.
 - 6. Pattern type, location, and direction.
 - 7. Pile direction.
 - 8. Type, color, and location of insets and borders.
 - 9. Type, color, and location of edge, transition, and other accessory strips.
 - 10. Transition details to other flooring materials.
- D. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
 - 1. Carpet Tile: Full-size Sample.
 - 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch- long Samples.
- E. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

1.3 INFORMATIONAL SUBMITTALS

- A. Certification: Signed by manufacturer and installer that subfloors meet or exceed requirements of product installation for moisture content and alkalinity.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
 - 1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.

2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd..

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association at the Commercial II certification level.
- B. Provide the following upon request:
 1. Qualification Data: For Installer.
 2. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.
- C. Mockups: Build in-place mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 1. Build mockups for carpet tile including resilient base and accessories.
 - a. Size: Minimum 100 sq. ft. for each type, color and pattern in locations directed by Architect.
 2. Obtain Architect's approval for each product before proceeding with remaining Work of this Section.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Comply with CRI's "CRI Carpet Installation Standard."

1.8 FIELD CONDITIONS

- A. Comply with CRI's "CRI Carpet Installation Standard" for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.
- C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.
- D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements:
 1. CBC 804.3 - Testing and Identifications:

- a. Carpeting shall be tested by an agency in accordance with ASTM E648 or NFPA 253 and identified by a hang tag or other suitable method so as to identify the manufacturer or supplier and style, and shall indicate the carpet classification in accordance with CBC Section 804.2. Carpeting shall be tested as proposed for use. Test reports confirming the information provided in the manufacturer's product identification shall be furnished to the submitted upon request.
2. CBC 804.4.1 - Test Requirements:
 - a. Carpeting shall comply with the requirements of ASTM E648, and shall have a specific optical density smoke rating not to exceed 450 per ASTM E662.
- B. Fire-Test-Response Characteristics: As determined by testing identical carpeting applied with identical adhesives to substrates in accordance with test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
- C. Stain Resistance: Stain resistance properties shall be inherent. Topical Stain resistance treatment will not be acceptable. Stain Resistance properties shall be permanent and cannot be removed by commercial cleaning or abrasive wear and shall pass the AATCC 175 red dye 40 tests. Carpet is required to retain permanent stain protection against acid type spills for the life of the carpet as measured by General Services Administration (GSA) test for permanence SIN 31-8.
- D. Edge Ravel: Limited lifetime Warranty against Edge Ravel. Preference will be given to carpet manufacturers that do not require the edges of the carpet to be seam sealed to guarantee 20 years of edge unraveling.
- E. Tuft Bind: Wet: Limited Lifetime Warranty against zippering
- F. Color fastness-light/color: Carpet is required to resist color loss from light exposure for 10 years. Manufacturer is required to provide a 10-year warranty for colorfastness after exposure to light as measured by AATCC Test Method 16E- International Gray scale rating after 160 AFU's should be 4 or better.
- G. Colorfastness-ozone: Carpet will resist color loss from Atmospheric Contamination for 10 years. Carpet manufacturer is required to provide a 10-year warranty for colorfastness after exposure to atmospheric contaminates as measured by AATCC Test Method 129- Ozone minimum shade change rating after five cycles shall be no less than International Gray scale rating of 4 or better.
- H. Colorfastness-crocking: Rating shall be 4 or better (wet and dry) AATCC transference scale AATCC 165.
- I. Carpet is required to resist color transfer from wear for the life of the carpet. Carpet shall exhibit permanent colorfastness (wet or dry) for the lifetime of the installation as measured by AATCC Test method 8, minimum stain rating of 4 or better compared to AATCC color transference scale.
- J. The carpet shall exhibit permanent wetfastness for the lifetime of the installation as measured by AATCC Test Method 107, minimum shade change should be no less than International Gray Scale rating of 4 or better. water: 4 or better AATCC transference scale AATCC 107.
- K. Performance Characteristics: In addition, warrant the carpeting for a period of 10 years for the following:
 1. Appearance Retention Rating: Severe traffic, 3.5 minimum according to ASTM D 7330.
 2. Critical Radiant Flux Classification: Not less than 0.22 W/sq. cm according to NFPA 253.
 3. Delamination: Not less than 3.5 lbf/in. according to ASTM D 3936.

4. Dimensional Tolerance: Within 1/32 inch of specified size dimensions, as determined by physical measurement.
5. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
6. Electrostatic Propensity: Less than 3.5 kV according to AATCC 134.

2.2 CARPET TILE

- A. Basis-of-Design Products: As indicated; refer to Finish Schedule on Drawings.
- B. Acceptable Manufacturers: Subject to compliance with requirements, provide product listed on Drawings by the following:
 1. Tarkett, or Architect approved equal by one of the following:
 - a. Interface, Inc.
 - b. Mohawk Carpet, LLC; The Mohawk Group.
- C. Primary Backing/Backcoating: Manufacturer's standard composite materials.
- D. Secondary Backing: Manufacturer's standard material.
- E. Size: As indicated on Drawings.
- F. Applied Treatments:
 1. Stain-Resistance Treatment: Manufacturer's standard permanent treatment meeting Performance Requirements above.
 2. Antimicrobial Treatment: Manufacturer's standard treatment that protects carpet tiles as follows:
 - a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
- G. Sustainable Design Requirements:
 1. Sustainable Product Certification: Gold level certification according to ANSI/NSF 140.

2.3 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.
- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requirements for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation.
 1. Adhesives shall have a VOC content of 50 g/L or less.
 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Metal Edge Strips: Extruded aluminum with finish as selected by Architect, of width shown, of height required to protect exposed edges of flooring, and in maximum available lengths to minimize running joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance.
- B. Examine carpet tile for type, color, pattern, and potential defects.
- C. Concrete Slabs: Verify that finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient sheet flooring manufacturer. Do not use solvents.
 - 3. Moisture Testing: Proceed with installation only after substrates pass testing according to carpet tile manufacturer's written recommendations, but not less stringent than the following so that each test area does not exceed 1000 sq. ft but perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas
 - a. Relative Humidity Test: Using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 - b. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
 - 4. If tests exceed stated limits, apply approved moisture vapor emission control product complying with ASTM F-3010 in accordance with Section 090561.13 and allow to cure before installing carpet tile.
- D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by carpet tile.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Comply with CRI's "Carpet Installation Standards" and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider, and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.
- C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.
- D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

- A. General: Comply with CRI's "CRI Carpet Installation Standard," Section 18, "Modular Carpet" and with carpet tile manufacturer's written installation instructions.
- B. Installation Method: As recommended in writing by carpet tile manufacturer.
- C. Maintain dye-lot integrity. Do not mix dye lots in same area.
- D. Maintain pile-direction patterns recommended in writing by carpet tile manufacturer.
- E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.

3.4 CLEANING AND PROTECTION

- A. Perform the following operations immediately after installing carpet tile:
 - 1. Remove excess adhesive and other surface blemishes using cleaner recommended by carpet tile manufacturer.
 - 2. Remove yarns that protrude from carpet tile surface.
 - 3. Vacuum carpet tile using commercial machine with face-beater element.
- B. Protect installed carpet tile to comply with CRI's "Carpet Installation Standard," Section 20, "Protecting Indoor Installations."
- C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

SECTION 097200 - WALL COVERINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Non-vinyl wall covering.
 - 2. Textile wall covering.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. LEED Submittals in accordance with Section 018113 "Sustainable Design Requirements" applicable to this Section may include the following:
 - 1. Product Data: For adhesives, indicating VOC content.
 - 2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 3. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: Show location and extent of each wall-covering type. Indicate pattern placement, seams, and termination points.
- D. Samples: For each type of wall covering and for each color, pattern, texture, and finish specified.
- E. Custom Graphics: For each custom graphic wall covering, provide drawings showing graphic elements and layout based on digital graphics provided by Architect.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates in accordance with test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 - 2. Fire-Growth Contribution: No flashover and heat and smoke release when tested in accordance with NFPA 265.

2.2 NON-VINYL WALL COVERINGS

- A. Basis-of-Design Product: As indicated; refer to Finish Schedule on Drawings.
- B. Description: Provide digitally printed custom PVC-free products in rolls from same production run and complying with the following:
 - 1. FS CCC-W-408D for Type II, Medium Duty.
- C. Total Weight: 18 oz/ lin yd, excluding coatings.
- D. Content: 10% Polyester, 40% Latex, 50% Cellulose
- E. Width: 50 inches.
- F. Backing: Cotton, Polyester Scrim fabric.
- G. Mildew Resistance: Rating of zero or 1 when tested in accordance with ASTM G21.
- H. Colors, Textures, and Patterns: Custom digital graphics. Graphics provided by Architect.

2.3 TEXTILE WALL COVERING

- A. Basis-of-Design Product: As indicated; refer to Finish Schedule on Drawings.
- B. Description: Provide wall coverings in rolls from same production run and that comply with the following:
 - 1. Fabric Type: Non-Woven
 - 2. FS CCC-W-408D for Type II, Medium Duty.
 - 3. Weight: 20 oz / lin yd
- C. Test Responses:
 - 1. Colorfastness to Wet and Dry Crocking: Complies with AATCC 8, Grade 3, minimum.
 - 2. Colorfastness to Light: Complies with AATCC 16.2 Test Option 1 or AATCC 16.3 Test Option 3, Class L4, minimum, at 40 hours.
 - 3. Mildew Resistance: Rating of zero or 1 when tested in accordance with ASTM G21.
- D. Width: 54 inches.
- E. Backing Fabric Weight: 1.8 oz/sq.yd
- F. Features:
 - 1. Stain-Resistant Coating: Manufacturer's standard.
 - 2. Strippable.
 - 3. Antimicrobial.
 - 4. Water-based inks.
- G. Colors, Textures, and Patterns: As indicated on Drawings.

2.4 ACCESSORIES

- A. Adhesive: Mildew-resistant, nonstaining, strippable adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.
 - 1. Adhesives shall have a VOC content of 50 g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Primer/Sealer: Mildew resistant, complying with requirements in Section 099123 "Interior Painting" and recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, and mildew.
- C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
 1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
 2. Gypsum Board: Apply primer/sealer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
- D. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.
- E. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

3.2 INSTALLATION OF WALL COVERING

- A. Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated.
- B. Cut wall-covering strips in roll number sequence. Change the roll numbers at partition breaks and corners.
- C. Install strips in same order as cut from roll.
 1. For solid-color, even-texture, or random-match wall coverings, reverse every other strip.
- D. Install wall covering without lifted or curling edges and without visible shrinkage.
- E. Match pattern 72 inches above the finish floor.
- F. Install seams vertical and plumb at least 6 inches from outside corners and 6 inches from inside corners unless a change of pattern or color exists at corner. Horizontal seams are not permitted.
- G. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without overlaps or gaps between strips.
- H. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.
- I. Remove excess adhesive at seams, perimeter edges, and adjacent surfaces.
- J. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION

SECTION 097723 - FABRIC-WRAPPED PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes shop-fabricated, fabric-wrapped wall panels (AP-#).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include fabric facing, panel edge, core material, and mounting indicated.
- B. Shop Drawings: For panel assembly and installation.
 - 1. Include plans, elevations, sections, and mounting devices and details.
 - 2. Include details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge profile and core materials.
 - 3. Include details at cutouts and penetrations for other work.
 - 4. Include direction of fabric weave and pattern matching.
- C. Samples for Verification: For the following products:
 - 1. Fabric: Full-width by approximately 36-inch- long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
 - 2. Panel Edge: 12-inch- long Sample(s) showing each edge profile, corner, and finish.
 - 3. Core Material: 12-inch- square Sample at corner.
 - 4. Assembled Panels: Approximately 36 by 36 inches, including joints and mounting methods.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of panel to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal instructions.

1.4 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Product Certificates: For each type of panel.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Comply with fabric and panel manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and panels in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.6 FIELD CONDITIONS

- A. Environmental Limitations: Do not install panels until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Air-Quality Limitations: Protect panels from exposure to airborne odors such as tobacco smoke, and install panels under conditions free from odor contamination of ambient air.

- C. Field Measurements: Verify panel locations and actual dimensions of openings and penetrations by field measurements before fabrication, and indicate them on Shop Drawings.

1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace panels and components that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Fabric sagging, distorting, or releasing from panel edge.
 - b. Warping of core.
 - 2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Panels shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.

2.2 FABRIC-WRAPPED WALL PANELS

- A. Fabric-Wrapped Wall Panel, AP-3 and AP-4: Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back edge border of core stretched over front face of edge-framed core and bonded or attached to edges and back of frame Insert description.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Conwed.
 - b. Decoustics Limited; a Saint Gobain company.
 - c. Golterman & Sabo.
 - d. Panel Solutions, Inc.
 - e. Pinta Acoustic, Inc.
 - 2. Basis-of-Design Product: As indicated; refer to Finish Schedule on Drawings.
 - 3. Panel Shape: Flat.
 - 4. Mounting:
 - a. Back mounted with manufacturer's standard hook and loop strips, secured to substrate.
 - 5. Core: Manufacturer's standard.
 - 6. Edge Construction: Manufacturer's standard chemically hardened core with no frame.
 - 7. Edge Profile: Chamfered (beveled).
 - 8. Corner Detail in Elevation: Square with continuous edge profile indicated.
 - 9. Facing Material: As indicated on Drawings.
 - 10. Nominal Core Thickness: As indicated on Drawings.
 - 11. Panel Width: As indicated on Drawings.
 - 12. Panel Height: As indicated on Drawings.

2.3 MATERIALS

- A. Core Materials: Manufacturer's standard.
 - 1. Glass-Fiber Board: ASTM C612; of type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft., unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
- B. Facing Material : Fabric from same dye lot; color and pattern as indicated on Drawings.
 - 1. Applied Treatments: Stain resistance, flame-retardant.
- C. Mounting Devices: Concealed on back of panel, recommended by manufacturer to support weight of panel, and as follows:
 - 1. Hook-and-Loop Strips: Manufacturer's standard.

2.4 FABRICATION

- A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
- B. Edge Hardening: For glass-fiber board cores, chemically harden core edges and areas of core where mounting devices are attached.
- C. Facing Material: Apply fabric fully covering visible surfaces of panel; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
 - 1. Square Corners: Tailor corners.
 - 2. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent panels.
- D. Dimensional Tolerances of Finished Panels: Plus or minus 1/16 inch for the following:
 - 1. Thickness.
 - 2. Edge straightness.
 - 3. Overall length and width.
 - 4. Squareness from corner to corner.
 - 5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fabric, fabricated panels, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting panel performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install panels in locations indicated. Unless otherwise indicated, install panels with vertical surfaces and edges plumb, top edges level and in alignment with other panels, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

- B. Comply with manufacturer's written instructions for installation of panels using type of mounting devices indicated. Mount panels securely to supporting substrate.
- C. Align fabric pattern and grain with adjacent panels.

3.3 INSTALLATION TOLERANCES

- A. Variation from Plumb and Level: Plus or minus 1/16 inch in 48 inches, noncumulative.
- B. Variation of Joint Width: Not more than 1/16 inch wide from hairline in 48 inches, noncumulative.

3.4 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 097723

SECTION 098100 - ACOUSTICAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Acoustical batt insulation in sound rated partitions.
 - 2. Acoustical batt insulation above suspended ceilings.
- B. Related Requirements:
 - 1. Section 079219 "Acoustical Joint Sealants" for joint sealants and electrical box putty pads used in sound-rated partitions and ceilings.

1.2 ACTION SUBMITTALS

- A. Product Data: Provide data on product characteristics, performance criteria, and product limitations.
- B. Manufacturer's Installation Instructions: Include information on special environmental conditions required for installation and installation techniques.
- C. LEED Submittals in accordance with Section 018113 "Sustainable Design Requirements" applicable to this Section may include the following:
 - 1. Product Data: For adhesives, indicating VOC content.
 - 2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 3. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.

1.3 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.
 - 2. Manufacturer's Certificate: Certify that products meet or exceed specified requirements, and that products contain no asbestos.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to the Project site in their original containers or packages or bundles bearing label clearly identifying manufacturer's name, brand, grade, UL listing, and other pertinent information.
- B. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

1.5 FIELD CONDITIONS

- A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame Spread Index: 25 or less.
 2. Smoke Developed Index: 450 or less.

2.2 ACOUSTICAL INSULATION MATERIALS

- A. Batt Insulation - Walls: ASTM C 665, Type I; preformed batt; friction fit, for interior walls, conforming to the following:
1. Material: Inorganic Glass Fiber
 2. Fire Resistance:
 - a. Flame Spread Index: 25 or less, when tested in accordance with ASTM E 84.
 - b. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E 84.
 3. Acoustical Performance: 3.5 inch thickness, minimum.
 4. Facing: Unfaced.
 5. Manufacturers:
 - a. CertainTeed Corporation; CertaPro AcoustaTherm s: www.certainteed.com.
 - b. Johns Manville Corporation; Sound Control Batts: www.jm.com.
 - c. Knauf Insulation; QueitTherm QT: www.knaufinsulation.us.
 - d. Owens Corning Corp; EcoTouch Sound Attenuation Batts: www.owenscorning.com
- B. Batt Insulation - Ceilings: ASTM C 665, Type I; preformed batt; above lay-in suspended ceilings, conforming to the following:
1. Material: Inorganic Glass Fiber
 2. Fire Resistance:
 - a. Flame Spread Index: 25 or less, when tested in accordance with ASTM E 84.
 - b. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E 84.
 3. Thickness: 3.5 inches, as indicated.
 4. Size: 24 inches by 48 inches or 24 inch wide by roll length.
 5. Facing: Unfaced.
 6. Manufacturers:
 - a. CertainTeed Corporation; CertaPro AcoustaTherm: www.certainteed.com.
 - b. Johns Manville Corporation; Sound Control Batts: www.jm.com.
 - c. Knauf Insulation; QueitTherm QT: www.knaufinsulation.us.
 - d. Owens Corning Corp; EcoTouch Sonobatts Insulation: www.owenscorning.com

2.3 ACCESSORIES

- A. Insulation Fasteners: Impaling pins/clips of galvanized steel with washer retainer and clips, to be mechanically fastened to surface to receive insulation, length to suit insulation thickness and substrate, capable of securely and rigidly fastening insulation in place. Refer to Section 072100 "Thermal Insulation" for products as applicable.
- B. Wire Mesh: Galvanized steel, hexagonal wire mesh.

- C. Adhesives - General: Compatible with materials being adhered as instructed by insulation manufacturer for application; maximum VOC content of 50 g/L; GreenSeal GS-36 certified; in lieu of labeled product, independent test report showing compliance is acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that substrate, adjacent materials, and insulation materials are dry and that substrates are ready to receive insulation and adhesive.
- B. Verify substrate surfaces are flat, free of honeycomb, fins, irregularities, or materials or substances that may impede adhesive bond.

3.2 INSTALLATION OF INSULATION IN WALLS FOR SOUND ATTENUATION

- A. Install insulation in accordance with manufacturer's instructions.
- B. Install in interior wall and furring spaces without gaps or voids. Do not compress insulation.
- C. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.
- D. Friction fit insulation tightly in cavities and tightly to exterior side of mechanical and electrical services within the plane of the insulation. Insulation shall be tight within spaces in partitions, around cut openings, behind and around electrical and mechanical items within or behind partitions and tight to items passing through partitions.
- E. For applications where the wall is not finished on both sides or insulation does not fill the cavity, supplementary support of the insulation such as wire or insulation impaling pins shall be provided to hold the insulation in place.
- F. Install blankets full height of wall.
 - 1. Where acoustical blankets are indicated for sound attenuation above ceilings separated by full-height partitions, extend acoustical blankets in wall cavity to roof/floor deck above. Install gypsum board on one or both sides of metal studs above ceiling as indicated.
 - 2. Where partition terminates at, or just above, ceiling, install acoustical blankets full height of wall in wall cavity and install blankets loose laid on ceiling as indicated below.
- G. Tape seal butt ends, lapped flanges, and tears or cuts in membrane.

