# Solar Optimization

## What does Optimization Include?

**Panel Thermal Imaging · Amperage/Voltage Checks · V-Curve Testing · Retorque all connections · Inverter Servicing · Firmware Updates · Testing all internal Components · Safety Compliance · Infrared Testing of connections**

**By Optimizing Carport/Rooftop Solar Panel Arrays through Preventive Maintenance, "Tuning", 24/7 Monitoring, Cleaning and Repair, ROI is Leveraged and output is increased saving escalating electricity costs in \$10's of thousands annually**

**By selling solar RECs into the state's Low Carbon Fuel Standard (LCFS) program, Solar Optimization further leverages transportation fuel producers need to buy solar RECs to offset their carbon intensity.**