3.3 INSTALLATION OF INSULATION ABOVE CEILINGS FOR SOUND ATTENUATION

- A. Where acoustical blankets are indicated for sound attenuation above ceilings separated by full-height partitions, install blanket insulation over entire ceiling area in thicknesses indicated. Fit insulation tightly above ceiling, loose laid. Tightly fit around hangers, fixtures and other penetrating devices.
- B. Where acoustical blankets are indicated for sound attenuation above suspended ceilings with partition terminating below ceiling, fit insulation tightly above ceiling, loose laid. Refer to the suspended ceiling manufacturer's recommendations to ensure proper installation. Extend insulation 48 inches to both sides of partition above ceiling. Tightly fit around hangers, fixtures and other penetrating devices.
- C. For insulation mounted to side of gypsum board or other solid wall surface above ceiling, install adhesive-mounted impaling pins with metal caps at 24 inches vertically and at 4 inches from each side of blankets horizontally. Install blankets with 48 inch dimension running vertically on spikes, keeping blankets tight to exterior wall without crushing into each other.

3.4 PROTECTION

- A. Protect installed insulation from damage due to physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 098433 - SOUND-ABSORBING WALL UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes shop-fabricated, acoustical panel units tested for acoustical performance, including the following:
 - 1. Sound-absorbing felt wall panels. (AP-#)

1.2 DEFINITIONS

- A. NRC: Noise Reduction Coefficient.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 - 2. Environmental Product Declaration (EPD): For each product.
 - 3. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
 - 4. Chain-of-Custody Qualification Data: For manufacturer and vendor.
 - 5. Product Data: For adhesives, indicating VOC content.
 - 6. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 7. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
 - 8. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.
- C. Samples for Verification: For the following products:
 - 1. Fabric: 8 inch square Sample.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of unit to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal instructions.

1.5 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Product Certificates: For each type of unit.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Comply with fabric and unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Do not install units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Air-Quality Limitations: Protect units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.
- C. Field Measurements: Verify unit locations and actual dimensions of openings and penetrations by field measurements before fabrication, and indicate them on Shop Drawings.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace units and components that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Acoustical performance.
 - b. Panel sagging, distorting, or warping.
 - 2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Verify wall materials comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 - 2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

2.2 SOUND-ABSORBING WALL UNITS

- A. Sound-Absorbing Wall Panel, AP-1 and AP-2: Manufacturer's standard solid felt panel construction.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Acoufelt
 - b. Autex
 - c. Slalom
 - 2. Basis-of-Design Product: Autex Cube, as indicated on Drawings.
 - a. Panel Shape: Flat.
 - b. Thickness: As indicated.

- c. Colors: As indicated; refer to Finish Schedule on Drawings.
- 3. Mounting: Manufacturer's recommended adhesive or double-sided tape, secured to substrate.
- 4. Acoustical Performance: Sound absorption NRC of not less than 020.

2.3 METAL EDGE STRIPS

- A. Metal Edge Strips: Metal edge protection of width shown, of height required to protect exposed edges of wall panels, and maximum available lengths to minimize running joints; finish and color as indicated.
 - 1. Basis of Design Manufacturers: Subject to compliance with requirements, provide basis-of-design shapes indicated as manufactured by the following:
 - a. Schluter Systems, LP, or comparable by one of the following:
 - 1) Blanke Corporation.
 - 2) Progress Profiles.
 - 2. Basis-of-Design Products: Style and sizes as indicated on Drawings.

2.4 FABRICATION

- A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with rigid edges to reinforce panel perimeter against warpage and damage.
- B. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for the following:
 - 1. Thickness.
 - 2. Edge straightness.
 - 3. Overall length and width.
 - 4. Squareness from corner to corner.
 - 5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install units in locations indicated. Unless otherwise indicated, install units with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with manufacturer's written instructions for installation of units using type of mounting indicated. Mount units securely to supporting substrate.

3.3 INSTALLATION TOLERANCES

- A. Variation from Plumb and Level: Plus or minus 1/16 inch in 48 inches, noncumulative.
- B. Variation of Joint Width: Not more than 1/16-inch variation from hairline in 48 inches, noncumulative.

3.4 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION

SECTION 099113 - EXTERIOR PAINTING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes surface preparation and the application of paint systems on exterior substrates.
- B. Related Requirements:
 - 1. Section 051200 "Structural Steel Framing" for shop primer used on exposed structural steel.

1.2 DEFINITIONS

- A. MPI Gloss Level 1 (Matte or Flat Finish): Not more than five units at 60 degrees and 10 units at 85 degrees, according to ASTM D 523.
- B. MPI Gloss Level 5 (Semi-Gloss Finish): 35 to 70 units at 60 degrees, according to ASTM D 523.
- C. MPI Gloss Level 6 (Gloss Finish): 70 to 85 units at 60 degrees, according to ASTM D 523.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
- B. Samples for Verification: For each type of paint system and each color and gloss of topcoat.
 - 1. Submit Samples on rigid backing, 8 inches square.
 - 2. Apply coats on Samples in steps to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.
- C. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.4 CLOSEOUT SUBMITTALS

- A. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.
- B. Submit two painted samples, 6 inches by 6 inches illustrating each color and system used on the Project.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Paint: 5 percent, but not less than 2 gal. of each material and color applied.

1.6 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
 - b. Other Items: Architect will designate items or areas required.
2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to University.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
 1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain products from a single manufacturer.
- B. Manufacturers: Provide colors, gloss and finish indicated on Drawings either by manufacturer indicated, or equal matching color by one of the following to the acceptance of the Architect:
 1. Benjamin Moore & Co. (Basis-of-Design)
 2. Dunn Edwards.
 3. PPG Paints
 4. Sherwin-Williams Company (The).
- C. Provide products indicated in Exterior Painting Schedule at the end of this Section as manufactured by Benjamin Moore, or provide MPI-listed equivalent products from listed manufacturer's premium or professional product line.
 1. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."
- D. Colors: Colors indicated on Drawings are by Benjamin Moore. Color matching by other listed manufacturer is acceptable.

2.2 PAINT, GENERAL

- A. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 1. Concrete: 12 percent.
- C. Portland Cement Plaster Substrates: Verify that plaster is fully cured.
- D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
- E. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer.
- F. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- G. Plastic Trim Fabrication Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed items with prime coat only.
 - 3. Paint both sides and edges of exterior doors and entire exposed surface of exterior door frames.
 - 4. Paint entire exposed surface of window frames and sashes.
 - 5. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 6. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. Tint undercoats same color as topcoat, but tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
 - 1. Paint the following work where exposed to view:
 - a. Equipment, including panelboards and switch gear.
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.
 - g. Tanks that do not have factory-applied final finishes.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: University may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
 - 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 - 2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 EXTERIOR PAINTING SCHEDULE

A. Concrete Substrates, Nontraffic Surfaces:

1. Latex System **MPI EXT 3.1A:**

- a. Prime Coat: Primer, alkali resistant, water based, MPI #3.
 - 1) Benjamin Moore Ultra Spec Masonry Interior/Exterior 100% Acrylic Sealer #608
- b. Prime Coat, Latex: Exterior, matching topcoat.
- c. Intermediate Coat: Latex, exterior, matching topcoat.
- d. Flat Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.
 - 1) Benjamin Moore Aura Waterborne Exterior Flat #N629.
 - a) Film Thickness (per coat): 2.1 to 2.9 mils DFT (Not less than 4.6 mils wet)

B. Steel and Iron Substrates:

1. Water-Based Light Industrial Coating System MPI EXT 5.1B:

- a. Shop Prime Coat: Shop primer specified in Section where substrate is specified.
- b. Prime Coat: If shop primer is not compatible with topcoats and additional primer is required over shop primer or for touch up of shop primer, provide additional coat of zinc-rich epoxy primer or DTM topcoat as recommended by topcoat manufacturer.
- c. Intermediate Coat: Light industrial coating, exterior, water based, matching topcoat.
- d. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.
 - 1) Benjamin Moore Ultra Spec HP DTM Acrylic Semi-Gloss #HP29
 - a) Film Thickness (per coat): Not less than 2.3 mils DFT (Not less than 5.0 mils wet)

C. Galvanized-Metal Substrates (Bonderized, including flashings and sheet metal, unless otherwise indicated):

1. Water-Based Light Industrial Coating System MPI EXT 5.3K:

- a. Prep: Clean with oil and grease emulsifier as recommended by topcoat manufacturer.
 - 1) Benjamin Moore Oil & Grease Emulsifier Corotech V600
- b. First Coat: Light industrial coating, exterior, water based, matching topcoat.
- c. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.
 - 1) Benjamin Moore Ultra Spec HP DTM Acrylic Semi-Gloss #HP29
 - a) Film Thickness (per coat): Not less than 2.3 mils DFT (Not less than 5.0 mils wet)

- 2. For high-performance epoxy and urethane coatings on exterior steel railings, and exterior metallic-coated hollow metal doors and frames, refer to Section 099600 "High-Performance Coatings."

D. Galvanized Steel (Nonbonderized):

1. Water-Based Light Industrial Coating System: MPI EXT 5.3K (Modified)
 - a. Bonding Primer: Waterborne bonding primer over properly cleaned and prepared galvanized metal as instructed by primer manufacturer.
 - 1) Benjamin Moore Stix Waterborne Bonding Primer #SXA-110
 - b. First Coat: Light industrial coating, exterior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.
 - 1) Benjamin Moore Ultra Spec HP DTM Acrylic Semi-Gloss #HP29
 - a) Film Thickness (per coat): Not less than 2.3 mils DFT (Not less than 5.0 mils wet)

E. Aluminum Substrates: Not prefinished aluminum.

1. Water-Based Light Industrial Coating System MPI EXT 5.6G:
 - a. Prime Coat: Primer, quick dry, for aluminum, as recommended by topcoat manufacturer to suit conditions.
 - b. Intermediate Coat: Light industrial coating, exterior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.

F. Fiberglass Substrates:

1. Latex System MPI EXT 6.7A:
 - a. Prime Coat: Primer, bonding, solvent based, MPI #69.
 - b. Intermediate Coat: Latex, exterior, matching topcoat.
 - c. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

G. Plastic Trim Fabrication Substrates:

1. Latex System MPI EXT 6.8A:
 - a. Prime Coat: Primer, bonding, solvent based, MPI #69.
 - b. Intermediate Coat: Latex, exterior, matching topcoat.
 - c. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

H. Exterior Canvas Substrates:

1. Latex System MPI EXT 10.1A:
 - a. Prime Coat: Latex, exterior, matching topcoat.
 - b. Intermediate Coat: Latex, exterior, matching topcoat.
 - c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

3.7 GRAFFITI RESISTANT COATINGS

- A. Performance Rate: Apply every 10 years.
- B. Preferred Manufacturers and Product lines: Professional Products of Kansas - Professional Water Sealant and Anti-Graffiti system; ProSoCo - Block Guard and Graffiti Control II; or Rain Guard - Vandguard Ten
- C. Use: All exterior concrete substrates below 96 inches above adjacent grade.

END OF SECTION

SECTION 099123 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes surface preparation and the application of paint systems on the following interior substrates:
 - 1. Concrete.
 - 2. Steel and iron.
 - 3. Galvanized metal.
 - 4. Fiberglass.
 - 5. Plastic.
 - 6. Gypsum board.
 - 7. Cotton or canvas insulation covering.
 - 8. ASJ insulation covering.
 - 9. Bituminous-coated surfaces.

- B. Related Requirements:
 - 1. Section 051200 "Structural Steel Framing" for shop primer used on exposed structural steel.

1.2 DEFINITIONS

- A. MPI Gloss Level 1 (Matte or Flat Finish): Not more than five units at 60 degrees and 10 units at 85 degrees, according to ASTM D 523.
- B. MPI Gloss Level 3 (Eggshell Finish): 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.
- C. MPI Gloss Level 5 (Semi-Gloss Finish): 35 to 70 units at 60 degrees, according to ASTM D 523.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Include Printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
 - 2. Indicate VOC content.

- B. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
 - 1. Submit Samples on rigid backing, 8 inches square.
 - 2. Apply coats on Samples in steps to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.

- C. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.4 CLOSEOUT SUBMITTALS

- A. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

- B. Submit two painted samples, 6 inches by 6 inches illustrating each color and system used on the Project.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Paint: 5 percent, but not less than 2 gal. of each material and color applied.

1.6 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
 - b. Other Items: Architect will designate items or areas required.
 - 2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to University.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain products from a single manufacturer.
- B. Manufacturers: Provide colors, gloss and finish indicated on Drawings either by manufacturer indicated, or equal matching color by one of the following to the acceptance of the Architect:
 - 1. Benjamin Moore & Co. (Basis-of-Design)
 - 2. Dunn Edwards.
 - 3. PPG Paints.
 - 4. Sherwin-Williams Company (The).

- C. Provide products indicated in Interior Painting Schedule at the end of this Section as manufactured by Benjamin Moore, or provide MPI-listed equivalent products from listed manufacturer's premium or professional product line.
 - 1. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."
- D. Colors: Colors indicated on Drawings are by Benjamin Moore. Color matching by other listed manufacturer is acceptable.

2.2 PAINT, GENERAL

- A. Material Compatibility:
 - 1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
- B. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:
 - 1. Flat Paints and Coatings: 50 g/L.
 - 2. Nonflat Paints and Coatings: 50 g/L.
 - 3. Dry-Fog Coatings: 150 g/L.
 - 4. Primers, Sealers, and Undercoaters: 100 g/L.
 - 5. Rust-Preventive Coatings: 100 g/L.
 - 6. Zinc-Rich Industrial Maintenance Primers: 100 g/L.
 - 7. Pretreatment Wash Primers: 420 g/L.
 - 8. Shellacs, Clear: 730 g/L.
 - 9. Shellacs, Pigmented: 550 g/L.
- C. Low-Emitting Materials: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - 1. Concrete: 12 percent.
 - 2. Gypsum Board: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
- E. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean and prepare using methods recommended in writing by paint manufacturer, but not less than surface preparation requirements indicated where indicated in paint schedule below.
- F. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- G. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- H. Cotton or Canvas Insulation Covering Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.
- I. Gypsum Board Substrates: Sand joint compound smooth. Remove dust from sanding procedures.

3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 - 3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 - 4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

3.4 FIRE-RATED AND SMOKE CONTAINMENT ASSEMBLIES

- A. Fire walls, fire barriers, fire partitions, smoke barriers and smoke partitions or any other wall required to have protected openings or penetrations shall be effectively and permanently identified with signs or stenciling. Such identification shall:
 - 1. Be located in accessible concealed floor, floor-ceiling or attic spaces; and
 - 2. Be repeated at intervals not exceeding 30 feet measured horizontally along both sides of the wall or partition; and
 - 3. Include lettering not less than 3 inches in height, incorporating the suggested wording: " X HOUR FIRE AND/OR SMOKE BARRIER-PROTECT ALL OPENINGS" or other wording approved or required by AHJ (Authority Having Jurisdiction). Replace "X" with the appropriate designated hourly rating.
 - 4. Apply a minimum one-inch wide bright red horizontal line, both sides of wall, interrupted for approved text, at the required interval.
- B. Refer to the Life Safety Plan Drawings for locations of walls and applicable ratings.

3.5 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: University may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
 - 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 - 2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.6 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.7 INTERIOR PAINTING SCHEDULE

- A. Concrete Substrates, Nontraffic Surfaces: One of the following:
 - 1. High-Performance Architectural Latex System, MPI INT 3.1C:
 - a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

- 1) Benjamin Moore Ultra Spec Masonry Interior/Exterior 100% Acrylic Sealer #608 or self-prime with topcoat as instructed by topcoat manufacturer
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, high performance architectural, semigloss (MPI Gloss Level 5), MPI #141.
 - 1) Benjamin Moore Aura Waterborne Interior Paint & Primer #N528
 - a) Film Thickness (per coat): 1.4 to 1.5 mils DFT (Not less than 3.6 mils wet)
 2. Institutional Low-Odor/VOC Latex System, MPI INT 3.1M:
 - a. Prime Coat: Primer/sealer, interior, institutional low odor/VOC, as recommended by topcoat manufacturer.
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, semigloss (MPI Gloss Level 5), MPI #147.
 - 1) Benjamin Moore Ultra Spec 500, #T546
 - a) Film Thickness (per coat): 1.4 to 1.6 mils DFT (Not less than 3.6 mils wet)
- B. Steel Substrates:
 1. Institutional Low-Odor/VOC Latex System:
 - a. Surface Preparation: SSPC-SP 6, minimum.
 - b. Shop Prime Coat: Shop primer specified in Section where substrate is specified.
 - c. Prime Coat: If shop primer is not compatible with topcoats and additional primer is required over shop primer or for touch up of shop primer, provide additional coat of compatible anticorrosive primer as recommended by topcoat manufacturer.
 - d. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - e. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.
 - 1) Benjamin Moore Ultra Spec 500, #T546
 - a) Film Thickness (per coat): 1.4 to 1.6 mils DFT (Not less than 3.6 mils wet)
 2. Water-Based Dry-Fall System MPI INT 5.1C or MPI INT 5.1CC:
 - a. Shop Prime Coat: Shop primer specified in Section where substrate is specified.
 - b. Prime Coat: If shop primer is not compatible with topcoats and additional primer is required over shop primer or for touch up of shop primer, provide additional coat of compatible anticorrosive primer as recommended by topcoat manufacturer.
 - c. Topcoat: Dry fall, latex, flat, MPI #118.
 - 1) Benjamin Moore Latex Dry Fall #395
 - a) Film Thickness : Not less than 1.9 mils DFT, single coat (Not less than 4.6 mils wet)
 3. For high-performance epoxy and urethane coatings on interior steel railings, and interior hollow metal doors and frames, refer to Section 099600 "High-Performance Coatings."
- C. Galvanized-Metal Substrates (Bonderized):
 1. Institutional Low-Odor/VOC Latex System:
 - a. Prep: Clean with oil and grease emulsifier as recommended by topcoat manufacturer.
 - 1) Benjamin Moore Oil & Grease Emulsifier Corotech V600
 - b. First Coat: Light industrial coating, exterior, water based, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

- 1) Benjamin Moore Ultra Spec 500, #T546
 - a) Film Thickness (per coat): 1.4 to 1.6 mils DFT (Not less than 3.6 mils wet)
- D. Gypsum Board Substrates:
 1. Institutional Low-Odor/VOC Latex System:
 - a. Prime Coat: Primer sealer, interior, institutional low odor/VOC, MPI #149.
 - 1) Benjamin Moore Eco Spec Interior Latex Primer #N372
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, eggshell (MPI Gloss Level 3), MPI #145.
 - 1) Benjamin Moore Ultra Spec 500, #T538
 - a) Film Thickness (percoat): 1.5 to 1.7 mils DFT (Not less than 3.6 mils wet)
 2. For high-performance epoxy coatings on drywall, refer to Section 099600 "High-Performance Coatings."
- E. Fiberglass Substrates:
 1. Latex System MPI INT 6.7A:
 - a. Prime Coat: Primer, bonding, water based, MPI #17.
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.
- F. Plastic Substrates:
 1. Latex System MPI INT 6.8E:
 - a. Prime Coat: Primer, bonding, solvent based, MPI #69.
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.
- G. Cotton or Canvas and ASJ Insulation-Covering Substrates: Including pipe and duct coverings.
 1. Latex System MPI INT 10.1A:
 - a. Prime Coat: Primer sealer, latex, interior, MPI #50.
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.
- H. Bituminous-Coated Substrates:
 1. Aluminum Paint System MPI INT 10.2C:
 - a. Prime Coat: Primer, rust inhibitive, water based, MPI #107.
 - b. Intermediate Coat: Aluminum paint, matching topcoat.
 - c. Topcoat: Aluminum paint, MPI #1.

END OF SECTION

SECTION 099600 - HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes surface preparation and the application of high-performance coating systems.
- B. Related Requirements:
 - 1. Section 099113 "Exterior Painting" for general exterior field painting.
 - 2. Section 099123 "Interior Painting" for general interior field painting.

1.2 DEFINITIONS

- A. MPI Gloss Level 5 (Semi-Gloss Finish): 35 to 70 units at 60 degrees, according to ASTM D 523.
- B. MPI Gloss Level 6 (Gloss Finish): 70 to 85 units at 60 degrees, according to ASTM D 523.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
 - 2. Indicate VOC content.
- B. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.
 - 1. Submit Samples on rigid backing, 8 inches square.
 - 2. Apply coats on Samples in steps to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.
- C. Product List: Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.4 CLOSEOUT SUBMITTALS

- A. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.
- B. Submit two painted samples, 6 inches by 6 inches illustrating each color and system used on the Project.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Coatings: 5 percent, but not less than 2 gal. of each material and color applied.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

1.7 FIELD CONDITIONS

- A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
- C. Do not apply exterior coatings in snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain products from a single manufacturer.
- B. Manufacturers: Provide colors, gloss and finish indicated on Drawings matched by one of the following to the acceptance of the Architect:
 - 1. Benjamin Moore
 - 2. Carboline.
 - 3. Corotech.
 - 4. Sherwin-Williams Co.
 - 5. PPG Paints
 - 6. Tnemec Co. (The)
- C. Provide products indicated, or provide MPI-listed equivalent products from listed manufacturer's premium or professional product line.
 - 1. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

2.2 HIGH-PERFORMANCE COATINGS, GENERAL

- A. Material Compatibility:
 - 1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
 - 3. Products shall be of same manufacturer for each coat in a coating system.
- B. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction. Refer, also, to Section 099123 "Interior Painting."
- C. Colors: As indicated on the Drawings or color matched by one of listed manufacturers.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - 1. Gypsum Board: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.
- D. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer.
- E. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- F. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings. Clean with vinyl wash or emulsifier as instructed by manufacturer.

3.3 APPLICATION

- A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
 - 1. Use applicators and techniques suited for coating and substrate indicated.
 - 2. Coat surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
 - 3. Coat backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 - 4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
- B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

- C. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.
- D. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: University may engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.
 - 1. Contractor shall touch up and restore coated surfaces damaged by testing.
 - 2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating operation. Correct damage to work of other trades by cleaning, repairing, replacing, and recoating, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.6 EXTERIOR HIGH-PERFORMANCE COATING SCHEDULE

- A. General: The following products are provided to establish an intended level of quality. The inclusion of these products here does not preclude the use of other comparable products by any of the listed manufacturers as long as the colors match the basis-of-design colors indicated in the Finish Schedule on the Drawings to the acceptance of the Architect.
 - 1. Verify each coating system, primer, DFT, and substrate preparation requirements with coating manufacturer.
- B. Metallic-coated hollow metal doors and frames:
 - 1. Polyurethane, Pigmented
 - a. Pretreatment: Refer to "Preparation" article in this specification Section.
 - b. Factory Primer: Door manufacturer's standard factory-primer over galvanized steel.
 - 1) Verify compatibility of topcoats with factory-primer. If required, field apply one coat of epoxy primer as recommended by topcoat manufacturer.
 - c. Topcoats: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6).
 - 1) Product: Tnemec EnduraShield WB Series 1080
 - a) Film Thickness (per coat): 2.0 to 3.0 mils DFT; 2 coats over primer.
- C. Galvanized-Metal Substrates: Railings and similar galvanized steel items.
 - 1. Pigmented Polyurethane over Epoxy Primer System:

- a. Remove oil or soap film with detergent or emulsion cleaner as per SSPC SP-1 and galvanizing requirements, then use a phosphatizing conversion coating or vinyl wash indicated. Alternately, power tool clean to uniformly abrade the surface or lightly abrasive blast with a fine abrasive to produce a uniform and dense anchor profile of 1.0 – 2.0 mils in accordance with SSPC SP-16 and paint manufacturer's recommendations.
- b. Galvanizing that has had at least 12 months of exterior weathering may be coated after power washing to remove all contaminants and white rust. Galvanized surfaces that have been passivated with a chromate treatment shall be abrasive blasted. Coatings may not adhere to chromate sealed galvanizing if the chromates are not completely removed.
- c. Vinyl Wash or Emulsifier: Vinyl butyral/phosphoric acid primer wash coat or oil and grease emulsifier as recommended by finish coat manufacturer to suit condition.
- d. Prime Coat: Primer, epoxy, anti-corrosive, for galvanized metal MPI #101
- e. Topcoats: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6).
 - 1) Product: Tnemec EnduraShield WB Series 1080
 - a) Film Thickness (per coat): 2.0 to 3.0 mils DFT; 2 coats over primer.

3.7 INTERIOR HIGH-PERFORMANCE COATING SCHEDULE

- A. General: Verify each coating system, primer, DFT, and substrate preparation requirements with coating manufacturer.
- B. Steel Substrates; Steel railings and handrails, exposed metal stairs:
 - 1. Pigmented Polyurethane over Epoxy Primer System:
 - a. Pretreatment: Refer to "Preparation" article in this specification Section.
 - b. Factory Primer: Door manufacturer's standard factory-primer over steel.
 - 1) Verify compatibility of topcoats with factory-primer. If required, field apply one coat of the following epoxy primer as recommended by topcoat manufacturer.
 - c. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.
 - 1) Benjamin Moore HP Epoxy Mastic, #HP4600
 - a) Film Thickness: Not less than 4.6 mils DFT, single coat. (Not less than 5.8 mils wet)
 - d. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
 - e. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.
 - 1) Benjamin Moore Aliphatic Urethane, #HP5000
 - a) Film Thickness (per coat): 2.3 to 3.3 mils DFT (Not less than 3.2 mils wet)
- C. Steel Substrates; Factory-primed interior hollow metal doors and frames:
 - 1. Pigmented Polyurethane over Epoxy Primer System:
 - a. Prep: Surfaces shall be clean, dry and free of all grease, dirt, dust, oil and wax. Remove all remaining shop primer, rust and mill scale via Hand Tool Cleaning (SSPC-SP 2) or Power Tool cleaning (SSPC-SP 3). Fill holes and cracks and sand smooth. Glossy surfaces must be fully deglossed. Moderate to heavily rusted areas must be thoroughly prepared and active rust shall be properly removed. Clean all surfaces using manufacturer's oil and grease emulsifier as instructed by primer and topcoat manufacturer.
 - b. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.
 - 1) Benjamin Moore HP Epoxy Mastic, #HP4600
 - a) Film Thickness: Not less than 4.6 mils DFT, single coat. (Not less than 5.8 mils wet)
 - c. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
 - d. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

- 1) Benjamin Moore Aliphatic Urethane, #HP5000
 - a) Film Thickness (per coat): 2.3 to 3.3 mils DFT (Not less than 3.2 mils wet)

D. Gypsum Board Substrates:

1. On Walls and Ceilings, where indicated: Epoxy, eggshell:
 - a. Prime Coat/PVA Sealer: 100% acrylic drywall primer/sealer, MPI #149 - Verify compatibility with drywall joint compound; test to ensure bond. Clean drywall of all sanding dust prior to primer application according to primer manufacturer's instructions and limitations.
 - 1) Benjamin Moore EcoSpec Interior Latex Primer, #N372.
 - a) Film Thickness: Not less than 1.2 mils DFT, single coat. (Not less than 4.0 mils wet)
 - b. Intermediate Coat: Waterborne epoxy, matching topcoat
 - c. Topcoat: Waterborne epoxy, eggshell (MPI Gloss Level 3-4), MPI #151
 - 1) Benjamin Moore Pre-Catalyzed Waterborne Epoxy, #V342
 - a) Film Thickness (per coat): 1.5 to 1.7 mils DFT (Not less than 4 mils wet)

END OF SECTION

SECTION 101100 - VISUAL DISPLAY UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Fixed markerboards
 2. Sliding markerboards.
 3. Floor-to-ceiling writable surfaces.
 4. Tackable linoleum specialty bulletin boards.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.
 2. Include electrical characteristics for motorized units.
- B. Shop Drawings: For each type of visual display units.
1. Include plans, elevations, sections, details, and attachment to other work.
 2. Show locations of panel joints. Show locations of field-assembled joints for factory-fabricated units too large to ship in one piece.
 3. Show locations and layout of special-purpose graphics.
 4. Include sections of typical trim members.
 5. Include wiring diagrams for power and control wiring.
- C. Samples for Verification: For each type of visual display unit indicated.
1. Visual Display Panel: Not less than 8-1/2 by 11 inches, with facing, core, and backing indicated for final Work. Include one panel for each type, color, and texture required.
 2. Trim: 6-inch- long sections of each trim profile.
 3. Display Rail: 6-inch- long section of each type.
- D. Product Schedule: For visual display units. Use same designations indicated on Drawings.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For visual display units to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Provide the following upon request:
1. Qualification Data: For qualified Installer.
 2. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for surface-burning characteristics of tackboards.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of construction contiguous with visual display units by field measurements before fabrication.
 - 1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

1.7 WARRANTY

- A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 50 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 VISUAL DISPLAY BOARD ASSEMBLY

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Best-Rite Manufacturing; a brand division of MooreCo, Inc.
 - 2. Claridge Products and Equipment, Inc.
 - 3. Platinum Visual Systems; a division of ABC School Equipment, Inc.
- B. Porcelain-Enamel Markerboard Panels: Balanced, high-pressure, factory-laminated magnetic markerboard assembly of three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with low-gloss finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.
 - 1. Face Sheet Thickness: 28 gauge, uncoated base metal thickness.
 - 2. Hardboard Core: 1/4 inch thick; with 0.005-inch-thick, aluminum foil backing.
 - 3. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.
 - 4. Color: White.
- C. Aluminum Frames and Trim: Fabricated from not less than 0.062-inch- thick, extruded aluminum; standard size and shape.
- D. Markertray: Manufacturer's standard; continuous.
- E. Display Rail: Manufacturer's standard, extruded-aluminum display rail with plastic-impregnated-cork insert, end stops, and continuous paper holder, designed to hold accessories.
 - 1. Size: 2 inches high by full length of visual display unit.
- F. Paper Holder Display Rail: Extruded aluminum; designed to hold paper by clamping action.

2.2 SLIDING VISUAL DISPLAY UNITS

- A. Vertical-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed rear visual display panel, and aluminum-framed vertical-sliding panels. Provide panels that operate smoothly without vibration or chatter.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Best-Rite Manufacturing; a brand division of MooreCo, Inc.
 - b. Claridge Products and Equipment, Inc.
 - c. Platinum Visual Systems; a division of ABC School Equipment, Inc.
2. Type: Tubular frame on top and two sides, with sides extending to floor; with kick panel to conceal sliding panels. Design unit to support panels independently of wall.
3. Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide sliding panels, each equal to not less than one-half of overall height of unit.
 - a. Quantity of Panels: As indicated.
4. Hardware: Manufacturer's standard, neoprene ball-bearing end rollers, four on each side of each sliding panel. Counterbalance each sliding panel with counterweights supported by steel aircraft cable over ball-bearing sheaves; with removable cover plate for access to counterweights. Provide rubber bumpers at top and bottom for each sliding panel.
5. Overall Width: As indicated on Drawings.
6. Overall Height: As indicated on Drawings.

B. Panels and Accessories:

1. Sliding Markerboard Panel: Porcelain-enamel-faced markerboard panel on manufacturer's standard core designed to be rigid and to resist warpage.
 - a. Color: As selected by Architect from full range of industry colors
2. Fixed Rear Markerboard Panel: Porcelain-enamel-faced markerboard panel on core indicated.
 - a. Color: As selected by Architect from full range of industry colors.
3. Accessories: Chalktray.
4. Display Rail: Manufacturer's standard, extruded-aluminum display rail with plastic-impregnated-cork insert, end stops, and continuous paper holder, designed to hold accessories.
 - a. Size: 1 inch high by full length of visual display unit.
5. Aluminum Trim: Factory- or field- applied; in manufacturer's standard size and profile; with clear anodic finish.

2.3 FLOOR-TO-CEILING VISUAL DISPLAY ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Claridge Products and Equipment, Inc.
 2. Platinum Visual Systems; a division of ABC School Equipment, Inc.
- B. Basis-of-Design Product: Platinum Visual Writanium Porcelain Markerwall from manufacturer's FCS Series
- C. Floor-to-Ceiling Markerwall Panel Assemblies: Consisting of markerboard panels with porcelain-enamel facing on core indicated; fabricated for floor-to-ceiling assemblies.
1. Width: As indicated on Drawings.
 2. Height: Full height of wall.
 3. Joints: Butt joint factory-fired edges vertically to form smooth transition from panel to panel
 4. Splines: Panels to be factory-milled to accept aluminum stabilizing spline at each joint
 5. Color: As selected from manufacturer's standard color
- D. Porcelain Markerwall Materials:
1. Steel Face Sheets: Writing surface will be 28 gauge steel face with porcelain enamel finish fused to the steel sheet using a continuous coil process

2. Core Material: 7/16 inch thick particleboard
3. Backing Material: 0.005 inch aluminum backing sheet
4. Metal Trim and Accessories: 6063 aluminum alloy with a T5 temper with clear anodized finish
 - a. Frame: Channel frame with 3/4 inch face. No exposed fasteners permitted
 - b. Chalktray: Standard solid magnetic chalktray with ribbed section and smoothly curved ends
5. Adhesive: As recommended by manufacturer for project conditions

2.4 LINOLEUM SHEET TACKABLE SURFACES - TP-1 AND TP-2

- A. Basis-of-Design Product: Subject to compliance with requirements, provide "Bulletin Board" pinboard linoleum as manufactured by Forbo Flooring Systems, or Architect approved equal.
 1. Thickness: 1/4 inch
 2. Size: As indicated.
 3. Color: As indicated on Drawings.
 4. Mounting: As indicated on Drawings.

2.5 MATERIALS

- A. Porcelain-Enamel Face Sheet: PEI-1002, with face sheet manufacturer's standard two- or three-coat process.
- B. Plastic-Impregnated-Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto fabric backing; with washable vinyl finish and integral color throughout with surface-burning characteristics indicated.
- C. Hardboard: ANSI A135.4, tempered.
- D. Extruded Aluminum: ASTM B 221, Alloy 6063.
- E. Adhesives for Field Application: Mildew-resistant, nonstaining adhesive for use with specific type of panels, sheets, or assemblies; and for substrate application; as recommended in writing by visual display unit manufacturer.
 1. Verify adhesives have a VOC content of 50 g/L or less.
 2. Verify adhesive complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in Section 099123 "Interior Painting" and recommended in writing by visual display unit manufacturer for intended substrate.

2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

- A. General: As selected by Architect from the following:

1. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine walls and partitions for proper preparation and backing for visual display units.
- C. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances, such as dirt, mold, and mildew, that could impair the performance of and affect the smooth, finished surfaces of visual display boards.
- C. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between visual display units and wall surfaces.
- D. Prime wall surfaces indicated to receive visual display units and as recommended in writing by primer/sealer manufacturer and visual display unit manufacturer.

3.3 INSTALLATION

- A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
- B. Field-Assembled Visual Display Board Assemblies: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.
 1. Where size of visual display board assemblies or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.
- C. Factory-Fabricated Visual Display Board Assemblies: Attach concealed clips, hangers, and grounds to wall surfaces and to visual display board assemblies with fasteners at not more than 16 inches o.c. Secure tops and bottoms of boards to walls.
- D. Visual Display Board Assembly Mounting Heights: Install visual display units at mounting heights indicated on Drawings, or if not indicated, at heights indicated below.
 1. Mounting Height: 36 inches above finished floor to top of chalktray.
- E. Sliding Visual Display Units: Install units at mounting heights indicated. Attach to wall framing with fasteners at not more than 16 inches o.c.
 1. Adjust panels to operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

- F. Floor-to-Ceiling Markerboard Panels: Attach panels to wall surface with egg-size adhesive gobs at 16 inches o.c., horizontally and vertically.
 - 1. Join adjacent panels with concealed steel splines for smooth alignment.

3.4 CLEANING AND PROTECTION

- A. Clean visual display units according to manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.
- B. Touch up factory-applied finishes to restore damaged or soiled areas.
- C. Cover and protect visual display units after installation and cleaning.

END OF SECTION

SECTION 101419 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Illuminated, fabricated channel dimensional characters.

1.2 DEFINITIONS

- A. Illuminated: Illuminated by lighting source integrally constructed as part of the sign unit.

1.3 COORDINATION

- A. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For signs.
 - 1. Include fabrication and installation details and attachments to other work.
 - 2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
 - 3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.
 - 4. Show locations of electrical service connections.
 - 5. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
 - 1. Include representative Samples of available typestyles and graphic symbols.
- D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
 - 1. Dimensional Characters: Full-size Sample of each type of dimensional character.
 - 2. Exposed Accessories: Full-size size Sample of each accessory type.
 - 3. Full-size Samples, if approved, will be returned to Contractor for use in the Project.
- E. Product Schedule: For dimensional letter signs. Use same designations indicated on Drawings or specified.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For signs to include in maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Provide the following upon request:
 - 1. Qualification Data: For Installer.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify locations of electrical service embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Separation or delamination of sheet materials and components.
 2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.
1. Uniform Wind Load: As indicated on Drawings.
 2. Concentrated Horizontal Load: As indicated on Drawings.
 3. Other Design Load: As indicated on Drawings
 4. Uniform and concentrated loads need not be assumed to act concurrently.
- B. Thermal Movements: For exterior fabricated channel dimensional characters, allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 DIMENSIONAL CHARACTERS

- A. Fabricated Channel Characters: Metal face and side returns, formed free from warp and distortion; with uniform faces, sharp corners, and precisely formed lines and profiles; internally braced for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners; and as follows.
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. ASI Sign Systems, Inc., or comparable by one of the following:
 - 1) Arrow Sign Company
 - 2) Ellis & Ellis Sign Systems, Inc.
 - 3) Martinelli Environmental Graphics
 - 4) Priority Graphics
 - 5) WeidnerCA
 2. Illuminated Characters: Backlight character construction with LED lighting, including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from character surfaces as needed to illuminate evenly.
 - a. Power: 120 V, 60 Hz, 1 phase, 15 A.
 - b. Weeps: Provide weep holes to drain water at lowest part of exterior characters. Equip weeps with permanent baffles to block light leakage without inhibiting drainage.

3. Character Material: Sheet or plate aluminum.
4. Material Thickness: Manufacturer's standard for size and design of character.
5. Character Height: As indicated on Drawings.
6. Character Depth: As indicated on Drawings.
7. Finishes:
 - a. Integral Metal Finish: As selected by Architect from full range of industry finishes.
8. Mounting: Manufacturer's standard for size and design of character as indicated on Drawings.
9. Typeface: Campus standard.

2.3 DIMENSIONAL CHARACTER MATERIALS

- A. Aluminum Castings: ASTM B 26/B 26M, alloy and temper recommended by sign manufacturer for casting process used and for type of use and finish indicated.
- B. Aluminum Sheet and Plate: ASTM B 209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- D. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.4 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:
 1. Use concealed fasteners and anchors unless indicated to be exposed.
 2. For exterior exposure, furnish stainless-steel devices unless otherwise indicated.
 3. Exposed Metal-Fastener Components, General:
 - a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
 - b. Fastener Heads: For nonstructural connections, use flathead oval countersunk Insert shape screws and bolts with tamper-resistant Allen-head spanner-head one-way-head Insert slot design slots unless otherwise indicated.
 4. Sign Mounting Fasteners: as indicated or as provided as standard to suit conditions.
 - a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.
- B. Adhesive: As recommended by sign manufacturer.
 1. Adhesives shall have a VOC content of 70 g/L or less.
 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

2.5 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
 - 1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 - 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 - 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
 - 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 - 5. Internally brace dimensional characters for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
 - 6. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
 - 7. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.
- B. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.
 - 1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish to match sign-background color unless otherwise indicated.

2.6 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

- A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Verify that electrical service is correctly sized and located to accommodate signs.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 - 2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
 - 3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

- B. Mounting Methods:
 - 1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
 - a. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.
 - 2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
 - a. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate, and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.
 - 3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
 - 4. Back Bar and Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position, so that signage is correctly located and aligned.

3.3 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

- B. Remove temporary protective coverings and strippable films as signs are installed.

- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION

SECTION 101423 - PANEL SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Room-identification signs.
 - 2. Directional signage.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For panel signs.
 - 1. Include fabrication and installation details and attachments to other work.
 - 2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
 - 3. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.
- C. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
 - 1. Room-Identification and Directional Signs: Full-size Sample.
- D. Sign Schedule: Use same designations specified or indicated on Drawings or in a sign schedule.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For signs to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Provide the following upon request:
 - 1. Qualification Data: For Installer.
 - 2. Wiring Diagrams: Include diagrams for power, signal, and control wiring.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify locations of anchorage devices embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Deterioration of embedded graphic image.
 - c. Separation or delamination of sheet materials and components.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Thermal Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.
 1. Temperature Change: Insert temperature change.
- B. Accessibility Standard: Comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design as amended by CBC Title 24 Section 11B-703 for signs.

2.2 SIGNS

- A. General: Signs shall conform to CBC Section 11B-216 and as otherwise indicated.
- B. Room-Identification, Regulatory, Emergency, and Directional and Wayfinding Signs: Signs with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
 1. Basis-of-Design Product: Match Campus standard and as indicated on Drawings.
 2. Mounting: Surface mounted to wall with two-face tape or hook-and-loop tape.
 3. Surface Finish and Applied Graphics: Match existing.
 4. Text and Typeface: Match existing with accessible raised characters and Braille. Finish raised characters to contrast with background color, and finish Braille to match background color.
 5. Flatness Tolerance: Sign panel shall remain flat or uniformly curved under installed conditions as indicated and within a tolerance of plus or minus 1/16 inch measured diagonally from corner to corner.

2.3 ACCESSORIES

- A. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch thick, with adhesive on both sides.
- B. Hook-and-Loop Tape: Manufacturer's standard two-part tape consisting of hooked part on sign back and looped side on mounting surface.

2.4 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
 1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 3. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 4. Internally brace signs for stability and for securing fasteners.
 5. Provide rebates, lugs, and brackets necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
- B. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into panel surface indicated to produce precisely formed copy, incised to uniform depth.
 1. Engraved Metal: Fill engraved graphics with manufacturer's standard baked enamel.

2. Engraved Opaque Acrylic Sheet: Fill engraved graphics with manufacturer's standard enamel.
 3. Face-Engraved Clear Acrylic Sheet: Fill engraved copy with manufacturer's standard enamel. Apply manufacturer's standard opaque background color coating to back face of acrylic sheet.
 4. Engraved Plastic Laminate: Engrave through exposed face ply of plastic-laminate sheet to expose contrasting core ply.
- C. Subsurface-Applied Graphics: Apply graphics to back face of clear face-sheet material to produce precisely formed image. Image shall be free of rough edges.
- D. Subsurface-Engraved Graphics: Reverse engrave back face of clear face-sheet material. Fill resulting copy with manufacturer's standard enamel. Apply opaque manufacturer's standard background color coating over enamel-filled copy.

2.5 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Verify that anchor inserts are correctly sized and located to accommodate signs.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 2. Install signs so they do not protrude or obstruct according to the accessibility standard.
 3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
 4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- B. Room-Identification Signs and Other Accessible Signage: Install in locations on walls as indicated and according to accessibility standard.
- C. Mounting Methods:

1. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position, and push to engage tape adhesive.
 2. Hook-and-Loop Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply sign component of two-part tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage; push to engage tape adhesive. Keep tape strips 0.250 inch away from edges to prevent visibility at sign edges when sign is initially installed or reinstalled. Apply substrate component of tape to substrate in locations aligning with tape on back of sign; push and rub well to fully engage tape adhesive to substrate.
 3. Shim-Plate Mounting: Provide 1/8-inch- thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other direct mounting methods are impractical. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach signs to plate using one of the methods specified above.
- D. Signs Mounted on Glass: Provide opaque sheet matching sign material and finish onto opposite side of glass to conceal back of sign.

3.3 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION

SECTION 102113.17 - PHENOLIC-CORE TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Phenolic-core toilet compartments.
- B. Related Requirements:
 - 1. Section 092216 "Non-Structural Metal Framing" for sheet metal backing in-wall.
 - 2. Section 102800 "Toilet Accessories" for accessories mounted on toilet compartments.

1.2 COORDINATION

- A. Coordinate requirements for reinforcing, and other supports concealed within wall to ensure that toilet compartments can be supported and installed as indicated.

1.3 ACTION SUBMITTALS

- A. Product Data: Phenolic-core toilet compartments.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for toilet compartments.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, details, and attachment details.
 - 2. Show locations of cutouts for compartment-mounted toilet accessories.
 - 3. Show locations of centerlines of toilet fixtures.
 - 4. Show locations of floor drains.
- C. Samples for Verification: Actual sample of finished products for each type of toilet compartment, hardware, and accessory.
 - 1. Size: Manufacturer's standard size.
- D. Product Schedule: For toilet compartments, prepared by or under the supervision of supplier, detailing location and selected colors for toilet compartment material.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For toilet compartments.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements, and coordinate before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 75 or less.
 2. Smoke-Developed Index: 450 or less.
- B. Structural Performance: Where grab bars are mounted on toilet compartments, design panels to comply with the following requirements:
1. Panels are able to withstand a concentrated load on grab bar of at least 250 lbf applied at any direction and at any point, without deformation of panel.
- C. Regulatory Requirements: Comply with applicable provisions in CBC Title 24 Chapter 11B for toilet compartments designated as accessible.

2.2 PHENOLIC-CORE TOILET COMPARTMENTS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. ASI Global Partitions.
 2. Bobrick Washroom Equipment, Inc.
 3. Bradley Corporation.
- B. Basis-of-Design Product: Bobrick Sierra Series, Model 2092G.67P
- C. Toilet-Enclosure Style: Overhead braced.
- D. Urinal-Screen Style: Wall hung.
- E. Door, Panel, and Pilaster Construction: Solid phenolic-core material with melamine facing on both sides fused to substrate during manufacture (not separately laminated), and with eased and polished edges. Provide minimum 3/4-inch- thick doors and pilasters and minimum 1/2-inch- thick panels. Provide with no-sightline system consisting of door and pilaster lapped edges on strike side of door and door and pilaster lapped edges on hinge side of door (unless continuous hinge is used).
- F. Urinal-Screen Construction: Matching panel construction.
- G. Pilaster Shoes: Formed from stainless steel sheet, not less than 0.031-inch nominal thickness and 3 inches high, finished to match hardware.
- H. Brackets (Fittings):
1. Full-Height (Continuous) Type: Manufacturer's standard design, stainless steel.
- I. Phenolic Compartment Finish: One color in each room.
1. Through-Color Phenolic: Manufacturer's standard solid through-color.
 - a. Color: As selected by Architect from manufacturer's full range.

2.3 HARDWARE AND ACCESSORIES

- A. Door Hardware and Accessories, Heavy Duty: Manufacturer's heavy-duty institutional operating hardware and accessories.
1. Hinges: Manufacturer's minimum 0.062-inch- thick, stainless steel surface-mounted, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees, allowing emergency access by lifting door. Mount with through bolts.
 2. Latch and Keeper: Manufacturer's heavy-duty, surface-mounted, cast stainless steel latch unit designed to resist damage due to slamming, with combination rubber-faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at toilet enclosures designated as accessible. Mount with through bolts.

3. Coat Hook: Manufacturer's heavy-duty, combination cast stainless steel hook and rubber-tipped bumper, sized to prevent inswinging door from hitting compartment-mounted accessories. Mount with through bolts.
 4. Door Bumper: Manufacturer's heavy-duty, rubber-tipped, cast stainless steel bumper at outswinging doors. Mount with through bolts.
 5. Door Pull: Manufacturer's heavy-duty, cast stainless steel pull at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at toilet enclosures designated as accessible. Mount with through bolts.
- B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.
- C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.4 MATERIALS

- A. Aluminum Extrusions: ASTM B221.
- B. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, stretcher-leveled standard of flatness.
- C. Stainless Steel Castings: ASTM A743/A743M.

2.5 FABRICATION

- A. Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.
- B. Overhead-Braced Units: Manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Door Size and Swings: Unless otherwise indicated, provide 24-inch- wide, inswinging doors for standard toilet enclosures and 36-inch- wide, outswinging doors with a minimum 32-inch- wide, clear opening for toilet enclosures designated as accessible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.
1. Confirm location and adequacy of blocking and supports required for installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
1. Maximum Clearances:
 - a. Pilasters and Panels or Screens: 1/2 inch.

- b. Panels or Screens and Walls: 1 inch.
- 2. Full-Height (Continuous) Brackets: Secure panels or screens to walls and to pilasters with full-height brackets.
 - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
 - b. Align brackets at pilasters with brackets at walls.
- B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- C. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

3.3 ADJUSTING

- A. Hardware Adjustment: Adjust and lubricate hardware in accordance with hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

END OF SECTION 102113.17

SECTION 102600 - WALL PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Plastic corner guards (CG-#)
- B. Related Requirements:
 - 1. Section 087100 "Door Hardware" for metal armor, kick, mop, and push plates.

1.2 ACTION SUBMITTALS

- A. Product Data: Include construction details, material descriptions, impact strength, fire-test-response characteristics, dimensions of individual components and profiles, and finishes for each impact-resistant wall protection unit.
- B. Sustainable Design Submittals:
 - 1. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: For each impact-resistant wall protection unit showing locations and extent. Include sections, details, joint locations and attachments to other work.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 - 1. Corner Guards and Wall Base: 12 inches long. Include examples of joinery, corners, end caps, and field splices.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each impact-resistant wall protection unit to include in maintenance manuals.
 - 1. Include recommended methods and frequency of maintenance for maintaining optimum condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to plastic finishes and performance.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of impact-resistant wall protection units from single source from single manufacturer.
- B. Surface-Burning Characteristics: Provide impact-resistant, plastic wall protection units with surface-burning characteristics as determined by testing identical products per ASTM E 84, NFPA 255, or UL 723 by UL or another qualified testing agency.
- C. Provide the following upon request:
 - 1. Material Certificates: For each impact-resistant plastic material, from manufacturer.
 - 2. Material Test Reports: For each impact-resistant plastic material.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store impact-resistant wall protection units in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
 - 1. Maintain room temperature within storage area at not less than 70 deg F during the period plastic materials are stored.
 - 2. Store plastic wall protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 deg F.
 - a. Store corner-guard covers in a vertical position.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install impact-resistant wall protection units until building is enclosed and weatherproof, wet work is complete and dry, and HVAC system is operating and maintaining temperature at 70 deg F for not less than 72 hours before beginning installation and for the remainder of the construction period.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of impact-resistant wall protection units that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Deterioration of plastic and other materials beyond normal use.
 - 2. Warranty Period: Manufacturer's standard but not less than five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. PVC-Free Plastic: An engineered PETG or proprietary blend of high-performance materials that is free of PVC, phthalates, persistent bioaccumulative toxins (PBT) and bisphenol A (BPA) with UL Class A/1 fire rating; extruded and sheet material, thickness as indicated.
 - 1. Available Products: Subject to compliance with requirements, provide one of the following:
 - a. Construction Specialties, Inc. (C/S Group): Acrovyn 4000
 - b. IPC Door and Wall Protection Systems (a division of InPro Corporation); G2 BioBlend.
 - c. Korogard Wall Protection Systems (a division of RJF International Corporation); Korogard ETS.
- B. Aluminum Extrusions: Alloy and temper recommended by manufacturer for type of use and finish indicated, but with not less than strength and durability properties specified in ASTM B 221 for Alloy 6063-T5.
- C. Stainless-Steel Sheet: ASTM A 240/A 240M.
- D. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.
- E. Two-Sided Adhesive Tape: As recommended by protection product manufacturer.

- F. Adhesive: As recommended by protection product manufacturer.
 - 1. Verify adhesives have a VOC content of 70 g/L or less.
 - 2. Verify adhesive complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 CORNER GUARDS

- A. Surface-Mounted, Resilient, Plastic Corner Guards (CG-1 and CG-2): Assembly consisting of snap-on plastic cover installed over continuous retainer; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition.
 - 1. Cover: Extruded, rigid PVC-free plastic, minimum 0.078-inch wall thickness; as follows:
 - a. Profile: Nominal; minimal radius.
 - 1) CG-1: 3/4 inch wings
 - 2) CG-2: 1-1/2 inch wings
 - b. Height: 4 feet and full height to ceiling where indicated.
 - c. Color and Texture: As indicated.
 - 2. Top and Bottom Caps: Prefabricated, injection-molded plastic; color matching cover.
- B. Surface-Mounted, Metal Corner Guards (CG-3): Fabricated from one-piece, formed stainless steel with formed edges; with 90- or 135-degree turn to match wall condition.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Balco, Inc.
 - b. Construction Specialties, Inc.
 - c. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - d. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - e. WallGuard.com.
 - 2. Material: Stainless steel, Type 304.
 - a. Thickness: Minimum 0.0625 inch.
 - b. Finish: Directional satin, No. 4.
 - 3. Wing Size: Nominal 3-1/2 by 3-1/2 inches.
 - 4. Corner Radius: Approximately 1/8 inch.
 - 5. Mounting: Double-faced, adhesive foam tape or adhesive.

2.3 END-WALL GUARDS

- A. Surface-Mounted, Resilient, Plastic End-Wall Guard: Assembly consisting of snap-on plastic cover installed over continuous retainer or continuous retainer at each corner, with end of wall covered by semirigid, impact-resistant sheet wall covering to suit conditions; including mounting hardware.
 - 1. Match corner guards.
- B. Surface-Mounted, Metal, End-Wall Guards: Fabricated from one-piece, formed or extruded metal that covers entire end of wall; with formed edges.
 - 1. Match corner guards.

2.4 FABRICATION

- A. Fabricate impact-resistant wall protection units to comply with requirements indicated for design, dimensions, and member sizes, including thicknesses of components.

- B. Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.
- C. Fabricate components with tight seams and joints with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.

2.5 METAL FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Remove tool and die marks and stretch lines, or blend into finish.
 - 2. Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 3. Run grain of directional finishes with long dimension of each piece.
 - 4. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- B. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances, fire rating, and other conditions affecting performance of work.
- B. Examine walls to which impact-resistant wall protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
 - 1. For impact-resistant wall protection units attached with adhesive or foam tape, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Complete finishing operations, including painting, before installing impact-resistant wall protection system components.
- B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

- A. General: Install impact-resistant wall protection units level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
 - 1. Install impact-resistant wall protection units in locations and at mounting heights indicated on Drawings.
 - a. Corner Guards: Mount bottom above wall base.
 - 2. Provide splices, mounting hardware, anchors, and other accessories required for a complete installation.
 - a. Provide anchoring devices to withstand imposed loads.

- b. Where splices occur in horizontal runs of more than 20 feet, splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches.
- c. Adjust end caps as required to ensure tight seams.

3.4 CLEANING

- A. Immediately after completion of installation, clean plastic covers and accessories using a standard, ammonia-based, household cleaning agent.
- B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

END OF SECTION

SECTION 102800 - TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Washroom accessories.
 - 2. Custodial accessories.
 - 3. Underlavatory guards.
- B. Related Requirements:
 - 1. Section 092216 "Non-Structural Metal Framing" for sheet metal reinforcing for backing in metal stud partitions.

1.2 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
- B. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
 - 1. Identify locations using room designations indicated.
 - 2. Identify accessories using designations indicated.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For accessories to include in maintenance manuals.

1.5 WARRANTY

- A. Manufacturer's Special Warranty for Framed Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, visible silver spoilage defects.
 - 2. Warranty Period: 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Standard Requirements: Standard finish for washroom accessories shall be brushed stainless steel, unless otherwise indicated. Provide universally keyed locks and standard mounting fasteners. Provide minimum of six keys to Owner's representative.

2.2 TOILET AND CUSTODIAL ACCESSORIES

- A. Source Limitations: Obtain toilet accessories from single source from single manufacturer, unless otherwise indicated.
 - 1. Basis-of-Design Products: Subject to compliance with requirements, provide products indicated on Drawings or comparable product by one of the following:
 - a. American Specialties, Inc.; ASI Group.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
- B. Basis-of-Design Products: Refer to Toilet Accessories Schedule on Drawings.

2.3 UNDERLAVATORY GUARDS

- A. Underlavatory Guard:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Plumberex Specialty Products, Inc.
 - b. Truebro by IPS Corporation.
 - 2. Description: Insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
 - a. Basis-of-Design Products: Plumberex Pro-Extreme
 - 3. Material and Finish: Antimicrobial, molded plastic, white.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install accessories according to manufacturer's written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
- B. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested according to ASTM F 446.

3.2 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.
- C. Clean and polish exposed surfaces according to manufacturer's written instructions.

END OF SECTION

SECTION 104413 - FIRE PROTECTION CABINETS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fire-protection cabinets for the following:
 - a. Portable fire extinguishers.
- B. Related Requirements:
 - 1. Section 104416 "Fire Extinguishers" for portable, hand-carried fire extinguishers accommodated by fire-protection cabinets.

1.2 PREINSTALLATION CONFERENCE

- A. Preinstallation Conference: Conduct conference at Project site. Include Campus fire marshall.
 - 1. Review methods and procedures related to fire-protection cabinets, including, but not limited to, the following:
 - a. Schedules and coordination requirements.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing mounting method and relationships of box and trim to surrounding construction.
- B. Shop Drawings: For fire-protection cabinets.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
- C. Samples for Initial Selection: For each type of exposed finish required.
- D. Samples for Verification: For each type of exposed finish required, prepared on samples 6 by 6 inches square.
- E. Product Schedule: For fire-protection cabinets. Indicate mounting method and rating of wall. Coordinate final fire-protection cabinet schedule with fire-extinguisher schedule to ensure proper fit and function.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For fire-protection cabinets to include in maintenance manuals.

1.5 COORDINATION

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain fire-protection cabinets, accessories, and fire extinguishers from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E814 for fire-resistance rating of walls where they are installed.

2.3 FIRE-PROTECTION CABINET

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. J. L. Industries, Inc.; Activar Construction Products Group, Inc.
 - 2. Larsen's Manufacturing Company.
 - 3. Potter Roemer LLC; a Division of Morris Group International.
- B. Cabinet Construction: Nonrated and rated as indicated.
 - 1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.043-inch-thick cold-rolled steel sheet lined with minimum 5/8-inch-thick fire-barrier material. Provide factory-drilled mounting holes.
- C. Cabinet Material: Cold-rolled steel sheet
 - 1. Shelf: Same metal and finish as cabinet.
- D. Recessed Cabinet:
 - 1. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
- E. Semirecessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
 - 1. Square-Edge Trim: 1-1/4- to 1-1/2-inch (32- to 38-mm) backbend depth.
- F. Cabinet Trim Material: Same material and finish as door.
- G. Door Material: Steel sheet
- H. Door Style: Vertical duo panel with frame.
- I. Door Glazing: Tempered float glass (clear)
- J. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
 - 1. Provide recessed door pull and friction safety latch.
 - 2. Provide continuous hinge, of same material and finish as trim, concealed hinge pivot hinge manufacturer's standard hinge, permitting door to open 180 degrees.
- K. Accessories:

1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
2. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle
3. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. .
 - a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."
 - 1) Location: Applied to cabinet door cabinet glazing location indicated on Drawings.
 - 2) Application Process: Manufacturer's standard.
 - 3) Lettering Color: Black.
 - 4) Orientation: Vertical

L. Materials:

1. Cold-Rolled Steel: ASTM A1008/A1008M, Commercial Steel (CS), Type B.
 - a. Finish: Factory primed for field painting Baked enamel, TGIC polyester powder coat, HAA polyester powder coat, epoxy powder coat, or polyester/epoxy hybrid powder coat, complying with AAMA 2603.
 - b. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - c. Color: White.
2. Tempered Float Glass: ASTM C1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear).

2.4 FABRICATION

- A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
1. Weld joints and grind smooth.
 2. Miter corners and grind smooth.
 3. Provide factory-drilled mounting holes.
 4. Prepare for hardware installation in factory.
- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles.
1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
 2. Fabricate door frames of one-piece construction with edges flanged.
 3. Miter and weld perimeter door frames and grind smooth.

- C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's AMP 500, "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces of fire-protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish fire-protection cabinets after assembly.
- D. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare recesses for recessed fire-protection cabinets as required by type and size of cabinet and trim style.

3.3 INSTALLATION OF FIRE-PROTECTION CABINETS

- A. General: Install fire-protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.
- B. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.
 - 1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness is inadequate for recessed cabinets, provide semirecessed fire-protection cabinets.
 - 2. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.
 - 3. Fire-Rated Cabinets:
 - a. Install cabinet with not more than 1/16-inch tolerance between pipe OD and knockout OD. Center pipe within knockout.
 - b. Seal through penetrations with firestopping sealant as specified in Section 078413 "Penetration Firestopping."

3.4 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.
- E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 104413

SECTION 104416 - FIRE EXTINGUISHERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.
- B. Related Requirements:
 - 1. Section 104413 "Fire Protection Cabinets."

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site in conjunction with preinstallation meeting regarding fire protection cabinets. Include representatives of the Owner, Architect and governing fire authority.
 - 1. Review methods and procedures related to fire extinguishers including, but not limited to, the following:
 - a. Schedules and coordination requirements.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.
- B. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function. Use same designations indicated on Drawings.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

1.5 COORDINATION

- A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of hydrostatic test according to NFPA 10 when testing interval required by NFPA 10 is within the warranty period.
 - b. Faulty operation of valves or release levers.
 - 2. Warranty Period: Six years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. California Compliance: Comply with California Code of Regulations, Title 19, Division 1, Chapter 3 - Portable Fire Extinguishers
- B. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- C. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
 - 1. Provide fire extinguishers approved, listed, and labeled by FM Global.

2.2 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

- A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet mounting bracket indicated.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Activar Construction Products Group, Inc. - JL Industries.
 - b. Badger Fire Protection.
 - c. Guardian Fire Equipment, Inc.
 - d. Larsens Manufacturing Company.
 - e. Pyro-Chem; brand of Johnson Controls International plc, Building Solutions North America.
 - f. Strike First Corporation of America (The).
 - 2. Handles and Levers: Manufacturer's standard.
 - 3. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B, and bar coding for documenting fire-extinguisher location, inspections, maintenance, and recharging.
- B. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 1A:60-B:C, 10-lb 9.1-kg nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container; or
- C. Multipurpose Dry-Chemical Type in Aluminum Container: UL-rated A:60-B:C, 10-lb 9.1-kg nominal capacity, with monoammonium phosphate-based dry chemical in enameled-aluminum container.

2.3 MOUNTING BRACKETS

- A. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or red black baked-enamel finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fire extinguishers for proper charging and tagging.
 - 1. Remove and replace damaged, defective, or undercharged fire extinguishers.

3.2 INSTALLATION

- A. General: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.

END OF SECTION 104416

SECTION 105123 - PLASTIC-LAMINATE-CLAD LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Plastic-laminate-clad wood lockers.

1.2 ACTION SUBMITTALS

- A. Product Data Submittals: For each product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of locker.
- B. Shop Drawings: For plastic-laminate-clad wood lockers.
1. Include plans, elevations, sections, and attachment details.
 2. Show details full size.
 3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 4. Show locations and sizes of cutouts and holes for items installed in lockers.
 5. Show locker fillers, trim, base, sloping tops, and accessories.
 6. Show locker identification system and numbering sequence.
- C. Samples for Verification: For the following products:
1. Plastic-laminate-clad panels, not less than 8 by 10 inches, for each type, color, pattern, and surface finish.
 2. Thermally fused laminate-overlay-surfaced panels, not less than 8 by 10 inches, for each type, color, pattern, and surface finish.
 3. Exposed cabinet hardware and accessories, one unit for each type and finish.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- C. Provide the following upon request:
1. Qualification Data: For Installer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver lockers until painting and similar operations that could damage lockers have been completed in installation areas. If lockers must be stored in other-than-installation areas, store only in areas where environmental conditions are the same as those in final installation location, and comply with requirements specified in "Field Conditions" Article.

1.6 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install lockers until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.
- B. Field Measurements: Where lockers are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings.
 - 1. Locate concealed framing, blocking, and reinforcements that support lockers by field measurements before being enclosed, and indicate measurements on Shop Drawings.
- C. Established Dimensions: Where lockers are indicated to fit to other construction, establish dimensions for areas where lockers are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.7 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that lockers can be supported and installed as indicated.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of lockers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of locks or hardware.
 - c. Deterioration of wood, finishes, and other materials beyond normal use.
 - 2. Warranty Period: Three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions in CBC Title 24 Chapter 11B

2.2 PLASTIC-LAMINATE-CLAD WOOD LOCKERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Classic Woodworking, LLC.
 - 2. Club Resource Group.
 - 3. Famous Lockers.
 - 4. Hollman, Inc.
 - 5. Ideal Products, Inc.
 - 6. Legacy Lockers.
 - 7. List Industries Inc.
 - 8. Treeforms.
- B. Construction Style: Flush overlay.
- C. Final Assembly: Manufacturer's standard factory assembly.

- D. Locker Body: Fabricated from particleboard -core panels covered on both sides with thermally fused laminate overlay.
 - 1. Side Panels: Manufacturer's standard 3/4 or 5/8 inch thick.
 - 2. Back Panel: Manufacturer's standard 1/2 or 3/8 inch thick.
 - 3. Top Panel: Manufacturer's standard 3/4 or 5/8 inch thick.
 - 4. Bottom Panel: Manufacturer's standard 3/4 or 5/8 inch thick.
 - 5. Exposed Panel Edges: 1-mm-thick PVC.
- E. Plastic-Laminate-Clad Wood Doors: High-pressure decorative laminate, Grade VGS, over both sides of particleboard or medium-density-fiberboard core.
 - 1. Thickness: Manufacturer's standard 3/4 or 5/8 inch thick.
 - 2. Panel Edges: 1-mm-thick PVC.
- F. End Panels: Match style, material, construction, and finish of plastic-laminate-clad wood doors.
- G. Shelves: Fabricated from particleboard -core panels covered on both sides with thermally fused laminate overlay; fixed.
 - 1. Thickness: 5/8 inch.
 - 2. Exposed Edges: 3-mm-thick PVC.
- H. Corners and Filler Panels: 3/4-inch- thick panels. Match style, material, construction, and finish of plastic-laminate-clad wood doors.
- I. Continuous Finish Base: Plastic-laminate-clad, 3/4-inch- thick panel that matches door faces; fabricated in lengths as long as practical to enclose base and base ends of lockers.
- J. Continuously Sloping Tops: Plastic-laminate-clad, 3/4-inch- thick panel that matches door faces for installation over lockers with separate flat tops. Fabricate tops in lengths as long as practical, without visible fasteners at splice locations. Provide fasteners, supports, and closures, as follows:
 - 1. Closures: Hipped-end type.
 - 2. Sloping-top corner fillers, mitered.
- K. Plastic-Laminate Colors, Patterns, and Finishes:
 - 1. As selected by Architect from plastic-laminate manufacturer's full range of colors and patterns.

2.3 MATERIALS

- A. Certified Wood: Wood products shall comply with requirements of ASTM D7612-10 (FSC, SFI, ATSM, CSA or PEFC certifications are acceptable).
- B. Composite Wood: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
 - 1. Composite Wood Products: Products shall be made without urea formaldehyde.
 - 2. Thermally Fused Laminate (TFL) Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper.
 - 3. Medium-Density Fiberboard: ANSI A208.2, Grade 130.
 - 4. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.
- C. High-Pressure Decorative Laminate: ISO 4586-3, minimum grades as follows:
 - 1. Horizontal Surfaces: Grade HGS.
 - 2. Postformed Surfaces: Grade HGP.
 - 3. Vertical Surfaces: Grade VGS.

- D. Adhesives: Do not use adhesives that contain urea formaldehyde.
- E. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.
- G. Anchors: Material, type, size, and finish as required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- H. Wood Support Base: 2-by-4-inch nominal-size umber treated with manufacturer's standard preservative-treatment, pressure process.

2.4 HARDWARE

- A. Cam Padlock Hasp: Surface mounted, steel; finished to match other locker hardware.
- B. Frameless Hinges (European Type): Fully concealed, self-closing, nickel-plated steel, with not less than 125 degrees of opening.
 - 1. Provide two hinges for doors 36 inches high and less.
 - 2. Provide three hinges for doors more than 42 inches high.
- C. Knobs: Metal; back mounted; 1-inch- diameter, flat round or ball shape.
- D. Accessible Handle: Metal, fixed, graspable lever handle and rose trim; surface mounted.
- E. Shelf Rests: BHMA A156.9, B04013.
- F. Hooks: Manufacturer's standard, ball-pointed aluminum or steel; chrome finished. Attach hooks with at least two fasteners.
- G. Exposed Hardware Finish:
 - 1. Satin chrome unless otherwise indicated.

2.5 ACCESSORIES

- A. Number Identification Plates: 1-1/2-inch- diameter, etched, embossed, or stamped, stainless steel plates with black numbers and letters at least 1/2 inch high. Identify lockers in sequence indicated on Drawings.

2.6 FABRICATION

- A. Fabricate each locker with shelves, an individual door and frame, an individual top, a bottom, and a back, and with common intermediate uprights separating compartments.
 - 1. Fabricate lockers to dimensions, profiles, and details indicated.
 - 2. Ease edges of corners of solid-wood members to 1/16-inch radius.
- B. Fabricate lockers square, rigid, without warp, and with finished faces flat and free of dents, scratches, and chips. Accurately factory machine components for attachments. Make joints tight and true.
 - 1. Fabricate lockers using manufacturer's standard construction, with joints made with dowels, dados, or rabbets. Dado side panels to receive shelving except where indicated to be adjustable.

2. Fabricate lockers with joints that are dadoed or rabbeted, glued full length, and stapled. Dado side panels to receive shelving except where indicated to be adjustable.
- C. Accessible Lockers: Fabricate as follows:
1. Locate bottom shelf no lower than 15 inches above the floor.
 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches above the floor.
- D. Venting: Fabricate lockers with space between doors and locker assembly of not less than 1/4 inch.
- E. Number Identification Plates: Inlay number plates flush in each locker door, near top, centered.
- F. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
1. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that the parts fit as intended, and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
 2. Use only manufacturer's nuts, bolts, screws, and other devices for assembly.
- G. Shop cut openings, to maximum extent possible, to receive hardware, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- H. Attach PVC edging to panels by thermally fusing edging to panels after panel fabrication.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and floors or support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify that furring is attached to concrete and masonry walls that are to receive lockers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Condition lockers to average prevailing humidity conditions in installation areas before installation.
- B. Before installing lockers, examine factory-fabricated work for completeness and complete work as required, including removal of packing.

3.3 INSTALLATION

- A. Install wood support base with 1/2-inch- thick, plywood top.
- B. Install lockers level, plumb, and true; use concealed shims.
- C. Connect groups of lockers together with manufacturer's standard fasteners, through predrilled holes, with no exposed fasteners on face frames. Fit lockers accurately together to form flush, tight, hairline joints.

- D. Install lockers without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings, providing unencumbered operation. Complete installation of hardware and accessory items as indicated.
 - 1. Installation Tolerance: No more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line. Shim as required with concealed shims.
- E. Locker Anchorage:
 - 1. Fasten lockers through back, near top and bottom, at ends with No. 8 pan-head sheet metal screws through metal backing or metal framing behind wall finish and spaced not more than 16 inches o.c.
- F. Scribe and cut corner and filler panels to fit adjoining work using fasteners concealed where practical. Repair damaged finish at cuts.
- G. Attach sloping-top units to lockers, with end panels covering exposed ends.
- H. Install number identification plates after lockers are in place.
 - 1. Attach number identification plate on each locker door, near top, centered, with at least two screws with finish matching the plate.

3.4 ADJUSTING

- A. Clean, lubricate, and adjust hardware. Adjust doors to operate easily without binding. Verify that integral locking devices operate properly.

3.5 PROTECTION

- A. Protect lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
- B. Touch up marred finishes, or replace lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION 105123

SECTION 107123 - EXTERIOR SUN CONTROL DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel canopy with horizontal aluminum airfoil sunshades.
 - 2. Vertical-mounted aluminum airfoil sunshades in aluminum frame.
- B. Related Requirements:
 - 1. Section 051200 "Structural Steel Framing" for structural steel supports.
 - 2. Section 055000 "Metal Fabrications" for miscellaneous steel supports and bracing.
 - 3. Section 099600 "High-Performance Coatings" for painting of canopy steel support structure.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's data sheets for each product and assembly specified.
- B. Shop Drawings: Submit documentation that illustrates sections and details showing profiles, spacing of components, frames and anchors.
 - 1. Include layout, spacings, sizes, thicknesses, and types of metal support framing and attachment to structure; fabrication; and fastening and anchorage details, including mechanical fasteners.
 - 2. Indicate supplemental framing, accessories, connection details, and attachment to adjoining work.
- C. Samples for Initial Selection: For each component where color and finish are indicated to be selected by Architect.
- D. Samples for Verification: For each finish and color indicated, two samples representing actual finishes specified.

1.3 QUALITY ASSURANCE

- A. Fabricator: Canopy systems shall be fabricated by a firm with a minimum of 5 years of experience in the design, engineering and fabrication of similar systems.
- B. Installer: Fabricator of canopy.
- C. Welding Qualifications: Qualify procedures and personnel according to the following as applicable:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Provide the following upon request:
 - 1. Qualification Data: For fabricator.
 - 2. Welding certificates.
 - 3. Product Test Reports: For each manufactured product and component, for tests performed by a qualified testing agency, including, but not limited to the following:
 - a. Brackets
 - b. Blades.
 - c. Mechanical fasteners.
- E. Mock-Up: Build freestanding mockup to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Erect mockup, approximately 100 sq. ft. using full size components. At a minimum, include finished steel columns, and steel frame with louver sunshades.
2. Provide units finished as specified.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and handle materials and products in compliance with manufacturer's instructions and recommendations and industry standards.
- B. Store products indoors in manufacturer's or fabricator's original containers and packaging, with labels clearly identifying product name and manufacturer. Protect from damage.

1.5 SEQUENCING AND SCHEDULING

- A. Field Measurements: Locate support structure and locations of connections to adjacent construction by field measurements before fabrication. Indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 1. Established Dimensions: Where field measurements cannot be taken without delaying the Work, establish dimensions and proceed with fabricating products without field measurements, taking responsibility for any field adjustments required for installation. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.6 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

1.7 WARRANTY

- A. Special Finish Warranty, Factory-Applied Aluminum Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Canopies shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of metal components, noise or metal fatigue caused by airfoil-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
 1. Wind and Seismic Loads: Determine loads based on pressures as indicated on Drawings.
- B. Seismic Performance: Canopies shall withstand the effects of earthquake motions determined according to ASCE/SEI7.

- C. Canopies shall be designed to perform under conditions specified herein or required by site conditions with no permanent damage to or deforming of the blades or sunshade assembly, noise or metal fatigue caused by blade rattle or flutter, or permanent damage to fasteners and anchors.
 - 1. Wind Loads: Determine loads based on pressures as indicated on Drawings.
 - 2. Analysis of Blade Deflection to be limited to L/120, 3/4 inch, as indicated on structural drawings, or as required by code, whichever is most stringent.
- D. Canopies shall be installed to withstand wind and seismic loads, acting upwards and downwards.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SUN CONTROL DEVICES

- A. Louvered Sunshades: (LOU-1)
 - 1. Manufacturer: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. B&C Industrial Group, Inc.
 - b. Construction Specialties, Inc. (C/S Group)
 - c. DAMS, Inc.
 - d. Ruskin
 - 2. Basis-of-Design Products:
 - a. Construction Specialties, Inc.; CS Linear Sunshade System: Airfoil system mounted horizontally and vertically as indicated.
 - 3. Blade Shape: Airfoil
 - 4. Blade Material: Extruded aluminum.
 - a. Finish: Louver manufacturer's standard high-performance organic fluoropolymer coating.
 - 5. Blade Material Thickness: Not less than required by performance requirements.
 - 6. Blade Size: 10 inch high by 1 inch wide
 - 7. Blade Direction: As indicated on Drawings.
 - 8. Blade Mounting Angle: As indicated on Drawings.
 - 9. Structural Supports: Galvanized steel tubes per structural drawings.
 - a. Finish: High-performance paint according to Section 099600 "High-Performance Coatings."
 - 10. Fascia: As indicated.
 - 11. Mounting: Mechanically attached blades to steel angles welded to steel support framing designed to withstand performance requirements indicated. Louvers mechanically attached at angle indicated to galvanized steel angles. Angles welded to structural steel. Provide manufacturers standard attachments, brackets, tabs and fasteners, designed to withstand performance requirements indicated.

2.3 STEEL CANOPY FRAMING

- A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Structural Steel Tubes, Plates, Shapes, and Bars: Refer to Structural Drawings.
 - 1. Exposed steel shall be hot-dipped galvanized.

2.4 ALUMINUM

- A. Fabricate products from alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
- B. Aluminum Extrusions: ASTM B 221,
 - 1. Non-structural architectural extrusions: Alloy 6063-T5 or T6, as standard with manufacturer.
 - 2. Structural extrusions: Alloy 6061-T6.

2.5 MISCELLANEOUS MATERIALS AND FASTNERS

- A. Aluminum Fasteners: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for use with aluminum components. Select fasteners for type, grade, and class required and capable withstanding design loads.
- B. Steel Frame Bolts, Fasteners and Anchors, General: Refer to Structural Drawings.
- C. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.

2.6 FABRICATION

- A. Maintain equal blade spacing to produce uniform appearance.
- B. Include supports, anchorages, flashings, and accessories required for complete assembly.

2.7 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

- A. Aluminum Extrusions and Accessories:
 - 1. High-Performance Organic Finishes:
 - a. Two- or Three- Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat (Three-coat) as applicable. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. Color: As selected by Architect from louver manufacturer's standard colors and finishes, including micas and metallics.

2.9 STEEL AND IRON FINISHES

- A. Galvanized Steel:
 - 1. Prepare steel for galvanizing according to Section 099600 "High-Performance Coatings."
 - 2. Hot-dip galvanize steel canopy components indicated, including hardware, after fabrication.
 - 3. Comply with ASTM A123/A123M for hot-dip galvanized steel canopy components.

4. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
 5. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 6. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. Preparing Galvanized Steel for Finishing: After galvanizing, thoroughly clean galvanized steel components of grease, dirt, oil, flux, and other foreign matter using surface preparation standard SSPC-SP 16 "Brush-Off Blast Cleaning."
- C. Primer Application: Apply vinyl wash primer to prepared galvanized steel surfaces. Comply with requirements in SSPC-PA 1 for shop painting.
- D. Shop-Painted Finish: Comply with Section 099600 "High-Performance Coatings."
1. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1 for shop painting. Apply at spreading rates recommended by coating manufacturer.
 - a. Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and structural support, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.
- C. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

- A. Locate and place canopy structure and louver sunshades level, plumb, and at indicated alignment with adjacent work.
- B. Install louvers according to manufacturer's instructions and approved Shop Drawings.
- C. Isolate aluminum from ferrous and zinc-coated metal with two coats of bituminous paint, flexible flashing tape or non-metal washers or gaskets.
- D. Use concealed anchorages where possible. Provide isolation washers fitted to screws where required to protect metal surfaces from galvanic corrosion.

3.4 ADJUSTING AND CLEANING

- A. Clean exposed canopy and sunshade surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.

- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore sunshades damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

3.5 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 108113 - BIRD CONTROL DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bird wire system.
 - 2. Bird netting.
- B. Related Requirements:
 - 1. Section 033000 "Cast-in-Place Concrete" for concrete substrates for bird control devices.
 - 2. Section 051200 "Structural Steel Framing" for structural-steel framing system components and substrate for bird control devices.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For bird control systems. Include plans, elevations, sections, details, and attachments to other work.
- C. Samples:
 - 1. Bird Wire System: Full size samples of each type of base with posts attached to wire.
 - 2. Other samples: Only when requested.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle packaged materials in original containers with seals unbroken and labels intact until time of use.
- B. Store items in clean, safe, dry area.

1.4 COORDINATION

- A. Coordinate Work of this Section with related work.
- B. Schedule Work of this Section to occur after adjoining work has been completed, including finishing and installation of sealants.

PART 2 - PRODUCTS

2.1 BIRD WIRE

- A. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Bird Barrier America, Inc.; Birdwire System.
 - 2. Bird-B-Gone; Bird Wire 2000.

- B. Description: Bird control system consisting posts and wires that provide an unstable landing area for pigeons, seagulls, and larger birds.
- C. Components:
 - 1. Wire: Seven-strand, stainless steel wire, coated with clear ultraviolet stabilized nylon.
 - 2. Base with Posts: Manufacturer's standard stainless steel base, designed for glue-on installation.
 - 3. Glue: As recommended by manufacturer.
 - 4. Spring: Stainless steel, sized as required.
 - 5. Crimps: Nickel plated copper.

2.2 BIRD NETTING

- A. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Bird-B-Gone; Bird Net 2000.
- B. Description: Bird netting system including net and mounting/anchoring accessories.
- C. Components:
 - 1. Bird Net: Heavy-duty net, UV stabilized, rot proof and water proof; flame resistant.
 - a. Mesh Size: 3/4 inch.
 - 2. Mounting Accessories: Provide complete mounting accessories consisting of, but not limited to eyebolts, straining wire, ferrules, turnbuckle, hog rings, anchor rivets with split pin, and cable bracket.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive bird control devices before installation.
- B. Field-verify dimensions and suitability of substrates for anchoring.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's recommendations and approved shop drawings.
- B. Bird Wire:
 - 1. Install end and intermediate base posts using glue. Do not use screws or drill holes into substrate. Location, number of rows, and spacing shall be as recommended by manufacturer. Intermediate posts shall be no more than 5 feet apart.
 - 2. Allow glue to set and cure thoroughly before installing wire.
 - 3. Install wire in lengths no more than 10 feet per section of wire. Terminate each section with spring. Next wire section may continue from the same post.
- C. Bird Netting:
 - 1. Mechanically fasten eyebolts, anchor rivets, and cable brackets. Adjust eyebolts, anchors, and cable brackets to maintain the recommended gap between the straining wire and the building structure.
 - 2. Loop end of straining wire through eye bolt and fasten using two ferrules.
 - 3. Loop other end of straining wire to turnbuckle. Attach to eye bolt and twist turnbuckle to apply tension.

4. Install netting to straining wire using hog rings. Stretch netting as recommended by manufacturers.

3.3 PROTECTION

- A. Protect Work from damage.
- B. Replace damaged or defective Work.

END OF SECTION

SECTION 112183 – PHOTO PROCESSING SINKS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Photo Processing Sinks
 - a. Room 15101 - MQ.06
 - b. Room 15101A - MQ.05
 - c. Room 15101B - MQ.11
- B. Related Requirements:
 - 1. Section 123553 "General Requirements for Laboratory / Arts Casework and Fume Hoods" for references, coordination, submittal requirements, quality assurance, materials, hardware, finishes, service fixtures, installation, etc.
 - 2. Section 123553.26 Solid Phenolic Resin Photography Casework.
 - 3. Division 22: Furnishing and installation of plumbing utilities and final connections to photo processing sinks and equipment.
 - 4. Division 23: Furnishing and installation of vent hood and exhaust duct work and equipment and final connections to photo processing sink vent hoods.
 - 5. Division 26: Furnishing and installation of electrical utilities and final connections to photo processing sink equipment.

1.2 QUALITY ASSURANCE

- A. Single source responsibility: All systems and components, which comprise photo processing sinks and accessories, shall be designed, fabricated and assembled by a single manufacturer.
- B. Manufacturer's qualifications: Modern plant with proper tools, dies, fixtures and skilled workers to produce high quality, photo processing sinks and accessories, and shall meet the following minimum requirements:
 - 1. Ten years or more experience in manufacture of the type of equipment specified.
 - 2. Ten installations of equal or larger size and requirements.
- C. Installer's Qualifications: Factory trained and/or certified by the manufacturer.

1.3 REFERENCES

- A. The following industry, association and government codes and standards are cited in this Section. They shall be followed as applicable to the design, fabrication, assembly and testing of the specified equipment.
 - 1. American National Standards Institute (ANSI).
 - 2. American Society for Testing and Materials (ASTM).
 - 3. American Welding Society (AWS).
 - 4. Federal Occupational Safety and Health Act (OSHA).
 - 5. National Electric Code (NEC).
 - 6. National Electric Manufacturers Association (NEMA).
 - 7. National Fire Protection Association (NFPA).
 - 8. Underwriters Laboratory, Inc. (UL), for electrical safety and integrity.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products on the site in such a manner as to minimize the risk of damage, decay, deterioration or loss from theft.

- B. All products shall be delivered to the job site in manufacturer's original unopened containers, crates or protective wrappings with the manufacturer's name and address clearly labeled thereon.
- C. Schedule delivery of equipment so that spaces are sufficiently complete that equipment can be installed immediately following delivery.
- D. Accept products on site and inspect on arrival for damage.
- E. Protect finished surfaces from soiling or damage during handling and installation. Keep covered with polyethylene film or other protective coating.

1.5 PROJECT CONDITIONS

- A. Do not deliver or install equipment until the following conditions have been met.
 - 1. Windows and doors are installed and the building is secure and weathertight.
 - 2. Ceiling, overhead ductwork and lighting are installed.
 - 3. All painting is complete and flooring is installed.

1.6 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 013300 "Submittal Procedures."
- B. Product Data: Submit manufacturer's data for each item of equipment specified. Include dimensions, configurations, construction details, and attachments. Indicate location, size, and service requirements for each utility connection.
- C. Shop Drawings: Provide large scale plans and sections showing rough-in and anchor placements, clearances, and location of utilities for coordination with other trades.
 - 1. Indicate details for anchoring sinks to permanent building construction including locations of blocking and other supports. Include calculations demonstrating that anchorages comply with seismic performance requirements.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Manufacturer's operating and maintenance manuals.

1.8 COORDINATION

- A. The supplier/installer shall coordinate the installation of all products under this section and shall coordinate the installation and rough-in sizes and locations for all utilities required with the appropriate trades.

1.9 WARRANTY

- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design and installation of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required. Coverage of warranty includes but is not limited to the following:
 - 1. Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 1 year from date of Substantial Completion.

- B. Installer's Warranty: Furnish installer's written workmanship warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 1 year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PHOTO PROCESSING SINKS

- A. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers/fabricators offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
 - 1. Basis of Design: Sebastian Darkroom Products a Division of California Stainless MFG., Inc..
- B. Acceptable Manufacturers/Fabricators and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers/fabricators listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures":
 - 1. Sebastian Darkroom Products a Division of California Stainless MFG., Inc.
 - 2. Or Equal, No Known Equal
- C. Size: As scheduled and detailed on the Drawings.
- D. Service Requirements: As scheduled and detailed on the drawings.
- E. Construction:
 - 1. Each sink unit completely assembled and consists of the sink, sink base cabinet(s), pre-piped fittings, service fixtures, thermostatic water blenders, chillers, and filtration equipment and vent hood / shelf. .
 - 2. Fabricate from 16 gage, Type 304 stainless steel with a Number 4 finish. Provide 1 inch radius cove at vertical and horizontal corners and pitch bottom to drain(s). All sink joints to be butt welded, ground smooth and polished to render all joints seamless. Soldering will not be permitted in conjunction with sink unit construction. Provide all sink units designed and fabricated with sufficient reinforcement to prevent oil canning. Apply heavy mastic type sound deadening coating to underside of sinks, backsplashes, and sidesplashes covering a minimum of 80 percent of the affected surface area. Fixture holes to be reinforced with a continuous 14 gage hat channel.
 - 3. Provide with stainless-steel open-end overflow standpipe, strainer, and tailpiece. Standpipe to be 2 inches taller than bottom of sink.
 - 4. Include the following accessories as detailed on the drawings:
 - a. Temperature Blender: HydroGuard thermostatic water blender with strainer-check-stops, lever handle and 3 inch dial thermometer.
 - b. Water Filters: 20 micron incoming water filters mounted on a PVC panel with shut-off valves, spanner wrench and 3/4 inch unions. Provide one filter for incoming hot water and one filter for incoming cold water.
 - c. Tempered Water Faucets. Panel mounted TW/1 (refer to Service Fixture Schedule)
 - d. Eye Wash: Panel mounted swing down eye wash EW/1 and panel mounted swing-away eye wash EW/2 (refer to Service Fixture Schedule).
 - e. Flushing Rinse.

5. Chiller: Optional pending testing of water temperature during the height of summer months to confirm incoming water temperature remains consistently 62 degrees Fahrenheit or below. If needed provide each sink unit with an water-cooled water chiller. Chiller to chill 28 gallons per hour at 50 degree Fahrenheit based on incoming water at 80 degrees Fahrenheit. Chiller installation shall include piping and changeover valves, controls (refer to mechanical controls), and electrical connections.
6. Vent Hood: Provide gray polyvinyl chloride PVC vent hood with integral shelf over each sink.
 - a. Hood at wall sink to be supported by the wall.
 - b. Hood at walk-around sink to be supported by the sink and from the ceiling.
 - c. Vent stacks to be 8 inches in diameter. Include adjustable dampers with locking quadrants in each stack for on-site air balancing.
 - d. Vent stack to extend to 4 inches above the ceiling.
 - e. Dampers to be located just below the ceiling with damper handle swinging down (away from the ceiling) for open position.
 - f. Shelf to be a minimum of 10 inches deep with side splashes and front retainer lips.
7. Provide escutcheons on all duct, piping, controls, power, and structural support systems that penetrate the ceiling. Seal all floor penetrations.
8. Additional Requirements: No stickers or markings shall be on visible portions of the sinks, including the vent stacks, dampers, and shelves.
9. Refer to Section 123553.26 for base cabinets.
10. Refer to Section 123553 for service fixtures.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify equipment rough-in before proceeding with the work in this section.
- B. Coordinate with other trades for the proper and correct installation of plumbing and electrical rough-in, and structural backing for items attached to walls required for the installation of products in this section.
- C. Examine surfaces and conditions to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to the following, unless otherwise specified:
 1. Respective manufacturer/fabricator's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.
- B. Deliver to job site, uncrate, place in location, and assemble all equipment specified herein. Remove all debris and crating materials.
- C. Install equipment in strict accordance with the manufacturer's recommendations, including maintaining recommended operating and servicing clearances.
- D. Provide shutoff valves in all utility supply piping to the units.
- E. Sequence installation to ensure utility connections are achieved in an orderly and expeditious manner.

- F. Anchor equipment securely in place with a seismic tie-down kit, in accordance with design calculations and requirements..

3.3 SUPERVISION AND STARTUP

- A. Provide the services of the manufacturer's factory trained field representative to inspect and provide written approval of the installation.
- B. Include the services of the manufacturer's representative to start up and test the equipment. The manufacturer shall certify in writing that the equipment is operating according to specifications.

3.4 CLEANUP, MAINTENANCE, ADJUSTING AND DEMONSTRATION

- A. At completion, clean all surfaces thoroughly using no cleaners, which will harm adjacent surfaces.
- B. Protect all equipment and surfaces from damage and replace all damaged items.
- C. Adjust operating equipment to efficient operation for its intended use, and as required by the manufacturer.
- D. Include the services of the manufacturer's representative to instruct the Owner's operating personnel in the proper care and operation of the units.

3.5 PROTECTION OF FINISHED WORK

- A. Provide all necessary protective measures to prevent damage to equipment from exposure to other construction activity

END OF SECTION

SECTION 115213 - PROJECTION SCREENS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes
 - 1. Motorized front projection screens.
- B. Related Requirements:
 - 1. Section 055000 "Metal Fabrications": Suspension systems for projection screens.
 - 2. Section 095100 "Suspended Acoustical Ceilings."
 - 3. Division 26 for electrical wiring, connections, and installation of remote control switches for electrically operated projection screens.

1.2 SUBMITTALS

- A. Product Data: Manufacturer's data sheets on each product to be used, including:
 - 1. Preparation instructions and recommendations.
 - 2. Storage and handling requirements and recommendations.
 - 3. Installation methods.
- B. Shop Drawings: Shop drawings showing layout and types of projection screens. Show the following:
 - 1. Location of screen centerline.
 - 2. Seams in viewing surfaces.
 - 3. Detailed drawings for concealed mounting.
 - 4. Connections to suspension systems.
 - 5. Anchorage details.
 - 6. Accessories.
 - 7. Frame details.
 - 8. Wiring diagram for electrically operated units.
- C. Certificate of Environmental Compliance: Documentation indicating fabrics meet or exceed the following field-validated standards set by UL GREENGUARD Environmental Institute (GEI) program for products and materials with low chemical and particle emissions for indoor usage.
- D. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.
- E. Verification Samples: For each finish product specified, two samples, minimum size 6 inches square, representing actual product, color, and patterns.

1.3 QUALITY ASSURANCE

- A. Single Source Responsibility: Obtain each type of projection screen required from a single manufacturer as a complete unit, including necessary mounting hardware and accessories.
- B. Coordination of Work: Coordinate layout and installation of projection screens with other construction supported by, or penetrated through, ceilings, including light fixtures, HVAC equipment, fire suppression system and partitions.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver projection screens until building is enclosed for new construction, or demolition complete, and debris removed if it is a renovation.
- B. Deliver in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Inspect screens for freight damage, concealed or otherwise, upon delivery to project site. Report damage to freight carrier immediately for replacement of fixed projection screens.
- D. Store in manufacturer's unopened packaging until ready for installation.
- E. Protect screen surfaces from damage during delivery and storage and installation from abrasion, dust and other conditions.

1.5 COORDINATION

- A. Coordinate work with installation of ceilings, walls, electric service power characteristics, and location.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Basis Of Design
 - 1. Draper, Inc.; 411 South Pearl Street; Spiceland, IN 47385-0425; Phone 765.987.7999; www.draperinc.com
 - 2. LegrandAV (Da-Lite); 3100 North Detroit Street; Warsaw, IN, 46582; Phone 866.977.3901; www.legrandav.com/products/da-lite
- B. Other Acceptable Manufacturers
 - 1. Screen Innovations; 9715 Burnet Rd #400, Austin, TX 78758; 512.832.6939; www.screeninnovations.com
 - 2. DNP; RP Visual Solutions, 1275 S. Lewis St, Anaheim, CA, 92805; 714.991.6405; www.dnp-screens.com
 - 3. Stewart Filmscreen; 1161 Sepulveda Blvd; Torrance, CA 90502; 800.762.4999; www.stewartfilmscreen.com

2.2 MOTORIZED FRONT PROJECTION SCREENS

- A. Draper
 - 1. Basis-of-Design Product: Access V

- a. Electric motor operated, steel case. Ceiling-recessed, 18-gauge steel headbox, 7-3/8 inches high x 8-1/16 inches deep, including trim flanges with white paint finish and stamped 13-gauge steel end caps. UL approved "Suitable for use in environmental air space." Bottom closure panel forms slot for passage of viewing surface and can be released to hang down or be removed for access to operating mechanism and viewing surface. Bottom perimeter flange provides support and trim for acoustical ceiling panels and trim for gypsum board ceiling. Access case may be ordered in advance and the screen installed later to eliminate field damage. Screen installs in minutes. Housing is symmetrical allowing for left (standard) and right (optional) hand motor locations and for viewing surface to unroll off front or back of roller. Steel mounting brackets slide in extruded aluminum mounting system along top of case. Brackets supporting roller/fabric assembly slide in tracks inside top of the case, allowing viewing surface to be centered in case. Steel leveling brackets are attached to case to prevent deflection. Housing designed with internal junction box and plug-in wiring connections to allow housing to be installed and connected to building power supply separately from motor and viewing surface.
 - 1) Motor
 - a) Motor mounted inside screen roller on rubber isolation insulators. Motor UL certified, rated 110-120V AC, 60 Hz, three wire, instantly reversible, lifetime lubricated with pre-set accessible limit switches. Motor shall be left mounted (standard).
 - b) Quiet Motor mounted inside screen roller on rubber isolation insulators. Motor operates at 44db and is UL certified, rated 110-120V AC, 60 Hz, three wire, instantly reversible, lifetime lubricated with pre-set accessible limit switches. Motor shall be left mounted (standard).
 - 2) Viewing Surface
 - a) Draper TecVision XT1100X White - on axis gain of 1.1. 180 degree viewing cone.
 - b) Black Backing
 - c) Black Drop: As needed to align bottom of screen 30 inches above finished floor.
 - 3) Tab-Tensioning System
 - a) Viewing surface with integrated tabs and cable on each side of fabric to provide tension and ensure flat viewing surface. Viewing surface and tabs CNC cut as a single piece. Tabs RF welded to the back of viewing surface to prevent tab separation. Tab adhesives are not acceptable. Viewing surface inserted into aluminum bottom dowel.
 2. Screen Controls
 - a. General: All controls are UL Certified.
 - 1) Low voltage control unit with three button 24V switches and cover plate to stop or reverse screen at any point, built-in RF receiver, built-in Video Interface Control trigger for 3V-28V, RS232, and dry contact relays.
- B. Da-Lite
1. Basis-of-Design Product: Tensioned Advantage
 - a. Ceiling Recessed electrically operated, UL and ULC listed, retractable, with rigid metal roller and tab guide cable screen tensioning system.
 - 1) Motor: Housed inside metal roller. Includes automatic thermal overload protection, integral gears, capacitor and electric brake to prevent coasting, and preset, adjustable limit switches to automatically stop viewing surface in the UP or DOWN positions.
 - a) Type: 3-wire, permanently lubricated, reversal type designed for mounting inside roller and to suit project requirements.

- b) Voltage, Frequency: 115 V, 60 Hz.
 - c) Amperage: 2.4 amps maximum.
 - 2) Screen Mounting: Ceiling Recessed with Trim Kit.
 - 3) Screen Case: Designed to receive mounting hardware and sized to suit projection screen.
 - a) Material: Extruded aluminum.
 - b) Design: 2-piece with curved contour flat-backed style with heavy-duty end caps concealing roller ends.
 - c) Finish: Powder coated white.
 - 4) Viewing Surface
 - a) Permanently attached to roller.
 - b) HD Progressive 0.9 - on axis gain of 0.90. 170 degree viewing cone. GREENGUARD Gold certified.
 - c) Black Backing
 - d) Black Drop: As needed to align bottom of screen 30 inches above finished floor.
 - 5) Tab Guide Cable Tensioned Screen Material:
 - a) Include tab and cable guide on each side of fabric to maintain even, lateral tension and hold viewing surface flat.
 - b) Bottom end of fabric to be inserted into a custom aluminum slat bar with added weight to provide vertical tension on the screen surface.
 - c) Slat ends to be protected by heavy-duty plastic caps enclosing a preset adjustable mechanism for screen tensioning.
 - 6) Installation Hardware: Fasteners and other components of type, size and spacing recommended by manufacturer for complete, functional and secure installation of electric screen.
 - 7) Closure Door
 - a) Screen shall include a second motor 120V (60Hz) 1.2 Amp.
 - b) The door will lift to the closed position where a micro switch shall cut off the electrical current to the door motor
2. Screen Controls
- a. Silent Motor with Integrated Low Voltage Control System (LVC)
 - b. Switch: 3 position type with cover plate for UP, DOWN and STOP functions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. Verify rough-in openings are properly prepared.
- C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

- A. Install projection screens at locations indicated to comply with the manufacturers written instructions.
- B. Install projection screens with screen cases in position and in relationship to adjoining construction as indicated. Securely anchor to supporting substrate in a manner that produces a smoothly operating screen with vertical edges plumb and viewing surface flat when the screen is in the lowered position.
- C. Site-assemble screen frames, stretch viewing surface over frame and attach with attachment system. Exercise care to ensure viewing surface is not soiled or damaged and that surface is taut.
- D. Test electrically operated units to verify that the screen, controls limit switches, closure, and other operating components are in optimum functioning.

3.4 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion

END OF SECTION

SECTION 115300 - MISCELLANEOUS LABORATORY EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cabinet, Tall Corrosive and Base Storage.
2. Cabinet, Tall Flammable Storage.
3. Drying Rack.
4. Drying Rack, Bench Top Mounted.
5. Ice Machine, Upright.
6. Point Exhaust.
7. Point Exhaust, Atomic Absorption Unit.
8. Sink, Hand Wash.
9. Backdrop Organizer
10. Built-in Transparency Viewer with Control Box
11. Overhead Single-Head Light with Camera
12. Goggle Storage , Wall mounted
13. Single Adjustable Monitor Arm
14. Dual Adjustable Monitor Arm

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for furnishing and installation of metal fabrications to casework and accessory equipment.
2. Section 092216 "Non-Structural Metal Framing" for furnishing and installation of non-structural metal framing to casework and accessory equipment.
3. Division 22: Furnishing and installation of plumbing utilities and final connections to accessory equipment.
4. Division 23: Furnishing and installation of exhaust ductwork and equipment, and final connection to exhaust devices.
5. Division 26: Furnishing and installation of electrical utilities and final connections to casework and accessory equipment.

1.2 REFERENCES

A. Items specified as a part of this section must conform, where applicable, to the following standards.

B. American National Standards Institute (ANSI)

1. ANSI/UL 3101-1 – Electrical Equipment for Laboratory Use; Part 1: General Requirements

C. Underwriters Laboratories, Inc. (UL)

1. 1262 – Laboratory Equipment

D. American Society for Testing Materials (ASTM)

1. ASTM A167 for Stainless Steel, Alloy 302 or 304.
2. ASTM E84 for Burning Characteristics of Building Materials.
3. ASTM MT1010 for Support Columns

E. NSF International (NSF)

1. Standard #49.

1.3 ACTION SUBMITTALS

- A. Product Data: Submit manufacturer's data for each component and item of laboratory equipment specified. Include component dimensions, configurations, construction details, joint details, and attachments. Indicate location, size and service requirements for each utility connection.
- B. Shop Drawings: Include the following:
 - 1. Location of assemblies in each room and layout for roughing-in, including utility connections and related diagrams.
 - 2. Details of fabrication and installation.
 - 3. Dimensional locations for rough-in of mechanical and electrical services.
 - 4. Model numbers indicated in this section to include all standard features listed in latest catalog or Website at date of submittal.
 - 5. Indicate details for anchoring equipment to permanent building construction including locations of blocking and other supports. Include calculations demonstrating that anchorages comply with seismic performance requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Manufacturer's operating and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Manufacturer shall have at least 5 years' experience in the fabrication of the specified equipment and shall have 10 installations of equal or larger size.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Schedule delivery of equipment so that spaces are sufficiently complete that material can be installed immediately following delivery.
- B. Handling: Protect finished surfaces from soiling or damage during handling and installation. Keep covered with polyethylene film or other protective coating through-out the remainder of construction.

1.7 FIELD CONDITIONS

- A. Do not deliver or install equipment until the following conditions have been met:
 - 1. Windows and doors are installed and the building is secure and weathertight.
 - 2. Ceiling, overhead ductwork, and lighting are installed.
 - 3. All painting is completed and flooring is installed.
- B. Field Measurements: Take field measurements to verify or supplement dimensions indicated. Be responsible for accurate fit of the Work. Verify that all equipment in this section is coordinated to provide a complete working process and system integration.

1.8 WARRANTY

- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design and installation of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Manufacturer shall warrant the products to be free from material and labor defects for a period of 1 year from date of operational acceptance by the Using Agency.

2. Date of operational acceptance shall be after factory check, test and start-up services is complete, the unit is operating in a satisfactory manner, and the equipment has been satisfactorily commissioned by the Using Agency.
 3. The Using Agency will perform routine maintenance as described in the Manufacturers Standard Operation and Maintenance manuals during the warranty period. Using Agency performance shall in no way invalidate said warranties.
- B. Installer's Warranty: Furnish installer's written workmanship warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 1 year from date of operational acceptance by the Using Agency.

1.9 COORDINATION AND UTILITIES VERIFICATION

- A. Utilities and connections may vary between approved manufacturers. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
1. All utilities for these items are indicated in mechanical and electrical documents, the Equipment Schedule, and are referenced in Divisions 20, 21, 22, 23 and 26. Any deviations from these utilities must be documented within bid and shop drawing submittals.
 2. The Contractor is responsible for verifying field conditions, final services, connections and locations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers/Fabricators and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers/fabricators listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers/fabricators offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
- C. Basis of Design: As indicated in schedule on the drawings. If no schedule, then the first manufacturer listed in each Article shall be the basis of design.

2.2 PERFORMANCE REQUIREMENTS

- A. Design Intent: Drawings and Specifications indicate design intent for products and systems and do not necessarily indicate or specify total Work required and shall not be construed as an engineered design. Furnish and install all Work required for a complete installation.
- B. Coordination of Contract Documents and Work:
1. Product Variations: In the event of minor differences between products and systems of acceptable or available manufacturer/fabricators, Contractor shall notify Architect of such differences and resolve conflicts in a timely manner. Failure of Contractor to provide notification shall be construed as acceptance of conditions indicated, and changes caused by minor differences between products and Contract Documents shall be included in the Work at no additional cost to Owner.

2. Allowable Adjustments: Minor dimension and profile adjustments may be made in interest of fabrication or erection methods or techniques or ability to satisfy design intent, provided design intent is maintained as determined by Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including related design or construction cost impacts. If accepted by Architect, deviations causing changes in materials, constructability, substrates, or conditions shall be included in the Work at no additional cost to Owner.

2.3 CABINET, TALL CORROSIVE AND/OR BASE STORAGE (T__N AND/OR T__B)

- A. Acceptable Manufacturers:
 1. Justrite Manufacturing Company, L.L.C.
 2. Eagle Manufacturing Company.
 3. Securall.
- B. Capacity:
 1. 17 gallons (83 liters) - 43 inches (591 mm) wide by 18 inches (455 mm) deep by 24 inches (1650 mm) high (piggyback version).
 2. 22 gallons - 23.25 inches wide by 18 inches deep by 65 inches high.
 3. 45 gallons- 43 inches wide by 18 inches deep by 65 inches high.
 4. 110 gallons- 59 inches wide by 34 inches deep by 65 inches high.
- C. Design: Construct cabinet in accordance with OSHA Regulations and the requirements of International Fire Code, Chapter 50 Hazardous Materials. Provide cabinets Factory Mutual (FM) approved or Underwriters Laboratories (UL) listed or as constructed below.
- D. Casing: Bottom, top, back, door, and sides of cabinet, minimum 18 gage sheet steel, double walled with 1-1/2 inches air space. Rivet or weld joints airtight. Provide with adjustable zinc plated leveling legs.
- E. Door: Provide with continuous piano hinge and a 3-point latch arrangement with door sill raised at least 2 inches above the bottom of the cabinet to retain spilled liquid within the cabinet. Provide self-closing self-latching door(s) with fusible link(s) to hold doors wide open and melt at 74 degrees Celsius for automatic closure. Provide with keyed lock.
- F. Ventilation: Provide a 2 inches threaded vent connection on each side of the cabinet for supply and exhaust ventilation air. Provide flame arrestors at supply and exhaust connections to cabinet.
- G. Shelving: Provide with three 18 inches deep, full width adjustable shelves. Provide each shelf with 1/4-inch thick heat welded, polypropylene or ABS plastic pan, liquid tight, removable, 1 inch deep.
- H. Liner: Provide cabinet with ChemCor thermoplastic coating on all interior surfaces as provided on the Justrite Centura line or similar.
- I. Identification: Mark all corrosive storage cabinets with conspicuous red lettering on a contrasting background: HAZARDOUS—KEEP FIRE AWAY.
- J. Color: Dark blue.
- K. Finish: Provide as specified for Metal Finishes in Section 123553.

2.4 CABINET, TALL FLAMMABLE STORAGE (T__F)

- A. Acceptable Manufacturers:
 1. Justrite Manufacturing Company, L.L.C.
 2. Eagle Manufacturing Company.
 3. Securall.

- B. Capacity:
 - 1. 22 gallons - 23.25 inches wide by 18 inches deep by 65 inches high.
 - 2. 45 gallons- 43 inches wide by 18 inches deep by 65 inches high.
 - 3. 110 gallons- 59 inches wide by 34 inches deep by 65 inches high.
- C. Design: Construct cabinet in accordance with OSHA Regulations and the requirements of NFPA 30, National Fire Protection Association, Flammable and Combustible Liquids Code.
- D. Casing: Bottom, top, back, door, and sides of cabinet shall be at least 18 gage sheet steel, double walled with 1-1/2 inch air space. Joints shall be welded airtight. Provide with adjustable zinc plated leveling legs.
- E. Door: Provide with continuous piano hinge and a 3-point latch arrangement with door sill raised at least 2 inches above the bottom of the cabinet to retain spilled liquid within the cabinet. Provide self-closing self-latching door(s) with fusible link(s) to hold doors wide open and melt at 74 degrees Celsius for automatic closure. Provide with keyed lock.
- F. Ventilation: Do not ventilate cabinet unless required by local authorities. Seal vent openings with plugs, supplied by the manufacturer.
- G. Shelving: Provide with three 18 inch deep, full width adjustable shelves.
- H. Grounding: Provide a grounding lug connection at lower right side of cabinet.
- I. Identification: All flammable storage cabinets shall be marked with conspicuous red lettering on a contrasting background: FLAMMABLE—KEEP FIRE AWAY.
- J. Color: Yellow.
- K. Finish: Provide as specified for Metal Finishes in Section 123553 except interior shall be triple epoxy coated.

2.5 DRYING RACK (DR3024)

- A. Available Manufacturers:
 - 1. Mod-Rack by Inter-Dyne; Model V3024.
 - 2. Or Equal (No Known Equal).
- B. Body: One-piece, 20 gage, Type 304 stainless steel with a Number 4 finish. Provide top with two 90 degree bends and sides with one 90 degree bend. Bottom shall have two 90 degree bends to provide an integral drip trough and catch drain. Provide front with a multiple of T-shaped holes to accommodate pegs.
- C. Pegs: Injection molded white polypropylene, 1/2 inch diameter by 6 inches long. T-shaped protrusion on base of pegs shall allow easy removal and replacement without need for tools. Design T-shaped holes to fit protrusion on support pegs for holding single or multiple utensil drip trays, drain shelves, funnel racks, or pipette holders. Provide five 2-3/4 inch peg extenders for each drying rack.
- D. Drip Trough: 4 inch wide, 20 gage, Type 304 stainless steel with a 3/8 inch OD stainless drain tube and a stainless steel screen insert. Screen; 16 gage, 14 by 14 mesh, 0.025 wire. Provide with a 3/8 inch ID flexible drain tube minimum of 30 inches long.
- E. Provide with hanger to allow removal and replacement of entire rack for cleaning without need for tools.
- F. Finished Backs: Provide with all units not mounted on walls. Fabricate from 20 gage, Type 304 stainless steel with a Number 4 finish.

2.6 DRYING RACK, BENCH TOP MOUNTED (DRBT)

- A. Available Manufacturers:
 - 1. Heathrow Scientific Global, Model HS23243A.
 - 2. Or Equal (No Known Equal).
- B. Description: Self-supporting, spot-welded HDPE-coated steel wire with polystyrene tray and back. Provide with removable bottom drainage pan.

2.7 ICE MACHINE, UPRIGHT (MQ-04)

- A. Acceptable Manufacturers:
 - 1. Scotsman Ice Systems; Model F0522 & Bin B842S.
 - 2. Hoshizaki Europe B.V.; Model F-500BAJ.
 - 3. Manitowoc Ice; Model UFP0200A.
- B. Size:
 - 1. Machine: 21 inches wide by 22 inches deep by 22 inches high.
 - 2. Storage Bin: 48 inches wide by 32 inches deep by 40 inches high.
- C. Description: Air cooled compressor/condenser, flake ice machine with storage bin. Storage bin to include four legs and bin top.
- D. Capacity: Ice making capacity of 450 pounds in 24 hours. 1/2 horsepower with a bin storage capacity of 500 pounds.
- E. Finish: Provide all units in stainless steel.
- F. Electrical: 120/60/1, 15 amp. Provide with grounded cord and plug.

2.8 POINT EXHAUST (PE-01 AND PE-01a)

- A. Available Manufacturers:
 - 1. Movex Inc.; Model; 3MiniTEX 1500 with dome hood MK 350.
 - 2. Nederman; Model; FX2 100 Original.
 - 3. Airflow Systems Inc.; Model; E-Z ARM II.
- B. Description: 3 inches diameter by 60 inches long self-supporting telescopic arm.
- C. Construction: Aluminum tubes connected with jointed elbows. Provide internal stainless steel support spring as recommended by the manufacturer. Provide arm with polypropylene mini hood and clear combi hood with outside dimension of 15-inch by 18-inch, and external collar for duct coupling. Provide connection to existing ductwork which will allow an unrestricted 360-degree movement of the arm.
- D. Jointed Elbows: Provide polypropylene with glass fiber reinforcement with 90-degree radius elbows and knurled adjusting knobs supported by ball bearings. The two outermost elbow joints shall rotate and swivel through 360-degrees. Provide adjustable external locking rings at each joint.
- E. Inlet Hood: Provide with 14 inch diameter clear dome hood inlet hood.
- F. Mounting bracket: Provide a wall or ceiling mounting bracket for each point exhaust. Mount so the bottom of upper jointed elbow is at 6 foot, 6 inches above the floor, to provide full service at desktop level.

- G. Air flow control: Any such device on the point exhaust arm such as a manual damper that restricts or stops allows air flow through the point exhaust arm is not acceptable. This device must be removed.
- H. Finish: Epoxy powder coated white.

2.9 POINT EXHAUST, ATOMIC ABSORPTION UNIT (PE-02)

- A. Available Manufacturers:
 - 1. Movex Inc.; Model; MEX-AAF.
 - 2. Airflow Systems Inc.; Model; Custom High Temp E-Z ARM II Stainless Steel.
 - 3. Or Equal (No Known Equal).
- B. Telescopic design with a 4 inch diameter sliding into a 5 inch diameter by 43 inches long extended self supporting arm. Tube and 10 inch diameter conical hood type 316L stainless steel, supporting bracket mild steel epoxy powder coated white. Sliding lining material PTFE, adjustable friction locking device.
- C. Flexible Duct: High-Temp Aluminum-coated glass fabric flexible duct, 6 inches diameter with a temperature range of -200 degrees to +1,000 degrees Fahrenheit. Basis of Design: McMaster-Carr Number 45825K74.
- D. Inlet Hood: Provide with 10 inch by 19 inch rectangular metal inlet hood.
- E. Mounting bracket: Provide an adjustable wall mounting bracket for each point exhaust. Mount so the bottom of upper pivot joint connector is at 6 foot, 6 inches above the floor, to provide full service at desktop level.
- F. Air flow control: Any such device on the point exhaust arm such as a manual damper that restricts or stops allows air flow through the point exhaust arm is not acceptable. This device must be removed.

2.10 SINK, HAND WASH (LSK-04)

- A. Acceptable Manufacturers:
 - 1. Just Manufacturing Company; Model A-33338.
 - 2. Elkay Manufacturing Company; Model ELVWO2219.
 - 3. StainlessUSA – Blue Steel, LLC; Model HS.
- B. Nominal Size: 20 inches long by 18 inches wide by 5 inch deep.
- C. Construction: Stainless steel wash up sink with ledge back, self rimmed lavatory of 18 gage, Type 304, steel. Rectangular compartment shall have radius coved corners. All exposed surfaces hand blended to a uniform satin finish. Underside sound dampened. Sink to be furnished with overflow, strainer and tailpiece.
- D. Refer to Drawing for location, type and number of fittings

2.11 BACKDROP ORGANIZER (MQ-02)

- A. Acceptable Manufacturers:
 - 1. Stacker Original. Model: White
 - 2. Or Equal (No Known Equal)
- B. Nominal Size: 20 inches wide by 14 inches deep by 10 inches high
- C. Description: Laser cut, powder coated steel divided into four even compartments that hold three backdrops in each compartment.

- D. Refer to Drawing for location, type and number of units.

2.12 BUILT-IN TRANSPARENCY VIEWER WITH CONTROL BOX (MQ-03)

- A. Acceptable Manufacturers:
 - 1. GTI Graphic Technology. Model: GraphicLite Recessed Viewer RVA-44 & LiteGuard Control Box LG-III
 - 2. Or Equal (No Known Equal)
- B. Nominal Size: 49 inches wide by 21 inches deep by 5 inches high
- C. Description: Built-in transparency viewer consting of acrylic faceplate, reflector assembly complete with Graphiclite tubes and line cord, two side reflectors. The LiteGuard control box sits on the counter top and controls the viewer. The RVA cord routes through the bench top gromment into the back of the LiteGuard and then the LiteGuard is plugged into a wall outlet.
- D. Refer to Drawings for location and details.

2.13 OVERHEAD SINGLE-HEAD LIGHT WITH CAMERA (MQ.08)

- A. Acceptable Manufacturers:
 - 1. Steris. Model: Harmony Air A-Series Surgical Light, Camera Ready Single Head, with 4K In-light Camera
 - 2. Getinge. Model: PowerLED II Surgical Light, Camera Ready Single Head, with 4K In-light Camera
 - 3. Stryker. Model: Oculan Surgical Light, Camera Ready Single Head, with 4K In-Light Camera
- B. Nominal Size: Nominal 43 inch length with 27 inch drop tube.
- C. Description: Single surgical light, LED technology with white or variable color lighting control with integral 4K in-light camera and integrated wall control. Aluminum construction with suspension system, spring arm with continuous braking and light head. Provide structural mounting.
- D. Electrical: 120 volt, Single Phase, with dedicated breaker and ground and all interconnected wiring between light and wall control.
- E. Data: Include interconnected cabling for transmission of images to adjacent labs.
- F. Refer to Drawings for location

2.14 SAFETY GLASS HOLDER WITH DOORS, WALL MOUNTED (MQ.01)

- A. Acceptable Manufacturers:
 - 1. Sellstrom / SureWerx USA, Inc. Model Monitor 2000 Germicidal Cabinet
 - 2. Carolina Biological Supply Company Model 646846
 - 3. Flinn Scientific Model SE1000
- B. Nominal Size: 25 inches wide by 32 inches tall by 10 inches deep.
- C. Description: 22 gauge metal cabinet construction with enameled finish and keyed lock. Includes 8 shelves each holding 5 goggles or 6 safety glasses. Provide UV lamp with 5 minute timer with pilot light switch and automatic shut-off if doors are opened. Wall mounted with 7 foot grounded cord and plug.
- D. Electrical: 120 volt, Single Phase, 5 amps.

- E. Refer to Drawings for location.

2.15 SINGLE ADJUSTABLE MONITOR ARM (MQ.09)

- A. Acceptable Manufacturers:
 - 1. Mount-It: Model MI-6352 LT Single-Arm Laptop Desk Mount
 - 2. ATDEC: Model AWMS-NDB
 - 3. Ergotron: Model LX
- B. Description: Single-arm, height adjustable, 360 degree swivel, 90 degree tilt with vented tray for laptops up to 17 inches and 13 pounds. Arm is gas spring with concealed cord management and bolt-through grommet mounting. Laptop tray has traction pads and tabs with locking buckles. Full arm extends to 23.5 inches to comply with accessible reach ranges.
- C. Finish: Black.
- D. Refer to Drawings for location and type.

2.16 DUAL ADJUSTABLE MONITOR ARM (MQ.10A & MQ.10B)

- A. Acceptable Manufacturers:
 - 1. Mount-It:
 - a. MQ.10A: MI-6352 LTMN Dual-Arm with (2) MI-3773B_G10 Anti-theft Tablet Holders
 - b. MQ.10B: MI-6352 LTMN Dual-Arm with (2) MI-2352T Laptop Holders
 - 2. ATDEC: Model AWMS-NDB
 - 3. Ergotron: Model LX
- B. Dual-Arm: Arms are height adjustable, 360 degree swivel, 90 degree tilt, gas springs with concealed cord management and bolt-through grommet mounting. Each arm has a full arm extension to 23.5 inches to comply with accessible reach ranges.
- C. Description Tablet Holder: Adjustable anti-theft VESA mount for iPad generations 7 through 10, iPad Air and iPad Air Pro.
- D. Description Laptop Holder: VESA mount vented tray for laptops up to 17 inches and 13 pounds. Laptop trays have traction pads and tabs with locking buckles.
- E. Finish: Black.
- F. Refer to Drawings for locations, and types.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: Perform Work according to following, unless otherwise specified:

1. Respective manufacturer/fabricator's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.
- C. Coordinate delivery of all equipment with building work and scheduling for final placement.
- D. Check project for conditions that affect work. Do not begin installation until unsatisfactory conditions are corrected.
- E. Anchor laboratory equipment securely in place with appropriate seismic tie-down kits, in accordance with design calculations and requirements.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.

3.4 INSTALLATION

- A. Miscellaneous laboratory equipment shall be installed in strict accordance with the manufacturer's recommendations, including recommended operating and servicing clearances.
- B. Plumbing hookups under Division 22.
- C. Mechanical hookups under Division 23.
- D. Electrical hookups under Division 26.

3.5 ADJUSTING

- A. Touch up damaged finishes equal to original condition as approved
- B. Repair or remove and replace defective work as directed by Architect upon completion of installation.
- C. Adjust moving or operating parts to function smoothly.

3.6 CLEANING AND PROTECTION

- A. Clean shop finished equipment, touch up as required, and remove and refinish damaged or soiled areas.
- B. Cover equipment for protection against soiling and deterioration during remainder of construction period.
- C. Equipment shall be protected before, during and after installation. Damaged materials due to improper protection shall be cause for rejection.

END OF SECTION 115300

SECTION 115313 - LABORATORY FUME HOODS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Benchtop Chemical Fume Hoods.
 - 2. Accessible Fume Hoods.
- B. Related Requirements:
 - 1. Section 123553 "General Requirements for Laboratory / Arts Casework and Fume Hoods" for references, coordination, submittal requirements, quality assurance, materials, hardware, finishes, installation, etc.
 - 2. Division 22: Furnishing and installation of plumbing utilities and final connections to fume hoods.
 - 3. Division 23: Furnishing and installation of exhaust duct work and equipment, and final connection of fume hoods.
 - 4. Division 23: Furnishing and installation of exhaust controls and final connections to hoods.
 - 5. Division 23: "Testing, Adjusting, and Balancing for HVAC" for field quality-control testing of fume hoods.
 - 6. Division 26: Furnishing and installation of electrical utilities and final connections to fume hoods.

1.2 DESIGN REQUIREMENTS

- A. Comply with SEFA 1 "Laboratory Fume Hoods."
- B. Factory UL 1805 Classified. Provide each fume hood with UL 1805 Classified labeling.
- C. Fume hoods shall function as ventilated, enclosed workspaces, designed to capture and confine exhaust fumes, vapors and particulate matter produced or generated within the enclosure.
- D. Manufacturers to provide high performance fume hoods. Hoods which achieve a reduction in volumetric flow by restricting the sash opening area do not qualify as High Performance fume hoods unless they also meet the performance requirements through the maximum sash opening. The "maximum sash opening" shall be considered a vertical sash opening not less than 25 inches high off the fume hood work surface.
 - 1. High Performance Fume Hoods are hood designs that provide a reduction in the required exhaust air volume, when compared to the volume required for the same size fume hood to operate with a face velocity of 100 FPM through a fully opened vertical sash and provides containment levels equivalent or superior to ASHRAE 110 tracer gas test ratings of 4.0 AM 0.05, and 4.0 AI/AU 0.10, with a face velocity of 60 FPM or less through the fully opened vertical sash.
- E. Design fume hoods for consistent and safe air flow through the hood face. Negative variations of face velocity shall not exceed 10 percent of the average face velocity at any designated measuring point as defined in this section.
- F. Average illumination of work area: Minimum 80 foot candles. Work area shall be defined as the area inside the superstructure from side to side and from face of baffle to the inside face of the sash, and from the working surface to a height of 28 inches.
- G. Maximum average static pressure loss readings taken three diameters above the hood outlet from four points, 90 degrees apart not to exceed:

Face Velocity (FPM)	Measured Static Pressure Loss (WG)
75	0.18 inches
100	0.30 inches

125	0.45 inches
150	0.60 inches

- H. Fume hoods shall be constructed in such a manner as to cause no perceptible increase in sound pressure level over the mechanical exhaust system.
- I. Fume hood to have set baffle system. No manually adjustable baffles allowed.

1.3 ACTION SUBMITTALS

- A. Refer to Section 123553 and as noted below.
- B. Product Data: Submit manufacturer's data for each item. Include component dimensions, configurations, construction details, and attachments. Indicate location, size, and service requirement for each utility connection.
- C. Shop Drawings: Include the following:
 - 1. Indicate locations and types of service fittings together with associated service supply connection required.
 - 2. Indicate duct connections, electrical connections, and locations of access panels.
 - 3. Include layout of fume hoods in relation to lighting fixtures and air-conditioning registers and grilles.
 - 4. Indicate details for anchoring fume hoods to permanent building construction including locations of blocking and other supports. Include calculations demonstrating that anchorages comply with seismic performance requirements.

1.4 INFORMATIONAL SUBMITTALS

- A. Refer to Section 123553 and as noted below.
- B. Certifications: All manufacturers to test and certify their products to meet UL1805, ASHRAE 110 and SEFA 1.
- C. Test Reports: Submit complete reports verifying conformance to performance standards outlined in this specification when tested to the ASHRAE 110 Standard in the "As Manufactured" environment.

1.5 CLOSEOUT SUBMITTALS

- A. Refer to Section 123553 and as noted below.
- B. Operator Training Guide: Provide an electronic training presentation, highlighting the proper operating practices of the laboratory fume hood.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers/Fabricators and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers/fabricators listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
 - 1. Air Master Systems Corporation.
 - 2. ICI Scientific.
 - 3. Kewaunee Scientific Corporation.
 - 4. Mott Manufacturing Limited.

- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers/fabricators offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
- C. Furnish and install casework, fume hoods, furnishings and equipment specified in the following sections by the same supplier.
 - 1. Section 123553 "General Requirements for Laboratory / Arts Casework and Fume Hoods."
 - 2. Section 123553.13 "Stainless Steel Laboratory Casework."
 - 3. Section 123553.19 "Wood Laboratory and Arts Casework."
 - 4. Section 115300 "Miscellaneous Laboratory Equipment."
 - 5. Section 115313 "Laboratory Fume Hoods."

2.2 MATERIALS

- A. Refer to Section 123553.

2.3 BENCH TOP CHEMICAL FUME HOODS

- A. Superstructure:
 - 1. Wall: Rigid, self-supporting double wall assembly, nominally 5 inches thick. Double wall shall consist of a sheet steel outer shell and a corrosion resistant inner liner and shall house and conceal steel framing members, attaching brackets and remote operating service fixture mechanisms and services. Hoods shall be completely factory assembled to form a rigid, self-supporting structure.
 - 2. Face Opening Perimeter Edge: Air foil or streamlined shape with all right-angle corners radiused or angled.
 - 3. Interior Hood Height: 48 inches minimum to hood roof.
 - 4. Bypass: Low resistant down draft type. Bypass air shall enter at horizontal full length opening at the top front superstructure to enter hood in a down flow direction. Directional louvers are not acceptable. Material to match fume hood interior liner.
 - a. Restricted Bypass: Provide on all variable volume or constant volume hoods with combination sashes and on all variable volume hoods with a vertical rising sash.
 - 5. Ceiling Enclosure Panel: Used to enclose space between top of fume hood and ceiling on all exposed or open sides. Minimum 18 gage thick, finish to match hood. Extend to within 1 inch below ceiling for suspended ceiling to continue over fume hood enclosure panels for a finished look. Provide a lower removable front panel for access to hood lights, piping and exhaust duct connections.
 - 6. Interior and Exterior Fastening Devices: Conceal all devices. Exposed screws not acceptable. Unexposed structural member attachments: sheet metal screws, zinc plated.
- B. Sill Airfoil:
 - 1. Bypass type designed to prevent reverse air flows or air eddies at the fume hood work surface. Low profile, flush with work surface, notched or hinged to allow pass-through of hospital grade electrical plugs. Sill to include an integral spill trough for secondary containment. Provide a chemical resistant sealant between sill and work surface.
 - 2. Material: All components 16 gage thick Type 316 stainless steel, with an acid and abrasion resistant electrostatic epoxy or urethane powder coating.
- C. Sash:
 - 1. Full view type with clear, unobstructed, side to side view of fume hood interior and service fixture connections. Vertical rising or combination vertical rising/horizontal sliding. Refer to Fume Hood Schedule for type and height of sash at each fume hood.

2. Sash shall be aerodynamically designed, all stainless-steel components with chemically resistant polyurethane powder coat finish, with either frameless vertical rising style or combination style with both vertical and horizontal moving glass panels.
 3. Vertical Rising Sash: Provide sash stops at the design sash opening.
 4. Counterbalance system: Single weight, pulley, cable or chain and sprocket, counter balance system shall prevent sash tilting and permit one finger operation at any point along full width pull. Design system to hold sash at any position without creep and prevent sash drop in the event of cable failure. Sash and counterbalance mechanism to be life cycle tested to withstand a minimum of 100,000 cycles without signs of fatigue. Open and close sash against rubber bumper stops.
 5. Sash glass: 7/32-inch thick laminated safety glass.
 6. Sash guides: Corrosion resistant polypropylene.
- D. Automatic Sash Closure Mechanism:
1. Provide by fume hood manufacturer and install in fume hood manufacturing facility. Pre-wire mechanism to the top of the fume hood along with other electrical devices on the hood.
 2. Automatically closes sash to fully closed position using infrared occupancy sensor with user-programmable time-delay. Programmable in one second increments. Set delay to 30 minutes.
 3. Electrically actuated mechanism designed to engage both sides of the sash evenly to ensure smooth sash movement. Mechanism to utilize no more than 1 amp AC when actuated.
 4. Incorporate infrared light curtain detection system which stops the sash from closing and turns on a red obstruction indicator light. Infrared light curtain must detect any obstruction in the path of the sash from full-open to full-close. Provide with red obstruction indicator light that will turn off when reset button is pressed. Provide additional switch to engage and disengage the sash operator.
- E. Liners: Fiberglass reinforced polyester panel, 1/4 inch thick, smooth finish and white color in final appearance. Flame spread: 25 or less per UL 723 and ASTM E84-80. Manufactured by WS Hampshire Inc. "Wesliner 1125" or equal. Provide gasketed access panels in the liner for access to valves and fixtures. Panels shall be of the same material as the liner and be provided with a PVC gasket to eliminate air leakage and retain liquids inside the hood.
- F. Baffles: Provide fixed baffles to control air vectors into and through the fume hood. Fabricate of the same material as the liner. All baffle supports and brackets to be non-metallic. Baffle designs which permit close off of all slots are not acceptable.
- G. Work Surfaces: Molded epoxy resin 1-1/4 inches thick surface, dished 1/4 inch to contain spills. Refer to Section 123553
- H. Sinks: Where indicated on the drawings provide epoxy resin cup sinks as specified in Section 123553.
- I. Service Fixtures and Piping:
1. Factory pre-pipe hoods compliant to all state and local codes with services indicated on the drawings, to a point of connection 2 inches above hood roof. Provide, per Division 22 the piping material and installation of each service type. Pressure test all pre-piped lines in the factory.
 2. Provide service fixtures within fume hoods with color coded, acid and solvent resistant plastic coating, applied over fine sandblasted surface, properly cleaned then sprayed and baked three times. With a minimum coating thickness of 6 mil.
 3. Control Valves: Straight or 45 degree angle mounted fixtures on the front panel of the fume hood. Provide panel mounted or rod-type control valves with a threaded collar to hold the valve in place.
 4. Color coding of hood interior service fixtures and remote-control valves as specified for Laboratory Service Fixtures in Section 123553.
 5. On fume hoods with pre-punched service fixture holes, provide metal or plastic plugs in color to match fume hood, for all unused holes.
- J. Electrical:

1. Factory install receptacles, lighting, electrical fixtures and wiring in accordance with all applicable state and local codes and Division 26 specifications. Terminate wiring in a single service junction box on top of fume hood roof for in-the-field point of connection. All electrical fixtures shall be UL listed and labeled.
 2. Wiring: Minimum #12 copper, type THHN/THWN insulation. Wire color coding shall be black for current carrying conductors, white for neutral conductors and green for ground conductors.
 3. Conduit: Unless noted or required otherwise, ½ inch flexible metal or PVC conduit. Secure conduit to superstructure framework with conduit clamps. Conduit to light fixture to have a pigtail for ease of lamp maintenance.
 4. Receptacles: Provide each hood with the receptacle quantities as follows:
 - a. For 48 inch wide hoods: Provide one duplex receptacle at each side post near the bottom. Provide one circuit per hood assembly.
 - b. For 60 inch wide and greater hoods: Provide two duplex receptacles at each side post near the bottom. Receptacles on each side shall be wired alternately. Provide two circuits per hood assembly.
 - c. Provide grounding wire to all under-counter flammable storage cabinets.
 - d. Receptacle: NEMA-5-20R, three wire grounding type receptacles rated at 120 VAC at 20 AMP with Ground Fault Interruption, Gray in color with stainless steel brushed finish flush face plate. Install receptacles with the ground outlet above the power slots. Label each receptacle with the associated panel and circuit number.
 5. Lighting:
 - a. Fixture: LED, UL listed light fixture with 15 intensity adjustment levels and 3 color options installed on exterior of fume hood roof. Provide light fixture isolated from the hood interior by 1/4 inch thick laminated safety glass cemented and sealed to the hood roof. The lighting shall be serviceable from outside the fume hood interior. Color temperature of fume hood lighting to match color temperature for general room lighting.
 - b. Illumination: Minimum 80 foot candle at the full intensity setting at the worksurface.
 - c. Light Switch: Toggle type, single pole 120 VAC, 20 AMP, Gray in color with stainless steel brushed finished flush face plate. Mount on left side of fume hood side post
- K. Exhaust Outlet:
1. Rectangular or round bell mouth collar; 18 gage thick, Type 316 stainless steel.
 2. For hoods with rectangular duct collars, provide exhaust duct transition from the hood rectangular exhaust collar to the building exhaust system round duct connection. Round duct size as indicated in the Fume Hood schedule. Contractor shall coordinate between trades. Fabricate transition of the same material as the exhaust outlet.
- L. Fume Hood Signage:
1. Operation Instructions: Provide a permanent acid resistant decal or plate attached to fume hood exterior with condensed information covering recommended locations for apparatus and accessories, baffle settings, use of sash, and recommended safe operating procedures.
 2. Vertical Sash Stop Decal: Provide an acid resistant decal as detailed on the Drawings. Exact location to be determined when the fume hood is balanced.
 3. Fume Hood Information/Certification Holder: Provide a 4 inch by 6 inch corrosion resistant metal or plastic frame attached to front face of fume hood exterior with plastic or glass glazing to contain a removable data card to identify hood and show hood characteristics and field test data.
- M. UL Label: Clearly visible label affixed to hood front identifying fume hood as UL Classified. List the UL file number for verification of UL Classification.
- N. Safety Monitor/Alarm System:
1. Variable volume hoods: Equip each fume hood with a velocity control and safety alarm unit which is provided under Division 23. Provide factory cut outs in the front of the hood for field mounting of the unit. Coordinate location and size of cut out with Division 23. Connection of control and safety alarm unit to sensors and control valves under Division 23.

2.4 ACCESSIBLE BENCH TOP CHEMICAL FUME HOODS

- A. Accessible bench top chemical fume hoods shall be as detailed on the Drawings and as described under Article 2.4, Benchtop Chemical Fume Hoods, unless modified under this Article.
- B. Service Fixtures: Mount on fume hood side posts. Top-most service fixture handle to be no higher than 48 inches above finished floor. Fixture outlet within fume hood to be within 20 inches of the front face of the fume hood.
 - 1. Service fixture handles exceeding 48 inch reach range to be located in cabinet apron below fume hood with those services pre-piped between the handle and the outlet.
- C. Light Switch: Mount on fume hood side post no higher than 48 inches above finished floor.

2.5 METAL FINISH FOR FUME HOOD

- A. Refer to Section 123553.

2.6 SOURCE QUALITY CONTROL TESTING OF EPOXY RESIN WORK SURFACE

- A. Refer to Section 123553.

2.7 SOURCE QUALITY CONTROL TESTING OF POLY RESIN LINER

- A. Test Procedure:
 - 1. Test Number 1 - Spills and Splashes:
 - a. Suspend in a vertical plane a 42 inch horizontal by 12 inch vertical panel divided into 3/4 inch wide vertical columns.
 - b. Apply 5 drops of each reagent listed with an eye dropper.
 - c. Apply liquid reagents at top of panel and allow to flow down full panel height. "CAUTION! Flush away any reagent drops."
 - 2. Test Number 2 - Fumes and Gases:
 - a. Divide 24 inch by 12 inch panel into 2 inch squares.
